Parliament Buildings,
Toronto, July 14th, 1941.

TO THE HONOURABLE ALBERT MATTHEWS,
Lieutenant-Governor of the Province of Ontario.

MAY IT PLEASE YOUR HONOUR:

The undersigned has the honour to transmit to Your Honour the Seventy-first Annual Report on the Hospitals and Sanatoria of the Province of Ontario, for the year which ended December 31st, 1940, together with a similar report for the three months, October, November and December, 1939.

Respectfully submitted,

HAROLD J. KIRBY,
Minister of Health.

Parliament Buildings,
Toronto, July 14th, 1941.

THE HONOURABLE HAROLD J. KIRBY, K.C.,
Minister of Health.

SIR:

I have the honour to submit to you the Seventy-first Annual Report on the Hospitals and Sanatoria of the Province of Ontario, for the year which ended December 31st, 1940, together with a similar report for the three months, October, November and December, 1939.

I have the honour to be, Sir,

Your obedient servant,

C. J. TELFER,
Inspector of Hospitals.

Hospitals

Herein is presented a detailed report on General, Red Cross and Convalescent Hospitals, Hospitals for Incurables and Sanatoria for Consumptives, operating in the Province of Ontario, as compiled from the Financial and Statistical Statements submitted for the year which ended December 31st, 1940.

There were 176 institutions in operation and participating in Provincial grants during the year. These are classified as follows:

117 General Hospitals	4 Convalescent Hospitals
30 Red Cross Hospitals	3 Convalescent Summer Camps for Children
8 Hospitals for Incurables	13 Sanatoria for Consumptives

The number of patients, together with the number of days' treatment, is indicated in the summary on the opposite page. In Public General Hospitals, exclusive of Red Cross Outposts, there was an increase in the number of patients treated of 23,770 over the previous year, and an increase of 223,111 days' treatment. The average number of patients in hospital daily was 10,476, or 582¹/₂ more than the previous year.

Operating costs increased by \$826,178.61 over the previous year. The following revenue increases and decreases are noted:

From patients, increased.....	\$1,511,454.38
From investments, increased.....	49,497.77
From donations, decreased.....	56,283.86
From municipalities, decreased.....	327,636.24
From Provincial Government, decreased.....	152,359.07

The net increase in revenue for the year amounted to \$1,080,662.69.

During the year the Sisters of St. Joseph of the Diocese of Sault Ste. Marie acquired the Red Cross Hospital at Blind River; transfer was effected on August 17th, 1940.

Executives and officers of the several institutions reported herein are requested to study the various tables comparing their hospitals with those of similar size and capacity.

On page 28 of this report will be found information concerning the 63 private hospitals licensed during the year under report.

C. J. TELFER,
Inspector of Hospitals.

**CONSOLIDATED STATEMENT GIVING CERTAIN STATISTICAL AND
FINANCIAL INFORMATION**

TO THE HONOURABLE ALBERT MATTHEWS,

Lieutenant-Governor of the Province of Ontario.

MAY IT PLEASE YOUR HONOUR:

The undersigned has the honour to present the Annual Report upon the Prisons and Reformatories of the Province of Ontario for the year ending 31st March, 1941.

Respectfully submitted,

H. C. NIXON,

Minister.

HONOURABLE HARRY CORWIN NIXON,
Provincial Secretary of Ontario.

SIR:

Last year in presenting to you the reports on this branch of the service, I reported a small decrease in the number of persons committed and those sentenced. For the year ended March 31, 1941, on which I am now presenting statistics there was a further reduction of 2,200 and 916 respectively. Thus for the two years there has been a decrease from the all time high of 1939 of eleven per cent in the number committed and eight per cent in the number sentenced. The following table shows the number in all the years from 1913 forward.

Year ending September 30th	Approximate popula- tion of Ontario.	Persons Committed for Trial	Persons Sentenced to Prison
1913	2,767,000	19,250	11,897
1914	2,770,000	22,777	14,801
1915	2,788,000	20,337	12,663
1916	2,728,000	16,100	9,364
1917	2,750,000	12,445	7,867
1918	2,769,000	13,242	7,874
1919	2,821,000	13,096	7,904
1920	2,849,000	14,756	8,643
1921	2,934,000	16,800	9,790
1922	3,101,000	14,800	9,312
1923	3,035,000	13,995	8,036
1924	3,075,000	15,879	8,834
1925	3,115,000	18,023	11,306
1926	3,151,000	18,033	11,371
1927	3,176,000	20,578	13,927
1928	3,241,000	23,786	16,358
1929	3,285,000	25,980	17,626
1930	3,366,000	29,126	21,421
1931	3,432,000	26,358	18,127
1932	3,479,000	25,235	15,804
1933	3,510,000	22,484	14,538
1934	3,540,000	20,916	13,509
Year ending March 31, 1936	3,690,000	24,053	16,356
1937	3,711,000	27,592	20,618
1938	3,731,000	30,345	23,649
1939	3,750,000	34,914	27,926
1940	3,755,000	33,075	26,543
1941	—	30,875	25,627

Note: The fiscal year was changed in 1935 to end March 31.

A decrease in the number of prisoners was expected and forecast because of war conditions, in particular increased economic activity, with enlistment for active war service a contributing cause. The prison population in Ontario since this war commenced has, at a higher level, practically paralleled that for the same period of the 1914—1918 war.

Some ex-prisoners and some who otherwise would be potential prisoners have been absorbed by industry, the army, the navy and air force and these are probably the best of the whole group. Some of them will do well; approximately fifty per cent of our prisoners are below normal intelligence; only fifteen per cent or less have received any secondary education. Many are more or less unreliable,

but there are many others who will be useful citizens if they can be fitted into their proper niche in society.

The comparatively small decrease in the past two years clearly indicates that in general as yet, those who are inefficient, careless liverers and have disregarded the statutes are unwanted by industry and our war services. If and when all other man power sources have dried up and the demand continues, the story will probably be different and we may expect the same rapid decline in prison population which occurred in the last half of the previous war.

In the three of the four main classifications of crimes there were decreases in the number sentenced. These were crimes against the person, crimes against property and crimes against public order and peace. However, in the fourth, crimes against public morals and decency, there was a disquieting increase since last year from 576 to 843 (46 per cent). However, it should at the same time be noted that this group was only 31.4% of all the prisoners sentenced. This deplorable increase is likely a natural reaction to war and therefore temporary.

During the past two decades there has been increased failure in home training of children by parents. In the prosperous twenties (1920 to 1930) it was called the "Revolt of Youth". Certainly, many young people broke from home restraint and went wrong with the resultant rapid increase in our prison population. In the depression years, economic conditions had two effects. Most of our young people were up against stark, hard facts and that condition has produced a splendid, straight thinking and plain speaking generation. There has been, however, a minority who weaker or more unfortunate, unable to find work and their proper place in society, resorted to crime. All of us should henceforth take care that a proper programme of activity is arranged so our young people can do useful work and retain their self-respect.

Nature absorbs a vacuum and many social service organizations to some extent took up the work which parents were failing to do. Full credit should be given to all those citizens who earnestly and generally efficiently, took up the burden and much could be said of the work which they did in preventing crime and helping faltering youth. I refer to these facts because the need is still great and has been aggravated during the war by war conditions, including the absence of so many fathers.

The institutions caring for the prisoners operated efficiently. Good discipline was applied and training given. The great majority of the prisoners as usual, served their sentences obediently. As usual, the small minority who required extra discipline were chiefly young and previously undisciplined. As in the previous year there were frequent enlistments from our staffs to the war services. Replacements have been sufficient but are increasingly difficult as the available supply of potential officers is shrinking. Furthermore, those who might be otherwise eager to enter our service are aware that appointments now are temporary and will probably be filled when our enlisted officers return.

Because of war requirements, two more of our institutions, the Ontario Reformatory, Mimico, and the Industrial Farm, Monteith, were in July, 1940, transferred to the Federal authorities for the duration of the war. However, in

the Summer and Autumn we took off the crops of the Mimico farm with prison labour taken daily from the Toronto Gaol.

The temporary loss of these two institutions following the previous loss, also because of the war, of the Industrial Farm, Langstaff, forced us to concentrate our Reformatory prisoners in the Ontario Reformatory, Guelph, and the Industrial Farm, Burwash, including the latter's subsidiary, the road camps east of Longlac. This loss of institutions, to a large extent, disrupted our classification of prisoners. Our worst longer term repeaters are still sent to Burwash and its road camps and the others to Guelph. The great majority of prisoners, however, are given short sentences and serve them in the gaols.

The closing of the Mimico and Monteith institutions required agricultural re-adjustments. At both we had pure bred livestock which was the result of many years careful breeding. This was transferred to Guelph and Burwash and it was necessary to build additional barns. This was done by using prison labour to the fullest extent.

Farm crops generally were good and in spite of the wet harvest season, damage was small. It is necessary in the 1941 crop season to re-adjust various crop acreages chiefly in vegetables, to maintain continuity of supply to other institutions.

I wish to commend for your attention the attached reports from the Board of Parole and the Superintendents. Also I wish to commend them and other officials and officers for their loyal, efficient attention to duty and to express our appreciation of your guidance.

C. F. NEELANDS,

Deputy Provincial Secretary.

TORONTO, AUGUST 19, 1941.

Reformatories

THE ONTARIO REFORMATORY, GUELPH

May 26, 1941.

DEAR SIR:

The attached statistical report of the Ontario Reformatory, Guelph, covers the fiscal year ending March 31, 1941.

2,056 were committed to this Institution during the year, which is an increase in commitments of 695 over the preceding year. The total number in custody during the year was 2,899. Our average daily population for the year was 829.5, an increase of 105.54 over the preceding year.

578 admissions were under the age of twenty-one years. While this six year group, comprising the ages fifteen to twenty years, is the largest of any age group in custody here, it is 126 less in number than the same group for the preceding year. Enlistments and better opportunities for employment seem to be reducing the number of these lads getting into trouble.

264 of our commitments were convicted for the first time; 368 were convicted for the second time; 276 were convicted for the third time; 985 were convicted for more than the third time and 163 were convicted of non-indictable offences, which are not finger printed and thus no criminal record was available.

Leaving this group of 163 out of the total, we find our percentage group as follows:

Number convicted for the first time	13.94%
Number convicted for the second time	19.44%
Number convicted for the third time	14.58%
Number convicted for more than third time	52.04%
	100.00%

It is interesting to note the slight rise in those convicted for the second time and then the drop for those convicted for the third time. One might hazard an opinion that this is almost the final turning point. Either the inmate stops crime at this point or he goes on to become a definite recidivist and to belong to our large repeater group of 52% of our total commitments.

138 Industrial School boys were committed during the year, which is 34 less than in the previous year. 523 had been in this Institution at some time previously, 79 had served previous penitentiary sentences, 221 had been in other provincial or state reformatories and 482 had served gaol sentences.

Intelligence and educational tests were given to all inmates serving over three month sentences, 379 psychiatric examinations were made in the year by our Medical Officer. Our inmate population roughly falls into the following groups:

Mental defectives	19%
Dull normal intelligence	35%
Normal intelligence	46%

This division into these three groups does not attempt to give a picture of the attitude of any individual in any one of these groups to the great problem of RIGHT and WRONG. In the eyes of the law, the criminal is presumed to be as normal and sane as the non-criminal individual, though the law sees in his criminal activities the predominant behaviour of a particular individual; criminal psychopathology sees criminal behaviour as only one aspect of the life of the individual. The average citizen outside has been conditioned from childhood by pressure from all sorts of social, moral, cultural and religious forces, and he has no great difficulty in deciding what is right and wrong. He is not afraid of the law and does not come in conflict with it because his life agrees with the cultural demands of society. However, even the "average citizens" have many different conceptions of what is right and wrong. For example, this average citizen may be most honest in all his personal business dealings, but he may see no harm in cheating a large corporation.

The criminal has not been conditioned from childhood by the proper pressure of social, moral, cultural and religious forces and he has difficulty in deciding this question of right and wrong. He may be only wrong on certain of his concepts and it is quite the common thing for him to look with disgust on other criminals who commit acts which he would not be guilty of committing. Sexual offenders may be men of high moral fibre paradoxical as it may seem.

Our inmate rated as of normal intelligence may be a neurotic. He knows the difference between right and wrong but he gets himself in a maze of conflicts and is unable to make the choice which is accepted by society. After the deed is done he has a strong feeling of remorse, but the law only sees his factual behaviour.

Our inmate rated as normal or of superior intelligence often is a psychopath. He does not use his intelligence for socially useful purposes. He behaves like the mental defective, as if he lacked intelligence, but perhaps what is most important he has no *feeling* whatever for right or wrong. He has remorse only for himself, when he is caught, but does not feel any guilt. The psychopath lacks moral sense.

The mental defective must be looked upon as an individual with limitations of intelligence. He is unable to understand right and wrong, and so the promptings of his conscience are very dull or absent entirely. Mental deficiency does not preclude the possibility of his grasping the concept of right and wrong, it only limits the concept. He also may have coexistence of neurosis, psychosis or psychopathy. In the mental defective, punishment cannot increase his intelligence and so his grasp of the situation remains the same. After he has served his sentence he is just as likely to indulge in criminal behaviour as before because the punishment has not reached the source of his criminality nor can it improve the intelligence back of it.

The psychopath lacking the sense of right and wrong, but with a complete appreciation of moral values, will indulge in the same criminal behaviour regardless of the number of sentences that have been imposed and served.

The neurotic driven by impulse to commit a particular crime such as pyromania, kleptomania, exhibitionism, etc., will accept punishment but it will not reach the source of his crime because it fails to reach the unconscious motivation. This then is the reason our Reformatory is filled with repeaters. A normal inmate may profit by his sentence, in knowing the difference between right and wrong he accepts the punishment he deserves, and decides he will have no more of it. He does not return.

The educational status of our inmates is low. Only 10% have entrance standing or better. 70% are below grade VI, 207 were illiterate.

An interesting educational survey was completed during the year. 360 letters were sent to the various schools, inmates had attended. 320 or 84% of the letters were answered. In 196 cases or 61.25% the inmate gave his correct educational standing, but the teachers remarks might qualify this standing by stating,—“He was so troublesome he was passed into this grade because his previous teacher got tired of him.” “He was too big to be kept with the smaller children,” etc., etc. In 124 cases or 38.75% a higher standing was claimed by the pupil than he had attained. In 160 cases the inmate found it necessary to repeat grades in public school work. Tests given by our teacher showed that over 50% of those inmates credited with entrance standing obtained less than forty marks. Very few of the inmates show an interest in current events. A check has been made on this to a limited extent, and it has been found that world events more than a year old, or even of a more recent date mean absolutely nothing. For example, very few can recall for what Dunkirk is famous.

No reading to any extent is done previous to commitment. Many admit they never read a complete book before they entered this Institution. Those that have read confine their efforts to the cheapest class of lurid magazine. This in itself might account for the loss of any educational knowledge they had, in a short length of time.

95% of these inmates have never had a true hobby. Many list reading and some few sports, but on questioning them closer it appears they feel they must give an answer and they pick on either of these subjects. Their interest in sports is not actually taking part in the play but watching, and reading meant getting the current issue of some of the now banned magazines.

The school had a successful year. Twelve pupils wrote their entrance examinations and twelve passed, four with honours. Good progress was made with the illiterate and junior classes. The night vocational classes were well attended.

The library books at the end of the year totalled 4,387. 2,350 volumes were received during the year 2,155 were discarded from our library from overuse. 405 were sent to the Girls' Training School. A great deal of reading was done by inmates in the cell block.

Physical training classes were held five nights a week. This is compulsory for all physically fit young men. Basketball games, and monthly boxing bouts were held during the winter months.

The general health of the inmates was good. One death occurred from cardiac decompensation. Twelve major and fifteen minor operations were successfully

performed in the Guelph hospitals, where a total of thirty-one patients were treated. The dental clinic gave some 2,879 examinations and 1,783 treatments. Fifteen inmates were transferred to mental hospitals for treatment. 66 commitments had syphilis or 3.21%. 11 had gonorrhoea or .53%. Two escapes were made, both were recaptured. Discipline was well maintained during the year.

All the industrial departments operated throughout the year. The total industrial revenue was \$530,220.72. Our total profit from all industries was \$19,695.93.

In the abattoir our total sales of products amounted to 2,143,046 pounds, with a value of \$293,775.01. The auto marker plant produced 807,713 pairs of license plates. Our cannery production was goods to the sales value of \$77,628.71. The machine shop had a production of goods valued at \$12,846.27. The planing mill turned out products valued at \$8,642.71. The tailor shop production was \$48,311.52. The woollen mill production was goods valued at \$29,449.80.

On our farm the crops were good, but excessive rain in the fall somewhat hampered the harvest. Our farm recoveries amounted to \$44,475.80, an increase of \$9,230.00 in value over the preceding year. 493 hogs were raised and sold to our abattoir at a value of \$8,756.40. Our dairy herd produced 794,007 pounds of milk at a value of \$14,483.61.

We are very grateful to those who, during the year, provided entertainment, religious services, and gave spiritual advice to our inmates.

I wish to commend my staff to you for their conscientious and loyal service. I wish to thank the Honourable Mr. Nixon, yourself and your staff for the help, courtesy and kindness extended to us throughout the year.

Yours very truly,

J. D. HEASLIP, M.D.,
Superintendent.

THE ONTARIO REFORMATORY, MIMICO

May 27th, 1941.

DEAR SIR:—

I have the honour to submit this report covering the activities of the Ontario Reformatory, Mimico, for the year ending March 31st, 1941.

Since my last report numerous changes have taken place at this Institution. Early in July 1940 the main block of buildings, including dormitories, kitchen, offices, power plant and industrial buildings were taken over by the Military Authorities. This resulted in drastic changes in our personnel and program for the year. The inmates were transferred to the Ontario Reformatory Guelph and Toronto Jail. Some of our officers were transferred to Guelph, several enlisted in the army and a few remained to operate the farm lands not taken over and harvest the crop sown in the spring. The herd of pure bred Holsteins, built up to considerable proportions, all being registered and on R.O.P. Test, and comparing favorably with outside herds as to milk production and butter fat test, were transferred to Guelph. Our hogs were also transferred to Guelph and our poultry stock was distributed between the Training Schools at Galt and Bowmanville. Our horses were retained to take care of the farm and harvest the crop.

The farm work has been carried on by having a number of inmates brought out from the Toronto Jail each morning and taken back again in the evening. Harvesting was completed under trying conditions. Owing to heavy rains and windstorms, crops, which were very heavy, were flattened entailing extra labour and considerable loss of grain and straw. Had normal conditions prevailed the yield of grain would have been exceptional—for instance 12 acres of fall wheat yielded 573 bushels or an average of $47\frac{3}{4}$ bushels per acre.

A summary of the production from our livestock prior to transfer and the larger items of the garden and farm crops turned over to other Institutions is given below.

Livestock:—	43 Hogs for slaughter.
	7 Cows for slaughter.
	5 Calves for breeding.
	87,735 lbs. of Milk.
Poultry:—	356 doz. Eggs.
Garden and Farm:—	573 bus. Wheat
	1,500 bus. Oats.
	225 bus. Barley.
	127 tons Hay.
	97 tons Straw.
	14,631 lbs. Beets.
	54,289 lbs. Cabbage.

32,805 lbs. Carrots.
37,000 lbs. Mangels.
15,542 lbs. Onions.
12,714 lbs. Parsnips.
99,695 lbs. Potatoes.
2,500 lbs. Rhubarb.
2,795 lbs. Tomatoes.
18,500 lbs. Turnips.

The health of our inmates was good. There were no outbreaks of illness due to care exercised by Dr. D. S. MacLennan, Institution Medical Officer and Mr. J. H. Deacon, our male nurse.

I desire to express my personal thanks to Honourable Mr. Nixon, yourself and members of your staff for valued advice and counsel and to the staff of this Institution for loyal support. I wish also to express my thanks to Reverend M. G. B. Williams, Anglican Church, Rev. C. E. Dyer, United Church, Reverend Father McGrath, Roman Catholic Church and the Salvation Army for untiring efforts in caring for the spiritual welfare of our inmates.

Yours sincerely,

J. R. ELLIOTT,

Superintendent.

ANNUAL REPORT
OF THE INDUSTRIAL FARM, BURWASH, ONTARIO.

APRIL 1ST, 1940 TO MARCH 31ST, 1941.

I have the honour to forward the following report for the year ending March 31st, 1941.

Owing to the Department of National Defence taking over some of our Institutions for Internment Camps, considerable changes have been made these last two years. Our Branch at Monteith was transferred in July of 1940, and the prisoners transferred, some to the District Gaols and some to Burwash. Those of the Staff who wished to be were transferred to Burwash, and all the stock, machinery, etc., were returned there also.

The plan of sending inmates up to Seagram to work on the Trans-Canada Highway worked out very successfully. They did a lot of work, and except for a very few, behaved themselves and were able to earn a little money to help re-establish themselves, after their release. The inmates under experienced Officers and Guards from Burwash, and a resident Engineer of the Department of Highways, erected camps, cut logs, helped operate a portable sawmill, cut logs into lumber to build more camps, operated trucks and graders, dug ditches, graded roads and cut down right-of-way so well that at least eleven miles of road will be completed by this fall, with about thirty miles of tote road cut for the hauling of supplies and equipment. Seventeen inmates escaped or attempted to escape, but all were recaptured.

At Burwash, we had a very successful but busy year; having plenty of rain, when needed most. We had a very heavy crop of hay and will have some stacks left over for next year. Our grain was good but owing to the wet fall, it was hard to harvest, and a small quantity spoiled; our potatoes were poor as the wet weather rotted them in the ground; but our garden vegetables were good, and being well stored, we are using cabbage, beets, parsnips, turnips and carrots today that are just as firm as the day we stored them. This helped considerably in keeping down the cost of our meals and also gave the prisoners fresh vegetables to eat.

Our cattle, sheep and pigs increased greatly and from our dairy herd we had an abundance of fresh milk. Owing to the difficulty and cost of buying horses every year, to replace those dying off, and to enable us to get a younger and better grade of horses, the Department bought us fourteen young mares and a registered Belgian Stallion. By these means, we propose to raise our own colts, and in time this should prove a very economical way of getting and keeping young, strong horses for work.

Last summer all inmates not engaged in Camp or Farm duties were kept stumping and clearing land for cultivation and the stumps were split for firewood for use at the power house. We ploughed one hundred and fourteen acres of new land last fall, and this will be cultivated and seeded this summer.

Due to the closing of Monteith and the transferring of the stock, we had to build a new barn. Although we started late, in three months, with prison labour only, we completed a barn 96 ft. by 45 ft. with feed room and roothouse at one end and stabling for forty-four cattle. In the winter the prisoners were engaged in the bush, one large gang cutting firewood for our heating plants and another gang cutting, skidding and hauling twenty-two thousand logs to our sawmill to be cut into lumber this summer. This should give us around a million board feet of good lumber.

Although our count of prisoners was higher than ever before, owing to the closing down of some of our other Institutions, discipline was excellent during the entire year. Only fourteen men attempted to escape but all were recaptured and there was no trouble, agitation or complaint. The men, doing much good work, were fed nourishing, well-cooked meals. When weather permitted they were allowed to play baseball on Saturday afternoons. In wet weather and in the winter they were allowed to box, play cards, checkers and dominoes. At Christmas, they had a concert arranged with their own talent and with their own orchestra. They are allowed papers, good magazines, and books. With a loud speaker installed in every dormitory and camp they hear all news broadcasts, good plays and music. The health of all inmates and staff was excellent throughout the year.

Discipline among the staff was very good. Quite a number of the staff enlisted in the Army, Air Force and Navy and a number of new Guards were engaged to replace them. Our new Guards were all given lectures on organization and administration of prisons and reformatories, and of this institution in particular. They were also given lectures on discipline, conduct and the handling of prisoners. A course of instruction was given in musketry for rifle, revolver and practice shooting at our rifle range, and all succeeded in passing the test.

In conclusion I wish to thank The Honourable Harry Nixon and yourself for your valuable advice and counsel throughout the year, and those members on your staff who work with us; also Major Talbot, of the Salvation Army, a man who works long and hard for the spiritual welfare of our prisoners, and also the other Ministers of the Gospel who visited us at different times.

I would like to point out that my staff has worked efficiently and hard, and that the smooth-running of this Institution today is in a large measure due to their loyalty and devotion.

Yours very truly,

H. W. POWELL,

Superintendent.

MERCER REFORMATORY.

May 21, 1941.

MR. C. F. NEELANDS,
Deputy Provincial Secretary,
Parliament Buildings,
Toronto, Ontario.

SIR:

I have the honour to submit the Annual Report of the Andrew Mercer Reformatory for Females for the year ending March 31, 1941.

The population at the beginning of the year was 124. During the year 350 were admitted. 63 were released on parole, 5 were released by Order-in-Council, 11 by payment of fine and 1 by remission of sentence. As will be seen from the attached statistical tables, 7 of the 350 inmates received sentences of less than 30 days, 58 were under 60 days, 27 were under three months. Such short terms give no opportunity for satisfactory training in any one craft. Four inmates were under 16 years of age when admitted. Diversity of sentences for the same offence causes confusion and discontent in the minds of those sentenced.

I wish to draw your attention to the fact that from time to time among the commitments are those who are mentally defective, insane or physically unfit. Their condition often is obvious even to a casual observer, and their admission here interferes with the administration and discipline of our institution. During the year 6 were transferred to mental hospitals. I recommend that a mental examination be given each person admitted to this Reformatory.

The separation of the different classes confined here would have better results if we were able to complete the segregation by having separate diningrooms for them.

Interior improvements begun during the year are still incomplete. The installation of the new locking system throughout the building, and the modern type fire-escape built within the walls of the west section and with numerous exits from each floor, provide much greater safety. The building is now well equipped with fire-escapes.

A small greenhouse, in which to preserve and cultivate our plants, is badly needed and such an addition would have an aesthetic as well as an economic value. We also require a fireproof shed in which to store paint, to obviate the fire hazard in the present arrangement of storing paint in the basement of the building.

I am most grateful to the clergy and Sunday School teachers who have given so generously of their time and endeavour, and to all others who have contributed in various ways to the comfort and entertainment of the inmates. Whatever good work may have been accomplished in this institution has been due to the co-operation and continued efforts of the members of the staff.

May I express my gratitude for the kindness and assistance which I have received from you, sir, and from the officials of your Department during the past year.

I have the honour to be, sir,

Your obedient servant,

JEAN MILNE,

Superintendent.

Board of Parole

ANNUAL REPORT OF THE ONTARIO BOARD OF PAROLE

FOR THE YEAR ENDING MARCH 31ST, 1941.

The great essential work of the Ontario Board of Parole is the re-establishing of the offender and his restoration to society as a respected citizen; yet, there is an unsentimental monetary side to the work as well. A man inside an institution is a decided liability, owing to the cost of maintenance by the Province, but on going out to remunerative work he becomes an asset, whole families are by the one process removed from dependence upon charitable organizations and municipal relief. The Ontario Parole System has, through its efforts during the year just ended, proved an effective instrument of rehabilitation. Through the closer supervision of men and women under this system, particularly toward home and family obligations, a decided improvement has been evidenced. Closer co-operation with both municipal and provincial police, assisted materially by the public, owing to a more sympathetic understanding of the system, a finer spirit of human relationship now exists. The Board, we believe, through its officers, has now created a better understanding with men and women under its supervision.

Owing to conditions which existed until recently it was difficult in many cases for inmates who had been granted parole to secure employment, but in the majority of cases this was arranged.

The personnel of the Board was not changed during the year and is composed of: J. F. McKinley, L. J. Long, A. F. Hatch, R. S. Clark, W. B. Common and Mrs. D. Strachan.

The Executive Staff of the Board is comprised of C. F. Swayze, Chief Officer and Secretary, G. R. Trumbell, Assistant Parole Officer, four stenographers and one filing clerk.

STATEMENT OF PAROLE VIOLATORS FOR THE YEAR ENDING MARCH 31ST, 1941

Re-convicted:

Paroled previous to March 31st, 1940	5
Paroled during the fiscal year	22
	— 27

Sent Back and Parole Cancelled:

Paroled previous to March 31st, 1940	4	
Paroled during the fiscal year	16	
	—	20

Disappeared:

Paroled previous to March 31st, 1940	4	
Paroled during the fiscal year	5	
	—	9
		— 56

Total Failures:

Paroled previous to March 31st, 1940	13	
Paroled during the fiscal year	43	
	—	56

Paroled:

Men	554	
Women	63	
	—	617

Failures 6.97%

J. F. McKINLEY,
Chairman.

The Salvation Army

A REPORT OF THE PRISON, JAIL AND POLICE COURT WORK
IN THE PROVINCE OF ONTARIO.

FOR THE YEAR ENDED SEPTEMBER 30TH, 1940.

We submit a brief report of the work done by The Salvation Army in the Prisons, Jails and Police Courts of Ontario.

Our officers are continually in touch with the inmates of the various Institutions, and every man on discharge—if he has no place of residence—may be accommodated at our Home during such time as he is seeking work or arranging to return to relatives. In Toronto there is a special building for the accommodation of discharged prisoners, and a number of officers are exclusively employed in looking after the interests of discharged men and their families.

It is very difficult for a man leaving prison to regain his former place in society, but many do so, and often the way is made easier for the man by arranging with out officers prior to his release, to meet and welcome him.

Of course it is generally known that in the case of law-breakers the real sufferers are the wives and children. Prisons as a rule, are far more comfortable than many of the homes in which the families live, and prison fare is far better than that which many working men can supply their families.

PRISONERS' WELFARE WORK

It is well that even the law-breakers should be spared unnecessary punishment while in prison, but it is sad that the innocent should suffer at home for the wrong-doer. The Salvation Army, as far as the funds at its disposal will allow, strives to alleviate the condition of the dependents of prisoners. In practically every town and city our officers are available for visiting the families of men in prison and helping the man on his return home.

The experience of The Salvation Army goes to prove that there is no factor in the permanent reformation of the wrong-doer so powerful as the effects of religion, therefore, it is to the spiritual nature of the prisoner that Salvationists urgently appeal by means of personal interviews and religious meetings. Thus to the thousands of religious services conducted in the Ontario Prisons during the year, and the hundreds of personal interviews, plus the contacts in their own homes, and in the Social Service Office on their release, may be attributed in a great measure the change of heart an encouraging number of discharged prisoners experience.

In closing I want to put on record our gratitude and thanks to the superintendents and officials of the various Institutions, also the magistrates and crown attorneys for their real sympathy and help in cases where they feel that mercy can be extended yet justice done.

REPORT OF PRISONS, GAOLS AND POLICE COURT WORK FOR THE
PROVINCE OF ONTARIO, YEAR ENDED SEPTEMBER 30th, 1940.

Visits to Gaols, Prisons and Police Courts, including visits when services are held	4,559
Interviews with men	10,543
Religious services conducted in Prisons and Gaols.....	1,429
Men handed to The Salvation Army, met on discharge or who have come direct to the Prison Office	2,187
Meals and beds supplied free	14,971
Letters written or calls made by 'phone in order to bring about reconciliation or secure employment for discharged men.....	5,129
Visits to homes, also prospective employers on behalf of prisoners.....	3,894
Employment secured, returned to former jobs or sent back to friends or parents mostly from the Police Court	1,101
Number provided with clothing.....	945

NOTE:—Gifts are made to men and women at Christmas at all Prisons and Jails.

REPORT
OF THE
Minister of Public Welfare
Province of Ontario

FOR THE FISCAL YEAR

1939—1940

PRINTED BY ORDER OF
THE LEGISLATIVE ASSEMBLY OF ONTARIO
SESSIONAL PAPER No. 19, 1941

ONTARIO

TORONTO

Printed and Published by T. E. Bowman, Printer to the King's Most
Excellent Majesty, 1941

TO:

THE HONOURABLE ALBERT MATTHEWS,
Lieutenant-Governor of the Province of Ontario, in Council.

MAY IT PLEASE YOUR HONOUR:

The undersigned has the honour to transmit herewith the Ninth Annual Report of the Department of Public Welfare for the fiscal year 1939-1940.

I have the honour to be, Sir,

Your obedient servant,

N. O. HIPEL,
Minister.

TORONTO,
March 31st, 1940.

TABLE OF CONTENTS

	Page
1. Report of Deputy Minister	5
2. Report of Old Age Pensions Commission	15
3. Report of Mothers' Allowances Commission	24
4. Report of Supervisor of Investigators	28
5. Report of Director of Unemployment Relief	29
6. Report of Provincial Superintendent, Children's Aid Societies	34
7. Report of Children's Institutions	42
8. Report of Inspector of Refuges	50
9. Report of Soldiers' Aid Commission	59

TO THE HONOURABLE N. O. HIPEL,

Minister of Public Welfare.

I beg to submit herewith a report covering the activities of the Department of Public Welfare for the fiscal year commencing April 1st, 1939 and ending March 31st, 1940;

The period under review encompasses the first seven months of the second World War. In the field of Unemployment Relief, for example, the impact of the conflict upon this country's welfare services was not immediate; Unemployment Relief continued as a major problem with relatively small improvement noted during the period covered by this report.

In later months, however, the slight downward trend in evidence in the early part of 1940 became accentuated and the question of providing relief for employable persons is confidently expected to become a diminishing problem as the War continues. The problem of the unemployable person and his dependents continues, however, and as this is written, it is this class which forms the bulk of persons in receipt of relief.

At the same time other welfare services stand to be affected by the accelerated economic pace which wartime demands. Greater opportunities for employment have made it possible in a great many instances for persons in receipt of provincial aid, either through old age pensions or mothers' allowances, to receive a greater measure of assistance from children and other relatives, thereby relieving the demands upon the Provincial Treasury. As a corollary, however, new problems have arisen as a result of the war in the field of Children's Aid work, a salient feature of which is the vastly increased number of adoptions completed. In the main this development is the result of a desire on the part of the families concerned to make adequate provision for children who had been living in their homes for some years, and whose security might be threatened in the future by the uncertainty of war.

The improvement in the economic picture reposes in the Department of Public Welfare an even greater responsibility than existed before in exercising careful supervision over all welfare expenditures in order that full advantage might be taken of this altered situation. Although the aggregate expenditure for welfare services must decline to some extent, it is essential that the high standard of investigation procedure, with its attendant safeguards, be maintained in order that there be no weakening in the high standard of administrative work attained in recent years.

In this connection the Department recognizes a two-fold responsibility—to the taxpayers of the Province who must provide the funds to assist those in need; and to the persons who have a just claim upon provincial assistance. It is too frequently overlooked that the present organization of trained investigators is designed to provide assistance and advice and to ensure sympathetic consideration of every case.

Although not coming within the full scope of this report, it must be mentioned that early in 1940 the Provincial Government, through its Department of Public Welfare, indicated to the Federal authorities its willingness to co-operate to the utmost in any program which might be undertaken having as its object the placing of British children in homes of this Province for the duration of the War. With the active assistance of Children's Aid Societies and officials throughout the Province, extensive plans were made in this direction and the interest of the people as a whole solicited. The response was marked and promises well for the ultimate success of this most worth-while undertaking.

All of which is respectfully submitted,

G. S. TATTLE,

Deputy Minister of Public Welfare.

Department of Public Welfare

ANNUAL REPORT OF THE OLD AGE PENSIONS COMMISSION

DEPARTMENT OF PUBLIC WELFARE

Fiscal Year Ending March 31st, 1940

The Old Age Pensions Act came into effect in the Province of Ontario on November 1st, 1929. Since that date there has been a gradual increase in the number of beneficiaries. At the end of this fiscal year, 59,717 persons were in receipt of this form of assistance, representing an annual outlay of \$13,073,021.00.

The fiscal year under review covers the first seven months of the present World War, a conflict which affects every department of governmental activity as well as the personal interests of every individual citizen. Insofar as Old Age Pensioners are concerned, it is heartening to report that even those who are receiving state aid have not been remiss in manifesting the spirit of self-denial and loyalty. Many of our pensioners are working daily, as much as they can, sewing and knitting articles for the soldiers, while in some cases, those who have been receiving this assistance have requested that their pensions be reduced and even suspended for the duration of the War. It is with pardonable pride that the Commission brings to the attention of the taxpayers of Ontario this spirit of self-sacrifice.

The children of many pensioners are now serving in our armed forces, with the result that insofar as dependency can be proven, their parents have become eligible for Federal assistance, thus relieving our Province from further responsibility as regards the Old Age Pension.

Many difficulties in the administration of the Act which had heretofore been the cause of regrettable delay, have been overcome. It is hoped that with the continued and closer co-operation of all bodies having to do with this service, further progress can be made to expedite the passing of applications by the Commission so that the applicant may receive a decision at the earliest possible moment.

Recognition is due the Municipal Clerks of the Province and the Local Boards for the excellent service they are rendering the Commission in carrying out their duties under the Act. Another important activity which merits mention is the work of the Provincial Investigators, whose duties take them into every corner of the Province.

Special attention has been paid by the Commission to the recovery, where possible, of funds advanced to pensioners whose estates disclose assets following their death. The amount of such recoveries has been increased during recent years at a rapid rate.

The Old Age Pension Commission is also charged with administration of the Act as it affects blind persons. With the end of the present fiscal year there were 1,333 such cases in Ontario, representing an expenditure of \$301,859.00 during the year.

In conclusion the Commission is pleased to report a more co-operative spirit shown by our citizens as a whole and particularly by the legal profession of the Province, who are in a position to render marked assistance to the end of just and efficient administration of the Act.

J. A. FAULKNER,
Chairman.

G. S. TATTLE,
Vice-Chairman.

C. H. GREEN,
Commissioner.

ANNUAL REPORT OF THE MOTHERS' ALLOWANCES COMMISSION
DEPARTMENT OF PUBLIC WELFARE

Fiscal Year Ending March 31st, 1940

In reviewing the work of the Mothers' Allowances Commission for the fiscal year ending March 31st, 1940, it is well to point out that the proper care and upbringing of children concerned in these cases is the first consideration guiding the Commission in administration of the Act.

While the Commission must render the final decision as to eligibility, that decision hinges upon many factors in which various agencies are concerned. First of all comes the report from the Local Board which, being situated in the community in which the persons concerned reside, is in a position to pass upon the circumstances as set forth in the application. This is supplemented by a detailed report from the Commission's investigator, whose training makes it possible for each case to receive careful and sympathetic treatment.

During the period presently under review we are pleased to report that increased opportunities for employment have made it possible in many instances for children to contribute to the support of their mothers, thereby relieving the charge upon the treasury of this Province. In addition many sons of widowed mothers have joined the armed forces, assigning pay and allowance to aid in the upkeep of the home.

Nevertheless, the work of the Commission and its staff is still onerous and each case, because of changing circumstances in and out of the home, requires continued attention. A competent staff of investigators covering every section of the Province is in constant touch with beneficiaries and in many cases is able to render valuable assistance and advice in meeting the manifold problems arising in the home.

The problem of the permanently unemployable husband has been receiving the careful attention of members of the Commission. This has been one of the most difficult aspects of Mothers' Allowances administration in view of the numerous "borderline" cases in which it is difficult to obtain agreement by medical authorities as to the degree of incapacitation. Early in 1940 a new method of handling such cases was established with the co-operation of the Department of Health and although it was not in full operation until after the period covered by this report, most satisfactory results can be expected.

The question of granting an allowance to a widowed mother with assets in insurance is also being handled efficiently from the standpoint of both the former and the taxpayer as well. In this connection the Commission wishes to mention the fine co-operation extended by the Judges of our Courts, the Official Guardian, insurance companies and the various fraternal organizations and service clubs.

The Mothers' Allowances Act in the year now completed, entailed an expenditure of \$5,057,286.00, representing assistance to 12,138 homes.

J. A. FAULKNER,
Chairman.

II. BENTLEY,
Vice-Chairman.

E. V. McKECHNIE,
Commissioner.

REPORT OF THE MOTHERS' ALLOWANCES COMMISSION
MEDICAL BOARD

Toward the end of this fiscal year, a new departure was approved, with respect to Mothers' Allowances paid on the basis of incapacitation. Arrangements were instituted, whereby the Department of Health would act in a medical advisory capacity to the Mothers' Allowances Commission, regarding men whose families were receiving Mothers' Allowances or were applying for such Allowances.

The duties of the Medical Board thus formed in the Department of Health were to be:—

- (a) —To conduct a complete medical audit of the 3,285 incapacitation cases for whom Mothers' Allowances were being paid, as of May 20th, 1940. This survey would include:—
- 1.—Extracting the medical evidence already on the Mothers' file in each case.
 - 2.—Constructing a confidential medical file.
 - 3.—Making a critical analysis of the available evidence and, where this evidence was not considered adequate, arranging to secure, through examinations by private physicians, investigations in hospitals, etc., the necessary evidence. (Arrangements were made for the Department of Public Welfare to pay for examinations by private physicians, where such examinations were considered necessary).
 - 4.—Issuing a certificate to the Mothers' Allowances Commission in each case, whenever sufficient evidence had been secured.
- (b) —To receive the medical evidence submitted with each new application for Mothers' Allowance on the basis of incapacitation; to construct a confidential medical file for each such case; to secure the new medical evidence as required and finally to issue a certificate to the Mothers' Allowances Commission, stating whether or not the man in question is believed to be permanently unemployable.
- (c) —To present to a "Medical Appeal Board" the information regarding those cases where an appeal is filed and additional medical evidence is received, against a previous certificate issued in any case by this Medical Board.

DR. B. T. McGHIE,

Deputy Minister of Health.

ANNUAL REPORT OF THE SUPERVISOR OF INVESTIGATORS
FOR
OLD AGE PENSIONS AND MOTHERS' ALLOWANCES
April 1st, 1939 — March 31st, 1940

The investigation of Old Age Pensions and Mothers' Allowances has been carried out during the fiscal year under review according to the policy introduced in 1937.

The division of the Province into thirty-three districts, and the employment of fifty-six investigators, four of whom are special investigators, has been maintained.

In Old Age Pensions investigations, many calls are frequently necessary to acquire sufficient authentic information to complete the record of First Investigation. All documentary evidence as required by the Act must be furnished. Proof of age and residence qualifications are necessary. Assets, income and all particulars pertaining to property and property transactions must be verified. A certified statement of the unmarried children's earnings must be attached to the record of First Investigation, if earnings are in excess of the minimum wage class. In many cases the applicant is frequently handicapped by physical weakness, and it is difficult to obtain the information necessary. This necessitates tact and patience on the part of the investigator, and a thorough understanding of human nature.

The assistance given by the Municipal Clerks is greatly appreciated by the investigators.

In addition to dealing with new applications, the investigator completes an annual report on each pensioner, in order that the Commission may be kept informed of changes in the economic status of the pensioner.

Investigation on Blind Pensioners is carried through as for Old Age Pensioners.

Investigation on Mothers' Allowances cases is carried out with emphasis on the value of keeping families intact. One of the major activities of the investigator is to serve in an advisory capacity, in solving essential problems.

In addition to investigation of new applicants, a report is completed each year and frequent calls are made on many of the Mothers' Allowances beneficiaries.

In the Province for the year under review, 82,318 calls were made by the staff of investigators, who travelled thousands of miles regardless of weather and road conditions. The expenditures in salaries and transportation amounted to \$108,152.12.

It is planned, during the next year, to enlarge on the scope and responsibility of the special investigator, so that each will become more responsible for the work of the investigators in her district, rather than serving as extras, as in the past. Through this personal contact, it is hoped that each investigator will develop a more thorough understanding of the requirements of the Commission and thereby record her findings in such a way as to more adequately aid the Commission in reaching their decision.

Respectfully submitted,

(Mrs.) MARY M. POWELL.

RELIEF OF THE UNEMPLOYMENT RELIEF BRANCH
DEPARTMENT OF PUBLIC WELFARE
Fiscal Year Ending March 31st, 1940

I have the honour to submit herewith the report of the Unemployment Relief Branch of the Department of Public Welfare, for the fiscal year ending March 31st, 1940.

The report covers gross relief costs and number of persons assisted as reported by the Accountant; surveys of local administration as reported by the Chief Inspector; Farm Rehabilitation Plan and the Vacant Land Cultivation scheme as reported by the Inspector in charge of both projects; items with respect to residence both inter-municipal and inter-Provincial and transportation provided and further, a statement with reference to assistance for dependents of internees, all of which was provided by our Inspector in charge of these items.

These separate reports are submitted in the order named above.

E. A. HORTON,
Acting Director, Unemployment Relief.

DIRECT RELIEF COSTS

For the fiscal period April 1st, 1939, to March 31st, 1940, the Dominion-Provincial Agreement covering Unemployment Relief provided for a Dominion contribution of 40% to Material Aid expenditures (food, fuel, clothing, and shelter). In addition to these categories the Province and its municipalities included medical relief.

Prior to the 1939-40 fiscal period, Dominion contributions to Material Aid were on a monthly grant-in-Aid basis, which resulted in a much lower contribution from the Dominion than that received under the new agreement.

Total gross expenditures, and Dominion-Provincial-Municipal contributions for the fiscal period 1939-40, and comparative periods, were as shown in the attached schedules.

S. J. GADSBY,

Acting Accountant.

SCHEDULE I.

DIRECT RELIEF COSTS AND PERCENTAGES OF CONTRIBUTIONS

February	268,470	311,664	220,423
March	272,345	313,359	220,445

In the course of the past year the Department continued the policy of assisting local authorities in reviewing various phases of relief administration. Particular attention was given in this respect to the cities of Windsor, Niagara Falls, St. Catharines, and Hamilton in addition to many other smaller centres. The co-operation given this Department by the municipalities concerned has permitted improvement in dealing with relief administration in an orderly manner and has tended to standardize the procedure in dealing with the problem and schedules of relief granted.

During the past year with the decided upward trend in employment conditions due in the main to war industries, much more co-operation has existed as between the Unemployment Relief Offices in the various municipalities and the Employment Service Offices. This team-play has been most effective in placing unemployed persons in gainful occupation.

JAMES S. BAND,

Chief Inspector.

FARM REHABILITATION PLAN

From May 1st to December 31st, 1939, there were 60 families, or 406 persons, occupying 60 farms, with a combined acreage of 5,235 acres. During the period from December, 1939, to March 31st, 1940, five unsuccessful settlers were removed from the farms; two of these joined the Army. During this time the expenditures were: Livestock, \$14,669.54; Equipment, \$7,180.83; Seed, Feed, etc., \$4,817.58; Total, exclusive of rent, \$26,667.95. Rentals paid were \$8,304.02, while \$17,588.55 was the amount granted in material aid.

As these people were receiving food, clothing, fuel, etc., before placing them on the land, at a greater cost and at least a similar amount to that paid in farm rental was paid for city rent, it is assumed fair to deal with the cost of these settlements for the first year on a basis of the cost of livestock, equipment, seed, feed, etc., namely \$26,667.95.

The appropriation for each settler is \$600 for livestock, equipment, seeds, etc., or a total of \$36,000 for the 60 settlers. This leaves a reserve of \$9,332.05 to be carried over for further purchases that will be required in the spring of 1940.

The value of crops grown and increases of stock amount to \$21,451.86, which comes within \$5,216.09 of paying equipment costs for the season.

The rental plan provides for the payment of an amount not exceeding \$200 per year for a three-year period, when required. Therefore, \$12,000 was provided for rent for this year, while \$8,304.02 was the amount paid.

Number of municipalities participating in the Plan	11
Number of placements on March 31st, 1940	55
Number of persons in families on March 31st, 1940	370
Average persons per family on March 31st, 1940	7
Total acreage as of March 31st, 1940	4,832

We appreciate the assistance and co-operation rendered by Mr. R. S. Duncan, Director of the Ontario Department of Agriculture, also his able Agricultural Representatives in the different districts who have inspected these farms on different occasions and have so cheerfully responded to any appeal for information and advice.

VACANT LAND CULTIVATION SCHEME

On September 22nd, 1939, all municipalities and unorganized districts in the Province were notified that an Act, entitled "The Vacant Land Cultivation Amendment Act, 1939" was passed, effective at once. This permits any person to apply to the official designated by the municipality in which the applicant resides for a permit to cultivate and plant vacant land supplied free under the Act.

Each family on the active files of the local relief departments are required to take a garden plot or cultivate a backyard garden, or produce medical certificate for inability to work. Their permit is supplied free, with a supply of seeds, including potatoes and plants, also ploughing is done and fertilizer supplied when necessary. Any cost incurred to be borne proportionately by Federal, Provincial and Municipal contributions.

The application of the Act utilizes to the fullest possible extent the employability of any relief recipient, man, woman or child over sixteen years of age who has not already been applied to some other purpose.

All produce grown by relief recipients must be retained by them for their own use.

It was also suggested that a communal plot be set aside and cultivated by group effort on a voluntary basis for the benefit of any totally unemployables.

Every local Council is expected to utilize the powers of the Act for the good of any other person (not on relief) who wishes to obtain, under permit, a garden plot for the use of his family; in such cases, however, a fee, not to exceed \$1.00 and cost of seeds, equipment, etc., is to be borne entirely by the individual.

Immediately following this announcement programs were submitted for approval, and, on acceptance by the Department, fall ploughing completed so that the land would be in condition for early spring planting.

This Spring, seeds, including potato plants, etc., have been purchased and it is expected that all who participate in the garden scheme will produce vegetables in sufficient quantities to more than serve the purpose for which it was intended, which is, that the value of the produce grown will offset any loss that may be occasioned to the purchasing power of the relief recipient's vouchers as food commodities increase in price.

Many community plots have been arranged for, service clubs, organizations, manufacturers and citizens are co-operating by supplying land, tractors, fertilizers and seeds. These same people and many others have volunteered their services for cultivating and planting so as to supply those less fortunate with vegetables for the coming winter.

J. D. CLARKE,

Inspector,
Farm Rehabilitation Plan.

Residence—Province of Ontario

The residence regulations pertaining to the twelve months gainful employment period has worked out satisfactorily. A considerable number of cases have been cleared with the municipalities by the Provincial Inspectors and this Department and the responsible municipality established for relief purposes. This has avoided the dumping of families from one municipality to another which was previously being done by some municipalities. Charge-back accounts between municipalities have also been cleared satisfactorily.

Inter-Provincial Residence

In order to clarify and to have similar residence regulations applicable and uniform between all the provinces, on March 16, 1939, the matter was taken up with the Dominion Relief Commissioner, Ottawa, with the result that the previous residence ruling of three complete years was changed to read "the individual or family must be self-supporting by gainful occupation for twenty-four months before gaining residence when moving to another Province." The clause was embodied in the Federal and Provincial Agreement dated August 4th, 1939, signed by the Dominion Government and all Provincial Governments.

A considerable number of families were removed from the Western provinces to Ontario and where they were unable to become self-supporting after a reasonable period, they were issued transportation and returned to the Province from which they had moved, all cases previously having been taken up with the responsible Province.

Some families removing from the drought areas in Saskatchewan have been assisted by the Province of Saskatchewan to move to Ontario, relief being granted through the Ontario municipalities and paid by the Province of Saskatchewan. Assistance has been given the Province of Saskatchewan in these cases to re-establish these families on farms in Ontario and the Provincial Inspectors of this Province have investigated some of these cases at the request of the Saskatchewan authorities. Where families have not been able to become self-supporting by gainful occupation they have been returned to Saskatchewan and such return agreed to by the latter Province.

The inter-provincial residence regulations are working out very satisfactorily.

Transportation

Where a man has been able to obtain bona fide employment, he and his family being in destitute circumstances and in receipt of relief assistance, transportation has been provided in conjunction with the municipalities to enable the man and family to become self-supporting and thus reduce the relief rolls.

Dependents of Internees

Commencing in the month of September, 1939, where the head of the family has been interned and dependents were thereby left in destitute circumstances, assistance has been issued to the dependents by the municipal relief departments at the prevailing relief scale in the community in which they reside on receipt of approval from the Dominion Relief Commissioner, Ottawa.

The accounts are forwarded monthly by the municipalities to the Provincial Relief Branch and re-imbusement is made at 100% by the Federal Government.

ARTHUR T. BOSANQUET,
Inspector.

REPORT OF THE CHILDREN'S AID BRANCH APRIL 1, 1939—MARCH 31, 1940

During the past several years, many local Children's Aid Societies have recast the organization. This effort was most opportune and has now placed them in a position to cope with increasing requirements for service as a result of the war.

Each of the Societies has undertaken extra work for the Dependents' Allowance Board. In some instances this has taken the form of investigations for the purpose of obtaining information for the granting of allowances. In others, it has meant the supervision of families and the administration of allowances.

While services of this nature have increased, the regular work of the Societies has not been neglected. During the year under review, the Societies were called upon to deal with 4,577 new complaints of neglect involving 15,661 children. Of the 15,661 children, 1,095 were committed to the care of the Societies as wards. The remainder of the children remained in their own homes under the supervision of the Societies. The families, therefore, continued to take their place as a unit in the community. The programme of prevention accepted by the Societies thus not only kept the families together but saved the municipalities considerable sums in maintenance payments.

Once again, however, it is necessary to emphasize that the whole programme of family readjustment has meant that the type of children being committed to the Societies as wards has increasingly been of those who have to be maintained in pay care. Either through physical or mental handicaps or because of age or improper training, they are not easily placeable in free or adoption homes.

Notwithstanding the difficulty referred to above, the number of adoptions completed for the year has shown an increase. For the year ending March 31st, 1939, 986 adoptions were completed. For the year ending March 31st, 1940, 1,241 adoptions were completed. The statistics show that with one exception each of the war months for the year under review has shown an increase in adoptions completed over the non-war months. This is explained by the fact that many men who have enlisted wanted this matter settled before they left for overseas. The same safeguards with respect to adjustment of the child in the home as hitherto applied have, however, been maintained. It has also been necessary to keep a careful check lest children be taken for adoption for the sole purpose of obtaining additional allowances.

At the end of the year the Societies had in care 10,521 children,—a slight decrease from the previous year. Of these, 5,458 were in free, wage or adoption probation homes at no charge to the municipalities. The children in care continue to be visited at regular, and in many instances, increasing, intervals by a representative of the Society. Periodic health examinations and regular checking of school attendances combined with these home visits tend to assure that the children in care enjoy a proper and normal home life.

A slight falling off in the number of unmarried parents' cases is noted. Collections for the maintenance of children born out of wedlock have increased from \$91,825.76 for the year ending March 31st, 1934, to \$94,130.48 for the year ending March 31st, 1940.

The Provincial Officer has the direct responsibility for administering the Unmarried Parents' Act and the Adoption Act. The representative of each local Children's Aid Society acts for the Provincial Officer under the above Acts in a local community. All matters dealt with under the Children's Protection Act are handled by the local Society which is a locally autonomous organization. Certain supervision over the Societies is maintained by the Children's Aid Branch. Finances of these Societies are chiefly obtained from local private and municipal sources supplemented by certain provincial contributions. Total expenditures of the Children's Aid Societies for the year amounted to \$1,398,266.75.

It is gratifying to note that the uniformity of practice developed on a Province-wide basis has placed the Societies in a position to render such service as they may be called upon to give on the "Home Front."

B. W. HEISE,

Provincial Superintendent.

Annual Report

CHILDREN'S AID BRANCH OF THE PROVINCE OF ONTARIO
REPORT RE CHILDREN IN CARE

Fiscal Period—April 1st, 1939 to March 31st, 1940

STATISTICS

	Wards	Other Societies' Wards	Non Wards
Total No. of children in care at first of year	7949	969	2358
No. of children admitted to care during year	1223	305	2304
No. of children discharged during year	1191	388	2122
Total No. of children in care at end of year	7981	886	2540

TYPE OF CARE

	Wards	End of Year Other Societies' Wards	Non Wards
Shelter	449	2	88
Boarding Home	3217	62	465
Adoption Probation	411	110	1587
Wage Home	1060	192	45
Free Home	2106	484	249
Other Institutions:			
1. Placed for specific care under direct supervision	311	11	86
2. Mental Hospital	229	15	1
3. Correctional Institution	194	10	19
TOTALS	7981	886	2540

FIELD WORK

1. No. of visits re all children in care	72761
2. No. of office interviews re all children in care	34598
3. No. of attendances on children:	
(a) Mental Health	1749
(b) Medical	15752
(c) Dental	1712
4. No. of children in care contacted in office or on visit during year	23656
5. No. of first placements of children	2233
6. No. of replacements of children (one home to another home)	1578
7. No. of children returned to the Shelter	1075
8. No. of Foster Home Investigations .. 2637 involving 4348 visits.	
9. No. of replacements shelter to foster home	890
10. No. of visits in search of foster homes	1811

INDUSTRIAL SCHOOLS

No. of investigations for Industrial Schools:	
(a) Before commitment	221
(b) Before parole	295

ADOPTION

No. of investigations for Final Adoption	859
No. of Final Adoption Orders Obtained	1072

CHILDREN'S INSTITUTIONS**April 1, 1939 — March 31, 1940**

During the year under review, forty-two children's institutions in the Province provided 673,874 days' care at a total cost of \$778,959.82. The average cost per diem is approximately 85c.

Each of the institutions is subject to periodic visits by Provincial Inspectors whose reports indicate that the physical care given the children is fairly adequate. Some units have a dearth of recreational outlets and the programmes could be strengthened in a number of cases if more consideration were given to the emotional and cultural development of the children in care.

Each institution, before it may qualify for a Government grant, must be approved under the Charitable Institutions Act. When so approved, it is eligible to receive a grant of 5c or 10c a day per inmate, depending on age. Such grant is paid twice yearly. For the past year \$64,338.07 was paid by the Province in grants.

Several institutions arrange to have their children attend nearby schools thus eliminating the necessity of maintaining a school within the institutional building. This and many other methods are utilized to make the child's stay within the institution as nearly homelike as possible.

B. W. HEISE,

Provincial Superintendent.

REPORT OF REFUGES, HOMES FOR AGED AND INFIRM

The principal aim of all Refuges is to provide a haven for all those aged or infirm who are dependent and require food, shelter, clothing and other necessities.

The Department of Public Welfare advises with all Boards of Management, the Superintendents and Matrons, and all interested persons so that every facility for the betterment of the Refuges may be secured, and charitable and kindly treatment be extended to all residents.

The keen sense of responsibility evidenced by most officials is very gratifying to this Department and all are to be commended and thanked for their excellent co-operation.

The steady increase in the per diem maintenance cost for the last few years may be attributed to the many improvements and additions to main buildings, the installation of fire prevention equipment, new barns, etc.

Below you will find statistical figures for all Refuges:

STATISTICAL SUMMARY

January 1st, 1939, to December 31st, 1939.

	Number Admitted	Number Discharged	Number Deaths	Total Number Pensioners	Average Number Residents

Report of

THE SOLDIERS' AID COMMISSION OF ONTARIO

April 1st, 1939, to March 31st, 1940

Commission Membership	No changes occurred in the membership of the Commission during the fiscal year, April 1st, 1939, to March 31st, 1940, now under review.
Commission Meetings	The several meetings of the Commission have been well attended and all members have shown a keen interest.
Commission Staff	No staff changes have occurred during the period. Prompt and efficient service has been rendered by all members.
Audit	Following the end of the fiscal year, an audit of the books and accounts was performed by a representative of the Provincial Auditor's Department. All books and accounts were reported to be in order and to correctly reflect the operations and transactions of the Commission throughout the year. Financial statements will be found appended hereto.
Wards	Services to wards in general is covered by a special statistical report appended hereto. It will be noted that during the year the number of wards requiring attention from the Commission has been decreased from 49 to 36. This reduction was due to the marriage of 3, the coming of age of 9 and the death of 1. Wards welfare investigations and placements also showed a further decrease this year to 126 compared to 165 for previous year. Again this is due to decreasing number of wards and permanent establishment.
Assistance and Advice to Veterans	<ol style="list-style-type: none"> 1. Emergency grants for the year number 1,595 as compared with 1,975 for previous year. 2. General information and advice services rendered to ex-service men and dependents totalled 2,177 compared with 1,624 for previous year. 3. Office interviews for this period were 5,546 as compared with 6,184 for previous year. 4. Special information and advice re pension claims, War Veterans' Allowance procedure, etc. number 384 as compared to 314.
Kathleen Hammond Estate	The assistance from this fund to widows of veterans, widowed by the war served 157 cases of emergency or special need during the past year as compared with 119 in the previous year. The corpus of this fund was subject to further increases during the year. The more precise definition of the scope of application of this fund as accepted late in the previous year was responsible for increased services during the year under review.
Croft Estate	The Commission were able to secure relief from General Taxation on the one remaining lot of this Estate with the result that income now exceeds carrying charges. Interest in Real Estate in this area is steadily improving.
Garden Land Settlement	In the settlement the muck soil continues to prove highly productive. Difficulties are still being experienced due to Highway Improvement affecting road ditches, this tending to aggravate drainage difficulties. Negotiations with the Highway Department were continued in an effort to find a solution of the drainage problem. Throughout most of the area under crop the quality of vegetables was excellent, but in some areas excessive moisture adversely affected the crops.

The health of the settlers and their families has been generally good, while the drilled well continues to provide a plentiful supply of first class water.

Some vacancies have again occurred in the group of settlers, through retirement from settlement to take up other work, or because of physical incapacities to carry on.

Vacancies thus created have been filled, with the exception of one which was most seriously affected by the drainage difficulty. It is felt that the Settlement is serving a very useful purpose in recreating ambition and interest in the minds of some who have been depressed by unemployment conditions. The Commission has continued its policy of insistence on harmonious and co-operative relations between the settlers, and is of the opinion that such has been reasonably maintained.

Supervision was maintained throughout the planting, growing and harvesting season by a staff member, who spent two days or more each week with the settlers. This served a most useful and helpful service and was very much appreciated by those concerned.

With the increased clearing and larger market at Camp Borden, the prospects of this settlement would be much brighter if the drainage problem could be definitely solved.

General

In reporting on the year under review, we must again gratefully acknowledge the co-operation of the Honourable the Minister, Department of Welfare, for the interest he has shown in the general activities of the Commission and for his helpful co-operation. The Commission also desires again to gratefully acknowledge the co-operation of Veterans Organizations; The Canadian Red Cross Society; I.O.D.E.; The Last Post Fund and all other Organizations and individuals who have in numerous ways been helpful during the year.

Respectfully submitted,

E. A. BAKER, Chairman.

Liquor Control Board of Ontario

454 UNIVERSITY AVENUE,
TORONTO 2, ONTARIO,
FEBRUARY, 14TH, 1941.

TO THE HONOURABLE MITCHELL F. HEPBURN,
Prime Minister and Provincial Treasurer of Ontario,
Parliament Buildings, Toronto 5, Ontario.

Sir:—

I have the honour to submit herewith the Fourteenth Report of the Liquor Control Board of Ontario for the twelve months' fiscal period which ended the 31st of March, 1940.

FINANCIAL STATEMENT

The Balance Sheet, certified to by Messrs. Robertson, Robinson, McCannell & Dick, Chartered Accountants, shows the amount of fixed assets to be \$121,271.10. This amount represents the value of the Board's real estate, consisting of the land and buildings situated at 154 Wellington St. W., Toronto, and 201 Victoria Ave., Fort William, occupied as Warehouses, and, the value of all furniture, equipment and alterations in the various premises occupied by the Board, less depreciation, which, since the commencement of operations in June, 1927, has been provided to an extent of \$1,001,446.32.

Other assets totalled \$3,223,645.25 being comprised of the following items:—

Cash on hand and in transit from branch banks	\$ 248,635.10
Accounts Receivable—hospital charge sales, beer levies, duty recoverable items, freight claims, fines, etc.	257,495.53
Inventories of liquors and supplies	2,701,772.96
Prepaid items	15,741.66

Liabilities amounted to \$2,212,217.96 as follows:—

Accounts Payable—for liquors and supplies, accrued charges, etc.	2,188,751.56
Due Provincial Treasurer—for permit sales and confiscated stock	23,466.40

Two factors contributed to the substantial increase in stock inventory value from \$2,181,229.31 at the previous year end to \$2,701,772.96 at March 31st, 1940. These were:

- (a) Increased Dominion duties on spirits of \$3.00 per proof gallon which applied as from September 3rd, 1939.

- (b) The carrying of greater stocks of imported goods as a precautionary measure against the possibility of prices being raised and deliveries being prevented through enemy action.

Sales of permits during the twelve months amounted to a net figure of \$487,736.38 which with the amount unpaid from the previous year of \$2,133.30 totalled \$489,869.68 of which \$475,000.00 was remitted to the Provincial Treasurer, in accordance with the requirements of the Liquor Control Act of Ontario, Section 18 (2).

The item of \$8,596.72 represents a balance due to the Provincial Treasurer for forfeited liquor, which was purchased by the Board after careful examination, and in accordance with the provisions of Section 132 (2) of the Act.

Contingent liabilities amounted to \$2,410,108.00. These items comprise the value of undelivered orders and, also, the amount of customs or excise duties which will have to be paid on the goods which were in bond on our premises March 31st, when the same are cleared. These items are not chargeable against, nor do they effect the operations of the Board for the period under review.

The Profit and Loss Account shows sales for the twelve months from Liquor Control Board Stores of \$22,820,689.73.

The same account shows a gross trading profit of \$8,642,906.51 with total expenses including depreciation and items written off, of \$1,862,047.59 which resulted in a net trading profit of \$6,780,858.92. This latter sum together with other revenue which amounted to \$3,783,317.97 resulted in a total profit of \$10,564,176.89, which is carried to the Surplus Account.

For the purpose of comparison, the percentage that the cost of stock sold, miscellaneous earnings and expenses and other revenue bear to the sales are given for the fiscal year of 1939 and the twelve months' period herewith reported upon.

The Surplus Account shows a balance at the commencement of the period of \$47,198.57, this being the amount of accumulated profits from previous years' operations which had not been transferred to the Provincial Treasurer. Added to this is the twelve months' profit of \$10,564,176.89, which, together with \$3,677.07 representing sundry adjustments, resulted in an amount of \$10,607,698.39. From this sum, \$9,475,000.00 was remitted to the Provincial Treasurer. The total payments to the Provincial Treasurer during the twelve months were, therefore:—

On Account of Profits	\$9,475,000.00
On Account of Permits	475,000.00
	\$9,950,000.00

Besides the Balance Sheet, Profit and Loss Account, and the Surplus Account a statement showing the Expenses of Administration and Operation (Schedule I) for the twelve months is also attached. Individual percentages which these expenses bear to the total sales are given for the twelve months and also for the preceding fiscal period. On March 31st, 1940, the staff comprised 887 employees, 62 of these being part time or seasonally employed as against 829 permanent and 44 part-time employees at the previous year-end.

In addition, all Liquor Board Stores, Brewers' Warehouses, Breweries and Wineries privileged to sell alcoholic beverages in Ontario, as of March 31st, 1940,

are set forth on Schedule II; a classification of permits and licenses issued appears on Schedule III, and a summary of Authorities, Standard Hotel Licenses and Light Beer Permits issued, cancelled, suspended, surrendered and reinstated during the year with the number operative on March 31st, is set forth on Schedule IV.

SALES

The sale of spirits, beer and wine from liquor stores during the twelve months amounted to \$22,820,689.75. The net value of beer sold from breweries and brewers' warehouses, i.e., exclusive of any charge for containers, totalled \$28,435,819.50. Sales of natives wines made direct to customers from licensed native wine sales offices, and, where permitted, from the winery premises, amounted to \$2,278,767.81.

Following the imposition of higher duties by the Dominion Government in September, 1939, prices were increased. Immediately thereafter, a decrease in the gallonage sales of spirits became apparent.

The following comparative sales statistics are given for the fiscal year under review and also for the preceding twelve months:—

VALUE

	Twelve Months ending March 31, 1939	Twelve Months ending March 31, 1940	Increase or Decrease	Percentage
Domestic Spirits.....	\$13,672,891.65	\$14,257,132.64	\$584,240.99	Inc. 4.2

Total.....	28,013,014	30,562,132	2,549,118	Inc. 9.1

STORES

The number of liquor stores in operation on March 31st, was one hundred and twenty-nine. One new store was opened during the period—Store No. 130, at Bracebridge, on June 29th, 1939.

One store was moved to a new location, i.e.—

No. 40, Kingston—from Market Square to Princess Street on July 26th, 1939.

BREWERIES AND BREWERS' WAREHOUSES

On March 31st, 1940, there were twenty-two Ontario and four Quebec breweries licensed to sell their products in Ontario.

Two Ontario Breweries were closed during the year—Ace High Brewery, Guelph, on April 27th, 1939, and Hofer Brewing Co. Limited, LaSalle, on September 30th, 1939.

The number of Province of Quebec breweries operating through Ontario Brewers' Warehouses remained unchanged from the previous year.

The gallonage of domestic strong beer sold in Ontario during the years 1936 to 1940 inclusive, as computed from the sales records of the Board and with respect to sales to destinations outside Ontario from the monthly reports of the Ontario brewers, was as follows:—

	1936 (12 months) Gallons	1937 (12 months) Gallons	1938 (12 months) Gallons	1939 (12 months) Gallons	1940 (12 months) Gallons
Sales from Liquor Stores' stock Beer orders taken at Liquor Stores for delivery by breweries and brewers' warehouses.....	730,535	668,137	686,716	562,527	558,962
Sales from breweries and brewers' warehouses.....	21,035	21,408	16,025	11,024	13,512
Total Ontario Sale of Domestic Beer.....	20,874,503	22,606,732	25,096,435	24,141,817	26,756,549
Sales to other Provinces.....	21,626,073	23,296,277	25,799,176	24,715,368	27,329,023

The number of Brewers' Warehouses in operation at the year end totalled one hundred and nine, two warehouses being opened during the period—at the following locations:—

111W—Bracebridge—on July 31st, 1939.

110W—Georgetown—on August 17th, 1939.

From June 1st to September 16th, a warehouse was operated at Jackson's Point.

There was one Brewers' Warehouse closed during the year—

102W—3333 Danforth Avenue, Scarboro, on September 29, 1939.

During the twelve months under review, three warehouses were moved to new locations, as follows:—

- 2W—Toronto—from 74 King St. East to 14 Alexander St., as of May 27th, 1939.
 10W—Toronto—from 1852 Danforth Ave., to 2149 Danforth Ave., as of September 29th, 1939.
 87W—Kirkland Lake—from old site Prospect Ave., to new location on Prospect Ave., as of December 5th, 1939.

WINERIES

In co-operation with the Board, the Provincial Department of Health continued its analytical work with respect to the products of all Ontario wineries, for the purpose of ensuring conformity to satisfactory standards. This constant supervision through periodical analyses has resulted in continued improvement in quality in all types of native wine. During the year 311 samples were tested.

In September 1939, the Dominion Government, through an amendment to the Special War Revenue Act, raised the gallonage tax in native wine. As a result of this action, selling prices of native wine were advanced on September 14th, 1939.

No changes in ownership of Native Wine Licenses occurred during the year although the corporate name under which T. G. Bright & Company, Limited, had been licensed was changed on September 29th, 1939 to "Bright's Wines, Limited."

The following transfers of Sales Offices to other premises were authorized during the year:—

<u>Licensee</u>	<u>From</u>	<u>To</u>	<u>Opening Date at New Location</u>
T. G. Bright & Co., Ltd. Niagara Falls	564 Ouellette Ave., Windsor	591 Ouellette Ave., Windsor	August 8th, 1939
The Parkdale Wines Ltd. Toronto	164 York St., Hamilton	1251 Ottawa St., Windsor	December 1st, 1939
Danforth Wines Ltd. New Toronto	1854 Danforth Ave., Toronto	2091 Danforth Ave., Toronto	December 6th, 1939
Danforth Wines Ltd. New Toronto	1076 Lakeshore Rd. New Toronto	828 Lakeshore Rd., New Toronto	December 7th, 1939
Bright's Wines Ltd. Niagara Falls	223½ Yonge St., Toronto	209 Yonge St., Toronto	March 27th, 1940
Bright's Wines Ltd. Niagara Falls	78 Sparks St., Ottawa	186 Sparks St., Ottawa	March 27th, 1940
Welland Winery Welland	268 King Street, Welland	272 King Street, Welland	March 27th, 1940

The following statistics of gallonage of native wine sold have been compiled from the monthly reports submitted to the Board by the respective wineries:—

	1936 (12 months) Gallons	1937 (12 months) Gallons	1938 (12 months) Gallons	1939 (12 months) Gallons	1940 (12 months) Gallons
Sale at Wineries.....	557,645	737,673	861,846	934,361	998,100
Sales to the Board.....	637,521	675,551	690,635	712,783	764,326
Total Ontario Sales.....	1,195,166	1,413,224	1,552,481	1,647,144	1,762,426
Sales to other Provinces.....	1,159,010	1,014,810	1,111,769	1,045,997	1,455,432
Export Sales.....	2,483	4,520	3,581	1,935	2,136
	2,356,659	2,432,554	2,667,831	2,695,076	3,219,994

During the year, the tonnage of grapes used in the manufacture of wine, concentrates, grape juice, and brandy, was 13,679 tons for wine; 2,242 tons for concentrates; 559 tons for grape juice; and 2,370 tons for brandy.

One hundred and eighty-four tons of cherries were also used for wine making.

During the preceding year, 179,940 gallons of native wine were distilled into grape spirit for wine fortification, while during the year under review 176,564 gallons were used for such purposes.

The sale of Canadian Brandy—a product of the Ontario grape—continued in good volume, amounting to 13,859 gallons.

At the close of the year, there were twenty-three winery licenses operative, this number being unchanged from the end of the previous year; direct sales to customers being made from the premises of seven wineries and forty-two branch retail sales shops.

HOME-MADE WINE PERMITS

Regulations designed to check the bootlegging of home-made wine were promoted by the Board and became effective January 1st, 1940. These regulations require that any person manufacturing more than 100 gallons of home-made wine must obtain a permit from the Board. The issuance of these permits commenced on January 10th, 1940, and up to and including March 31st, the end of period under review, 733 home-made wine permits were issued. From the applications submitted, a computation shows that 1,386 tons of Ontario-grown fruit were used in production of the home-made wine covered by the above permits and that 167,178 gallons were made. It is confidently expected that the regulations in question will control the situation and eliminate a lot of abuses heretofore existing.

AUTHORITIES FOR THE SALE OF BEER AND WINE.

Complete details by Municipalities of the number of Authorities which were issued, cancelled, suspended or surrendered during the year, together with reinstatements, are set forth on Schedule IV.

On March 31st, 1940—the end of the fiscal year—there were one thousand, one hundred and seventy-six Hotel Authorities in operation, two hundred and thirty-four Club Authorities, one hundred and ninety-one Military Mess Authorities and one Railway Authority.

Authorities were issued for six months to fifty-one Summer Hotels. Of these, two were extended to an annual basis after payment of the required additional fee.

Effective September 18th, 1939, the fee for Hotel, Railway and Club Authorities was increased from six to seven cents per gallon of beer purchased. No increase was made with respect to the levy on wine bought (5%) and the minimum fee of \$300.00 per annum for full year Hotel and Railway Authorities, \$150.00 for six months' Summer Hotel Authorities, \$100.00 for Social Clubs and \$50.00 for Soldier and Labour Clubs remained unchanged.

The annual fees for Steamship Authorities and Military Mess Authorities were continued at \$50.00 and \$10.00 respectively.

The Board's staff of inspectors visited and reported regularly upon all authorized premises. Full co-operation of Municipal and Provincial Police throughout the Province was obtained and resulted in improved conduct and management of numerous premises. It has been found that, generally, Authority Holders desire to conduct their businesses and properties in strict compliance with the Act and the Regulations but there are a few who are interested primarily in profits without regard to public reaction. These are, however, small in number and are, of course, subject to greater supervision at all times.

PAYMENTS TO MUNICIPALITIES

In accordance with the Act and the governing Order-in-Council, the Board paid to the various municipalities 20% of the fees received from their local hotel authority holders. Three hundred and twelve municipalities participated in this disbursement which totalled \$223,639.75, same being paid May, 1940.

HOTELS

On March 31st, 1940, one thousand three hundred and thirteen Standard Hotel Licenses were effective, of which one thousand one hundred and seventy-six possessed an Authority to sell beer and wine; thirty-eight were holders of Light Beer Permits and ninety-nine held only the Standard Hotel License. There was no change in fees.

As mentioned previously, the Board receives a detailed annual report from its twenty-three Inspectors covering all Hotels in the Province, and additional thereto, conduct reports at least once a month. Further progress has been made towards the improvement of hotel accommodation throughout the Province. Special attention has always been given to the question of fire prevention and the safety of guests. Close contact has been maintained with the officers of the Provincial Fire Marshal's Department and the Department of Health with a view of continuing the improvement of conditions in hotels and other authorized premises.

PERMITS

From April 1st, 1939 to March 31st, 1940, there were 45,016 individual Annual Liquor Permits issued. The sales of Single Purchase Permits totalled 2,732,493. Individual Permits sold to non-residents, valid for a period not exceeding one month, numbered 17. In addition 2,007 Special Permits were issued to Physicians, Druggists, Hospitals, etc.

During the year, the Board continued to give full co-operation to municipal officers and departments administering relief.

In many municipalities relief authorities keep hotels and other authorized vendors of liquor supplied direct with up-to-date lists of persons on relief, and, in keeping with the Board's policy, every endeavour is made to prevent such persons from buying intoxicants.

In accordance with the requirements of the Act, the Board, after thorough investigation, deemed it advisable during the year to issue 3,001 Prohibitory Orders. Such action followed either notification relative to conviction for violation of the Act, or the receipt of a request or recommendation from some interested party, such as a relative, friend, magistrate, police officer, physician, relief officer, etc. These Prohibitory Orders comprised 657 full Board Orders which precluded the individual concerned from purchasing alcoholic beverages from any source, of which 31 resulted from Judges' Orders of Interdiction and 42 from conviction for intoxication while in charge of a motor vehicle. In 71 other cases it was deemed advisable to afford the individual restricted purchasing privileges only.

The remaining 2,273 were Orders which cancelled the individual's privilege to purchase alcoholic beverages for home consumption.

With respect to the 2,273 cases referred to, 859 were the result of convictions having been registered under the Criminal Code of Canada for intoxication while in charge of an automobile. A further 799 followed the conviction of the individual for violation of the Liquor Control Act, and the premises of 578 of these were declared a "public place" within the meaning of the Act. The other Orders were issued as being in the best interests of all concerned according to the judgment of the Board from the available information at hand.

During the year, after full investigation and consideration, it was decided to revoke 350 of the Prohibitory Orders which had been made effective at some prior date.

1,634 Special Permits were issued to Druggists. These Permits allowed the druggist to purchase alcohol in limited quantities for compounding and pharmaceutical purposes and also accorded him the privilege of buying rubbing alcohol for re-sale. The premises of all holders of Druggists' Special Permits were subject to periodical inspection, and, in addition, Druggists were required to file monthly with the Board a report of all rubbing alcohol sales.

Efforts were continued to prevent the use of rubbing alcohol as a beverage and during the year the names of two hundred and forty-eight addicts were posted with all druggists in the larger communities of the Province.

For failure to comply with the Board's Regulations, it became necessary during the year to cancel or suspend eight Druggists' Special Permits.

GENERAL

In conclusion, the Board herewith records its appreciation for the earnest efforts of the Staff throughout the year.

I have the honour to be, Sir,

Your obedient servant,

A. ST. C. GORDON,

Chief Commissioner.

Ontario Department of Agriculture

REPORT

OF THE

Minister of Agriculture

Province of Ontario

FOR THE YEAR ENDING MARCH 31st, 1940

Printed by Order of
THE LEGISLATIVE ASSEMBLY OF ONTARIO

(SESSIONAL NUMBER 21)

ONTARIO

TORONTO

Printed and Published by T. E. Bowman, Printer to the King's Most Excellent Majesty
1940

DEPARTMENT OF AGRICULTURE
PROVINCE OF ONTARIO

TO THE HONOURABLE ALBERT MATTHEWS, LL.D.,
Lieutenant-Governor of Ontario.

MAY IT PLEASE YOUR HONOUR:

I have the honour to submit the Report of the Department of
Agriculture for the year 1939-40.

I have the honour to be, Sir,

Your obedient servant,

P. M. DEWAN,
Minister of Agriculture.

Toronto, March 31, 1940.

PRINCIPAL OFFICERS OF THE DEPARTMENT OF AGRICULTURE

THE HONOURABLE P. M. DEWAN, Minister

W. R. REEK, Deputy Minister

MISS J. M. FRY, Secretary to the Minister

MISS M. S. MARTIN, Accountant

G. I. CHRISTIE, B.S.A., D.Sc.	<i>President, Ontario Agricultural College, Guelph.</i>
C. D. MCGILVRAY, M.D.V., D.V.Sc.	<i>Principal, Ontario Veterinary College, Guelph.</i>
M. C. MCPHAIL, B.S.A.	<i>Principal, Kemptville Agricultural School.</i>
E. F. PALMER, B.S.A.	<i>Director, Horticultural Experimental Station, Vineland.</i>

S. H. H. SYMONS, B. Comm. F.S.S.	<i>Principal Clerk, Statistics and Publications Branch.</i>
J. A. CARROLL, B.S.A.	<i>Superintendent, Agricultural and Horticultural Societies Branch.</i>
L. E. O'NEILL, B.S.A.	<i>Director, Live Stock Branch.</i>
MISS MARY A. CLARKE, M.A.	<i>Superintendent, Women's Institutes Branch.</i>
P. W. HODGETTS, B.S.A.	<i>Director, Fruit Branch.</i>
C. E. LACKNER, B.S.A.	<i>Director, Dairy Branch.</i>
R. S. DUNCAN, B.S.A.	<i>Director, Agricultural Representative Branch.</i>
CHARLES M. MEEK, B.S.A.	<i>Chairman, Milk Control Board of Ontario.</i>
GEO. WILSON, B.S.A.	<i>Director, Co-operation and Markets Branch.</i>
J. D. MACLEOD	<i>Acting Director, Crops, Seeds and Weeds Branch.</i>
L. CAESAR, B.A., B.S.A.	<i>Provincial Entomologist.</i>
L. STEVENSON, B.V., Sc., M.S.	<i>Provincial Zoologist.</i>
T. A. DOUGLAS, B.S.A.	<i>Superintendent, New Liskeard Demonstration Farm.</i>
W. A. MONTCALM, B.S.A.	<i>Superintendent, Hearst Demonstration Farm.</i>

ONTARIO AGRICULTURAL COLLEGE

With the declaration of war in September, the College was faced with new problems. In addition to increased work on the campus, there was a much larger demand on members of the staff from the people of the Province. Individuals, as well as organizations, were giving consideration to production and marketing. They were seeking assistance on better plans and methods. This offered an opportunity to give valuable assistance. Members of the Staff have taken an active part on the Ontario Feed Board, the Ontario Fertilizer Board, Poultry Industries Committee, Animal Nutrition and other committees.

In early September, the Chairman of the National Research Council issued a statement to all universities and colleges urging students to continue their courses and to prepare themselves for the larger work which is bound to come through the years. This appeal met with a most favourable response on the part of the young people. They have taken their work seriously and have applied themselves in an effective manner. A widespread interest was taken in the Canadian Officers' Training Corps which was under the leadership of Major E. W. Kendall, assisted by members of the Staff. The Corps had an enrolment of 254. More than one hundred of this group made plans to take part in the Summer Camp held at London in June.

In January, 1940, courses in Foods and Nutrition were organized for R.C.A.F. chefs with the object of teaching these men the best possible use of army rations. Sixteen chefs are accommodated during each six-week period. In the preparation of the courses, helpful assistance was given by Dr. F. F. Tisdall, Chairman of the Committee on Nutrition of the Canadian Medical Association; Miss V. M. Ryley of the T. Eaton Co., and Miss E. Middleton of the Central Technical School, Toronto. In these courses we have had the full co-operation of the Departments of Animal Nutrition, Macdonald Institute, Animal Husbandry, Horticulture, Bacteriology, Biology, Dairy, Poultry and Trent Institute.

Under the Dominion-Provincial Youth Training Scheme, forty-seven young men took a Two-Weeks Course in Agriculture, February 19 to March 2. These young men were under the leadership of Mr. Alex. Maclaren.

ATTENDANCE

Attendance at the College continues at a high mark. The dormitories, laboratories and classrooms are filled to capacity.

In the general courses in agriculture there was an enrolment of 598. Macdonald Institute had an attendance of 220. The special Two-Weeks Courses in Agriculture, held December 27 - January 9, had a total of 749. The Summer School for Teachers, Dairy Short Course and other courses brought the total enrolment of the year to 2,372.

REPORT OF THE REGISTRAR

(Figures include all students who were in attendance during the period from April 1, 1939, to March 31, 1940.)

General Course	598

Superannuation of Dr. O. J. Stevenson

After twenty-three years of continuous service, Dr. O. J. Stevenson, Head of the Department of English, retired on June 1, 1939. Dr. Stevenson has long been interested in Canadian literature and art and was made a Fellow of the Royal Society of Canada in recognition of the services he has rendered. He is the author of many text books which are in general use in schools of the province. He was editor of the Canadian School Shakespeare and author of "A People's Best" and "The Unconquerable North."

A graduate of the University of Toronto in 1893, Dr. Stevenson was Associate Professor of Education at Queen's University for four years. Later he served as Head of the Department of English, College of Education, Toronto, and in 1916 joined the staff of the Ontario Agricultural College as Professor of English.

Appointment of Dr. G. E. Reaman

Dr. Reaman came to the College as Head of the Department of English on September 1, 1939. He brings to this position a wealth of experience and a deep interest in young people and farm life.

After graduation from the University of Toronto in 1911, Dr. Reaman travelled in the British Isles and on the Continent. In 1920 he took his Doctor's Degree at Cornell University where he specialized in Rural Education and Rural Economics. During the past six years he has served as Principal of the Glen Lawrence School in Toronto where he taught English and Moderns.

Professor E. H. Garrard Heads Department of Bacteriology

On September 15, 1939, Professor E. H. Garrard was appointed Head of the Department of Bacteriology.

Professor Garrard was graduated from the Ontario Agricultural College in 1927 and has been associated with the Department since the fall of 1928. He went to the Central Experimental Farm, Ottawa, on exchange with A. Jones, 1937-38. His time there was spent on research problems relating to bacon spoilage. In 1938, he was granted the M.S.A. degree by the University of Toronto.

Professor Garrard, with outstanding administrative ability, a research worker and a teacher, gives to this Department strong leadership.

Death of Dr. Roland E. Stone

Another great loss has come to the College through the death of Dr. Roland E. Stone, Associate Professor in the Department of Botany.

Dr. Stone had been with the College since September, 1912, during which time he was a force among the students. In his research work in Plant Pathology he gave valuable assistance to farmers. He was an enthusiastic follower of athletics, serving for a number of years as Assistant Coach of the Rugby team.

Dr. Stone was born at Harvard, Nebraska, November 4, 1881. After graduating from the University of Nebraska, he received his Master's Degree from Alabama Polytechnic Institute and later took his Doctor's Degree at Cornell University.

Farm and Home Week

Farm and Home Week, held June 19 - 24, brought to the campus, from all parts of Ontario, more than 17,000 farmers and their families. The opportunity to meet members of the staff and study the work of the various departments is sincerely appreciated. One is impressed with the keen interest shown in the many projects under way and the demand for information. Much evidence is available to show that the time is used to good advantage and that the farm and home practices benefit in a very direct way from the information gained. Farm and Home Week is a demonstration of the extensive contacts made by the College with the farmers of the province.

RESEARCH AND SERVICE

In addition to the work of instruction in the regular and short courses, research, extension and service activities are carried on throughout the year by the various departments of the College. It is the constant endeavour of the College to be of help to the farmers in the solution of their problems. Some projects of interest are briefly summarized here.

The Utility Value of a Pig Brooder

A pig brooder capable of accommodating six sows and their litters, similar to one used with success in the Canadian West, is being tried for Ontario conditions. It is designed to be used in the production of winter-born litters.

Riboflavin

After prolonged investigation, a new method for measuring the riboflavin (vitamin B₂ or G) content of feedstuffs has been developed. The measurement of the variation in riboflavin content of many Canadian feeds will be undertaken as rapidly as possible.

Simplified Diets

In the endeavour to establish a simplified diet for chicks, it has been definitely shown that there is a decided difference in the nutritive requirements of males and females. There is apparently also a considerable difference in the requirements of different breeds.

Spraying Versus Dusting Potatoes

Eight years' experiments indicate that spraying and dusting are about equally effective in controlling fungous and insect pests and increasing yields, if thoroughly done with a high-power duster or sprayer.

Serological Analyses

During the past testing season, 230,256 samples of poultry blood were tested by the agglutination test for pullorum disease. This represents an increase of nearly 20,000 over the previous year.

Preserving Cream with Salt

Salt definitely inhibits oxidase positive bacteria responsible for offensive flavours. Cream preserved by the addition of 7 per cent salt and made into butter scored as high as butter made from normal cream, and in some instances higher.

The European Earwig

This imported insect made its first appearance in Ontario in 1938. Control measures tested in the village of Ayton, in Grey County, gave very gratifying results, demonstrating that this insect can be successfully combatted.

Turnip Aphid Controlled by Nicotine Dust

The turnip aphid, often called the mealy bug, and a real menace to turnip crops in several counties, was successfully controlled by means of either nicotine dust or soap solution.

Flour Testing

In the flour testing laboratory of Trent Institute, chemical analyses, milling tests and baking tests are made on wheat, flour and other baking ingredients.

Breeding Complete Rust Resistance into Oats

From crosses between the leaf rust resistant Erban oats and the stem rust resistant Vanguard an attempt is being made to secure types of oats possessing resistance to both types of rust and to smut.

Breeding Better Grasses and Clovers

Strains have been bred from material gathered in old pastures in Great Britain, Scandinavia and Russia, as well as in Canada and the United States of America. These strains of grasses and clovers are higher yielding, more leafy, disease resistant, winter hardy, and perennial than the common stemmy types now being grown.

Co-operative Testing of Cereal Varieties

The fact that there is no such thing as a best variety or strain for the whole Province of Ontario has received further support through co-operative tests. The real problem appears to be to find a variety or strain best suited to local conditions.

Poultry Disease Control Measures

The past season presented a major disease problem during the hatching and brooding period. Infectious bronchitis and infectious tracheitis were extremely prevalent, and in some cases mortality was very high. Very effective preventive and control measures were developed which proved valuable in checking the outbreaks of infection and should help to prevent future outbreaks.

Easy to Make Farm Cheese

A hard cheese of the Gouda type, resembling the cheddar variety, is very suitable for manufacture on the farm. It requires a relatively short time to make and is ready for use in a few weeks. The methods are simple, and utensils found on the farm can be used.

An Efficient Wax Moth Fumigant

An inexpensive new fumigant, Methyl Bromide, has been discovered for the control of the wax moth. It satisfies all requirements, destroying both eggs and larvae.

Preventing Crystallization in Winter Feed of Bees

The addition of a small percentage of honey to sugar syrup, or *vice versa*, prevents crystallization for a period of at least four months.

Mineral Feeding of Cattle on Pastures

The rather low phosphorus content of certain soil types produces plants low in phosphorous, causing mineral deficiency in the cattle grazing on these pastures. Studies are being conducted on several important grazing areas to determine if the feeding of bone meal will prove beneficial.

Detecting Tampering with Milk

On request of the Milk Control Board of Ontario, the use of the Lactometer and the Babcock Fat Test for detecting tampering with composite samples of milk was studied. It was shown quite plainly that no reliance can be placed on the methods, as only the very grossest interference with the sample can be detected with certainty. Chemical analysis of the sample is necessary to establish the certainty of tampering, and the lactometer cannot even be used as a "sorting test."

COLLEGE FUNCTIONS

Baccalaureate Service

The annual Baccalaureate Service for the graduating classes of the Ontario Agricultural College, Macdonald Institute and the Ontario Veterinary College was held in War Memorial Hall on Sunday, April 2. Rev. Professor G. P. Gilmour of McMaster University, Hamilton, delivered the address.

Convocation Exercises for Students in Agriculture

On Tuesday, May 16, Sir William Mulock, Chancellor of the University of Toronto, conferred degrees on 104 members of the graduating class. Addresses were delivered by Hon. P. M. Dewan, Minister of Agriculture, and the Honourable and Reverend Dr. H. J. Cody, President of the University of Toronto.

Macdonald Institute Graduation

Graduation exercises for students in Macdonald Institute were held Friday, June 16, in War Memorial Hall, when diplomas were presented to 123 graduates by the President of the College. Addresses were given by the Hon. P. M. Dewan, Minister of Agriculture, and Dr. J. B. Reynolds.

Trent Institute Closing Exercises

Closing exercises for students of Trent Institute were held April 5. Dr. Christie presented diplomas to the eight students and Mr. H. E. Trent awarded the special prizes.

Canadian Author Lecture

On Friday, April 14, 1939, the Canadian Author Lecture was delivered in War Memorial Hall by His Excellency, Lord Tweedsmuir. Following the lecture, members of the faculty and their wives, a few of the leaders of the student groups and invited guests were presented to Their Excellencies in Community House. A feature of the luncheon, held in Creelman Hall, was the presentation by Lord Tweedsmuir of the Governor-General's Medal to Mr. Norman H. High (winner for 1938) and Miss Constance M. Davey (winner for 1939). The students of the Ontario Agricultural College made a presentation to Dr. O. J. Stevenson, retiring Head of the Department of English.

Alumni Reunion

The Annual Reunion for graduates of the Ontario Agricultural College and Macdonald Institute was held June 23, 24 and 25, when more than 1,500 people participated in the celebration of the sixty-fifth anniversary of the founding of the College.

Events honouring two former members of the Ontario Agricultural College faculty provided the highlights of the gathering. At a dinner in Creelman Hall, Professor H. H. Dean, for many years Head of the Department of Dairying, was tendered an illuminated address on the occasion of the fiftieth anniversary of the O.A.C. Review. Professor Dean was the first editor of the College publication.

In tribute to the memory of the late Professor W. J. Squirrell, former Head of the Department of Field Husbandry, graduates of Year '33 presented to the College a memorial plaque to be placed in the Field Husbandry Building.

The speaker at the luncheon was Dean H. Harold Hume of the College of Agriculture, University of Florida.

Canadian Author Lecture

On Monday evening, February 19, 1940, the Canadian Author Lecture was given by Mr. Frank D. McDowell, author of "The Champlain Road." Another important feature of the evening was the University of Toronto Symphony Orchestra.

The proceeds from this lecture were used to purchase a painting for Massey Library, "The Road to Maple Lake," by H. S. Palmer, O.S.A.

SCHOLARSHIPS AND GIFTS

Lieutenant-Governor's Medal

A silver medal has been donated by the Honourable Albert Matthews, LL.D., Lieutenant-Governor of Ontario, to be awarded to the student doing the most outstanding work in the Department of Animal Husbandry.

Year '39 — Macdonald Institute Infirmary Fund

Macdonald Institute graduating class of 1939 left a gift of \$310.83 to be used for an Infirmary in connection with Macdonald Institute.

Gift of Organ to O.A.C.

During Convocation exercises, May 16, 1939, the College was presented with a Hammond Electric Organ by Years '36, '37, '38, '39 and the Students' Co-operative Association. The organ has been installed in War Memorial Hall in honour of Dr. O. J. Stevenson.

Perhaps no gift has met a greater need on the campus and is more appreciated by the students, faculty and many friends who attend the programmes held in War Memorial Hall.

Short Course Gift

Students attending the 1939 Winter Short Course contributed a sum of \$108.28 to be used for the purchase of silver for the use of the College.

Gift from Professor Dan Jones

Professor Dan Jones, formerly Head of the Department of Bacteriology, gave to the College an oil painting of His Majesty, King George VI. The frame for the picture was a gift of the 1939 Short Course group. The painting, which is the work of Professor Jones, is now hanging in Creelman Hall.

ONTARIO VETERINARY COLLEGE

CONVOCATION

At the Convocation of the University of Toronto, held on May 12th, 1939, the Chancellor, The Rt. Hon. Sir William Mulock, P.C., K.C.M.G., M.A., LL.D., conferred the degree of Bachelor of Veterinary Science (B.V.Sc.) on sixty-five graduates. The Hon. P. M. Dewan, Minister of Agriculture, addressed the graduating class.

COMMENCEMENT

The Annual Commencement and Presentation of Prizes took place on November 22nd, 1939, in the Assembly Hall of the College. The Hon. P. M. Dewan, Minister of Agriculture, in his address to the students, emphasized the value of education in the development of self-control and good character. A. E. Cameron, V.S., M.C., Veterinary Director General, also spoke briefly on the importance of the veterinary profession in public service. The prizes won by students were presented by R. W. Gladstone, M.P. for South Wellington. He congratulated the prize winners and urged them to prove worthy of their awards and to be helpful to others.

STUDENT ENROLMENT

A total of 261 students were in attendance. As in former years, students were enrolled from all the Provinces of Canada. The requirements for entrance and graduation have been raised in order to regulate the attendance more effectively.

COURSES OF STUDY AND INSTRUCTION

The prescribed course of study for the degree of Bachelor of Veterinary Science (B.V.Sc.) extends over a period of five years. In the case of candidates submitting Pass Matriculation certificates, they may be admitted to the first year, while candidates submitting Honour Matriculation certificates, or who have completed one or more years in a recognized college or university may be admitted to the second year of the five-year course.

A detailed outline of the entrance requirements and the course of studies is contained in the college calendar, which is available to those interested. In addition to the regular undergraduate course outlined in the calendar, special short courses were provided as follows:

SPECIAL PUBLIC HEALTH COURSE

During the month of May an arrangement was made whereby the staff of the Department of Health provided a course in Public Health Work for graduate veterinarians. There were 65 in attendance and the subjects of instruction were as follows:

- Public Health Administration.*
- Principles of Sanitation.*
- Communicable Diseases.*
- Food-Borne Infections.*
- Interpretation of Laboratory Findings.*
- Bacteriology of Enteric-Infections.*
- Human Parasitic Infections.*
- Inspection of Water Supplies.*
- Inspection of Sewage Disposal.*
- Inspection of Restaurants and Bottling Plants.*
- Industrial Hazards in Meat Packing Industry.*
- Ventilation and Fumigation.*
- Dairy Sanitation.*

SPECIAL COURSE FOR FUR BREEDERS

During the month of June a course was provided for those engaged in the rearing of fur-bearing animals. About 110 fur breeders attended. The course was arranged in co-operation with the Ontario Fur Breeders' Association and comprised lectures and demonstrations on the following subjects:

- Mink Mating and Its Preparation.*
- Mink Raising Problems.*
- Problems in Making Good Pelts.*
- Mink Pelts Demonstration.*
- Research Work With Fur Animals.*
- Food Poisoning Investigations.*
- Projects at Government Illustration Stations.*
- Principles of Fox Breeding.*
- Fox Raising Problems.*
- Controlling Disease in Fur-Bearing Animals.*

SPECIAL COURSE FOR VETERINARIANS

During the month of July a special course for graduate veterinarians was provided in co-operation with the Ontario Veterinary Association. There were approximately 125 in attendance and the programme comprised the following topics:

Chemical Tests for Urinalysis.
Encephalomyelitis of Horses.
Plans for the Control of Bang's Disease.
Treatment and Control of Parasitic Diseases.
Modern Methods Employed in the Sanitary Control of Dairy Products.
Enteritis of Cats.
Kennel Management and the Control of Distemper.
Diseases of Swine.
Regional Anatomy for Intravenous Medication.
The Relationship of Faulty Nutrition to Disease.

During the months of December and January a series of lectures and demonstrations were given to students attending the Farmers' Short Course and Dairy Course at the Ontario Agricultural College. The course embraced the following topics:

Prevention and Control of Animal Insect Pests.
Mineral Deficiencies Affecting Farm Animals.
Preventable Diseases of Horses and Cattle.
Preventable Diseases of Sheep and Swine.
Care and Management of Breeding Animals.
Care and Management of the Young at Birth.
Cleaning and Disinfection of Stables.
Examination of Horses for Soundness.

RESEARCH AND INVESTIGATION

During the year, considerable time was devoted to research and investigational work. Some of the diseases receiving attention are briefly summarized herewith and detailed reports relating thereto are appended separately.

Malignant Equine Influenza: Two outbreaks of influenza affecting horses were found to be of unusual interest on account of their malignant character. A report of these is appended.

Isolation of the Virus of Equine Encephalomyelitis by Blood Culture: A report is submitted describing a method for the isolation of the Eastern strain of encephalomyelitis virus. The chief advantages of the method are that the virus may be isolated during the course of the disease, hence the isolation and diagnosis may be made much earlier than when post-mortem methods are employed.

Fatalities Among Piglets Due to Overdoses of Iron: Quite frequently losses have been reported among suckling pigs following the administration of reduced iron as a preventive against anemia. In all of the cases investigated, the amount of iron had been far in excess of the prescribed dose. Experiments made indicate that even a fairly large dose of reduced iron does not have a fatal effect upon perfectly healthy pigs. However, pigs with poor resistance or which have a sub-clinical infection may succumb rapidly to an overdose.

Prevailing Diseases of Swine: During the year, more especially throughout the fall and winter months, diseases of swine were particularly stressed. The diseases which most frequently came under observation were hog cholera, swine erysipelas, necrotic enteritis, and swine plague. A report is submitted dealing with some of the important aspects of swine diseases.

Experimental Hemorrhagic Septicemia in Swine: A large number of experiments have been undertaken to produce typical hemorrhagic septicemia infection in swine. These experiments indicate that it is extremely difficult to reproduce in healthy swine a disease comparable to the natural infection with hemorrhagic septicemia. The results are described in an appended report.

Fatal Anaphylaxis Following the Use of Anti-Hemorrhagic Septicemia Bacterin: Two occurrences of severe fatal anaphylaxis are described involving the loss of several animals. Attention is drawn to the seriousness of such unfortunate consequences during immunization and the necessity for guarding against anaphylactic shock is emphasized.

Stiff Lamb Disease and Aphasphorosis: An outbreak of disease among lambs is reported which responded to the administration of large doses of phosphoric acid. The resemblance between stiff lamb disease and acute phosphorus deficiency is noted.

CLINICAL AND EXTENSION SERVICE

This service has been developed to meet the needs of veterinarians and owners requiring assistance. The nature and extent of the services rendered are briefly summarized as follows:

Animal Clinics: Clinics are held each week throughout the College session to which animals of all classes may be brought for observation. All animals are carefully examined and medical treatment is prescribed and surgical operations performed as may appear desirable. The greater part of the clinical service is furnished during the session when the students are in attendance. Several case reports are appended to illustrate the scope of this useful work.

Horses: The majority of these were surgical cases, of which 175 were successfully treated. Approximately 100 visits were made to extend treatment to horses at the Ontario Agricultural College. In addition, 62 horses were vaccinated against virus encephalomyelitis.

Cattle: Many of the cattle cases represented herd conditions. Among the diseases predominating being Bang's disease, sterility, mastitis, calf scours, calf pneumonia, Johne's disease, actinomycosis and hemorrhagic septicemia.

In co-operation with the various live stock breeders' associations, definite plans have been arranged for the control of Bang's disease on an experimental basis, as follows:

1. By testing individual herds and segregating or removing the reactors.
2. By testing herds in prescribed areas and removing all reactors.
3. By the adoption of calthood vaccination in badly affected herds.

A total of 25,519 cattle were tested under these plans and the results are contained in a separate report.

Swine: There has been a marked increase in the number of swine cases. These comprised surgical cases and many diseases affecting litters and herds. Among the diseases predominating were anemia of young pigs, gastro-enteritis, pneumonia, parasitism, nutritional deficiencies, hemorrhagic septicemia, swine erysipelas, necrotic enteritis and hog cholera.

Sheep: The majority of these cases represented flock maladies and comprised parasitism, hemorrhagic septicemia, goitre, nutritional imbalances, pregnancy and lambing troubles.

Small Animals: Over 200 dogs and cats were submitted to the clinic for examination and treatment. While the majority were surgical cases, there were also a large number of disease conditions treated, including mange, eczema, distemper, chorea, gastritis, and dietary conditions.

Fur-bearing Animals: The diseases and general welfare problems of fur-bearing animals on ranches were given all possible consideration. Considerable investigational work was undertaken relating to losses occurring on mink ranches in York and Perth Counties. The disease proved to be distemper. The experimental use of hyperimmune serum and tissue vaccine as agents in the control of distemper was tried in both mink and ferrets but they appeared to be of doubtful value. Diagnostic work was also undertaken in the examination of specimens sent in for laboratory examination. The material submitted included food substances and fecal matter from fur-bearing animals. The laboratory work also included autopsies on 142 animals as shown in the following outline:

Nature of Case	Fox	Mink	Rabbit	Total
<i>Parasitism</i>	3	9	2	14
<i>Pneumonia</i>	4	21		25
<i>Food Toxemia</i>	4	32		36
<i>Peritonitis</i>		4		4
<i>Uraemia</i>		13		13
<i>Distemper</i>		20		20
<i>Metritis</i>		2		2
<i>Nutritional Anemia</i>		10		10
<i>Streptococcus Infection</i>		4		4
<i>Dermatitis</i>	1			1
<i>Goitre</i>	2			2
<i>Vitaminosis</i>	2			2
<i>Acute Gastritis</i>	2	1		3
<i>Encaphalitis</i>	1			1
<i>Intestinal Block</i>		1	1	2
<i>Acute Enteritis</i>		1		1
<i>Hæmorrhage</i>		2		2
Total	19	120	3	142

A further service was rendered by the preparation and distribution of the following circulars to those interested in fur-bearing animals:

- Pneumonia in Mink.*
- Distemper in Mink.*
- Streptococcus Infection in Mink.*
- Mink Breeding.*
- Acidosis in Mink.*
- The Magot Fly.*
- Nursing Mothers and Young Mink.*
- Coccidiosis in Mink.*
- The Raccoon.*
- The Care and Management of Rabbits.*
- Diseases of Rabbits.*
- Urinary Calculi in Fur Bearers.*
- Guinea Pig Breeding.*
- Chinchilla Breeding (chinchilla lanigera).*

BIOLOGICAL LABORATORY SERVICE

Preparation of Antigen: Ninety-six thousand six hundred test doses of *S. pullorum* antigen, and positive and negative control sera, were prepared and supplied to registered veterinarians for the agglutination test of *S. pullorum* infection. Seventeen thousand test doses of *Br. abortus* antigen were distributed to veterinarians for the agglutination test for Infectious Abortion of cattle (Bang's disease).

Agglutination Tests: During the year, 25,519 blood samples were submitted to the agglutination test for Bang's disease. Included in this number are 3,153 from cattle intended for export or exhibition purposes, and 3,933 from cattle in herds under Ontario Veterinary College supervision.

The results of these tests are as indicated in the following table:

Number of Samples tested	25,519
“ “ “ positive	3,802
“ “ “ doubtful	1,487
“ “ “ negative	19,899
“ “ “ unfit for testing	331

ROUTINE EXAMINATIONS OF MILK AND CREAM SUPPLIES

Routine tests were made on 240 samples of milk and cream submitted to the laboratory from time to time. These tests included fat determinations, agar plate counts, coliform tests, methylene blue and resazurin reductase tests and phosphatase tests.

PATHOLOGICAL AND BACTERIOLOGICAL EXAMINATIONS

During the current year 863 specimens were received for laboratory examination, as indicated in the following table:

Nature of Case	Cattle	Sheep	Horses	Swine	Dogs	Cats	Rabbits	Birds	Goats	Fox	Mink	Water	Feed Samples	Meat	Totals
<i>Parasitic Infestation</i>		3	1												4
<i>Coccidiosis</i>	3														3
<i>Ncoplasms</i>	1	2	4		33										40
<i>Pasteurella Infection</i>	4	10	1	68					2						85
<i>Brucella Infection</i>	12														12
<i>Necrophorus Infection</i>	1	1		3											5
<i>Salmonella Infection</i>				9				3		1	4				17
<i>Streptococcic Infection</i>			1	11											12
<i>Influenza</i>			8	16											24

POULTRY LABORATORY SERVICE

This consists chiefly in the routine examination of diseased poultry sent or brought to the Laboratory. No serious outbreaks of disease were encountered, but the incidence of coccidiosis, pullorum disease of chicks and nutritional ailments remains at about the same level. In a great many instances these conditions could have been prevented if proper control measures had been employed.

Advice is always given as to the handling of the flock to prevent the spread of infectious diseases.

The number of specimens received during the past year is greater than that of the previous year and the diseases dealt with are shown in the following list:

Nature of Case	Number of Cases
<i>Adult Pullorum Infection</i>	130
<i>Ascites</i>	21
<i>Avian Diphtheria</i>	3
<i>Cloacitis</i>	2
<i>Coccidiosis</i>	388
<i>Coryza and Roup</i>	41
<i>Enteritis</i>	27
<i>Enterohepatitis</i>	74
<i>Fowl Cholera</i>	40
<i>Laryngotracheitis</i>	30
<i>Leucosis</i>	100
<i>Pullorum Disease of Chicks</i>	568
<i>Tuberculosis</i>	33
<i>Other Infections</i>	74
<i>Egg Bound</i>	4
<i>Internal Laying</i>	23
<i>Impaction</i>	13
<i>Injuries</i>	12
<i>Nutritional Disorders</i>	490
<i>Poisoning</i>	4
<i>Prolapse</i>	13
<i>Ruptured Liver</i>	22
<i>Ruptured Oviduct</i>	3
<i>Tumours</i>	69
<i>Worm Infestation (Ascaridia)</i>	66
“ “ <i>(Capillaria)</i>	40
“ “ <i>(Large Tapeworms)</i>	46
“ “ <i>(Minute Tapeworms)</i>	149
“ “ <i>(Ascaridia and Tapeworms)</i>	52
<i>No Evidence of Disease or Putrid</i>	120
<i>Total</i>	2,657

Throughout the year an immense volume of correspondence has received attention, as well as daily personal interviews with those seeking advice. The demand for veterinary services, including research and extension work, has noticeably increased.

The entire Staff has been busily engaged and have performed their duties faithfully. A high standard of efficiency has been maintained throughout, and all expenditures have been carefully supervised and kept at a minimum cost to the Province.

KEMPTVILLE AGRICULTURAL SCHOOL

The Kemptville Agricultural School enjoyed a successful year, judging by the interest of rural Eastern Ontario visitors to the School and requests for assistance along the lines of Animal and Field Husbandry, Horticulture, Poultry, Home Beautification, Soil Testing, Dairying and Home Economics. During the year 26 agricultural groups visited the School.

The new Dairy Building assisted in correcting the crowded condition of the classrooms and provides up-to-date equipment for the Butter and Cheese Courses, and laboratory space for Dairy Research.

The attendance in the different courses was as follows:

Agricultural Senior Year (Two-Year Course)	24
" Junior Year (Two-Year Course)	18
" Short Course	53
Public and Separate School Teachers' Summer Course	178
 Home Economics:	
Homemakers' Course (One Year)	13
Home Economics (Two-Year Course)	8
Cheese and Buttermakers' Course	37
Total	331

An Extension Service was maintained and considerable assistance given to the Agricultural Representatives, Women's Institutes, and Agricultural, Fruit and Vegetable, Dairying and Home Beautification groups.

A Field Service in Soil Testing, Drainage, Poultry Diseases, Field Husbandry, Livestock, Orchardring, Home Beautification and Cheese and Buttermaking was also maintained. More requests were received than could be accommodated. Each student was visited at his home and advice given on the planting of the farm grounds and lawns.

The K. A. S. Royal Show showed a continued improvement over past years. Special mention should be made of the exhibits in Agricultural Engineering, Livestock Showmanship, Field Husbandry and Educational Displays.

The Kemptville Agricultural School wishes to acknowledge the assistance and co-operation given to the School by the Agricultural Representatives Branch, Dominion Experimental Farm Services, Ontario Women's Institute Branch, Ontario Livestock Branch, Dominion Health of Animals Branch, Dominion Economics Branch, Dairy and Cold Storage Branch (Ottawa), Ontario Field Crops and Weeds Branch, Dominion Production Services, and the Agricultural and Weekly and Daily Press.

Scholarships were donated to the students by Ottawa Farm Journal; Geo. T. Fulford, M.P., Brockville; Rt. Hon. Geo. P. Graham, Brockville; W. B. Reynolds, M.L.A., Brockville; J. I. Robinson, Vice-President, Crane Ltd., Montreal; Rotary Club of Prescott; Ottawa Kiwanis Club; Renfrew Junior Farmers; Leeds-Grenville County Council; W. B. George, B.S.A., Kemptville; Stormont Ayrshire Breeders' Association; Glengarry Holstein Club; Lanark Junior Farmers; Glengarry Junior Farmers; Carleton Boys' Clubs; Montreal Provisions Trades Association of the Montreal Board of Trade.

HOME ECONOMICS DIVISION

Eight students were in the Senior Year in Home Economics and 13 girls in the Junior and Homemaker Classes. During the year several graduates found interesting employment. There is an increasing demand for girls with training to fill positions in the tourist business.

The Clothing Laboratory has been brought up-to-date with efficient cutting tables and modern type lighting fixtures. A plan for renovating the Foods Laboratory has been commenced with the installation of two unit kitchens.

The curriculum of the Department has been adjusted to meet the war-time circumstances, with stress placed on healthful living and efficient expenditure of money. The students have been taught knitting and war-time sewing, and have made a contribution to war work.

The Clothing Laboratory has been available to local women for Red Cross sewing.

The Staff conducted lectures in the Home Economics field, supervised the students' residence and in addition have taken part in rural women's activities. The meetings attended were District and Area Conventions of the Women's Institutes and local Institute Branches and Clubs. Meetings attended during the year were 47, with a total attendance of 2,400.

DIVISION OF ANIMAL AND FIELD HUSBANDRY

Pure Bred Livestock

The purchase of the young Ayrshire herd sire, Pine View Ferdinand (221307), was the outstanding addition made to the livestock during the year. The Ayrshire herd was further strengthened by securing two "typey" young cows.

The Holstein Herd continues to show steady improvement in type and production. During the year 8 mature cows were entered for Selective Registration and graded 4 Gold Medal and 4 Excellent.

All milking females of Holstein, Ayrshire and Jersey breeding are entered in R.O.P. and during the year 16 cows and heifers qualified.

The Pure Bred Yorkshire Herd made a very satisfactory showing during the year. The demand for Pure Bred breeding stock was particularly keen and during the year 47 sows and 32 boars were sold.

Commercial Livestock

During October nineteen head of grade beef heifers were purchased, with a three-fold purpose in mind:

1. To provide satisfactory breeding and market classes for judging purposes with the regular students; a limited number to be used for slaughtering.
2. To demonstrate proper methods of handling and showing, as well as caring for and feeding beef cattle.
3. To provide a means of marketing surplus hay and ensilage grown on the School farm.

The lot consisted of 6 Aberdeen Angus, 6 Hereford and 7 Shorthorns, and during the winter months they were periodically weighed and a check made on their gains.

Following is a summary of the crops produced:

Alfalfa and Mixed Hay	215 tons
Erban Oats	1,330 bushels
Alaska Oats	800 bushels
O.A.C. No. 21 Barley	310 bushels
Coronation Spring Wheat	25 bushels
Dawson's Golden Chaff Fall Wheat	33 bushels
Mixed Grain	3,000 lbs.
Ensilage Corn	268 loads
Irish Cobbler Potatoes	860 bushels
Mangels	105 tons
Turnips	22 tons
White Carrots	2 tons

SEED CLEANING PLANT

Small Seeds

Sweet Clover	63,031 lbs.
Alfalfa	53,533 lbs.
Timothy	25,384 lbs.
Red Clover	14,866 lbs.
Mixed Clover and Grass Seeds	6,523 lbs.

Grains

Oats	80,993 lbs. (2,382 bus.)
Barley	23,527 lbs. (490 bus.)
Wheat	8,352 lbs. (139 bus.)
Flax	8,741 lbs. (156 bus.)
Beans	9,137 lbs. (152 bus.)
Millett	6,200 lbs. (124 bus.)
Peas	1,212 lbs. (20 bus.)
Buckwheat	598 lbs. (12 bus.)
Rye	380 lbs. (6 bus.)

Number of farmers using Plant — 250.
Approximate receipts — \$885.75.

Lecture Course

During the year this Division gave a course of lectures to the regular students, Short Courses and Summer School, in Animal and Field Husbandry, and attended 17 Field Days, 53 meetings and judged at 15 Fairs.

DIVISION OF CHEMISTRY, SOILS AND FERTILIZERS

In 1939 a beginning was made at Merrickville in conducting a Permanent Fertility Experiment which will be continued throughout an entire crop rotation. Two additional locations at Bainsville and Jellyby were selected to commence in 1940.

In co-operation with the Cereal Division of the Central Experimental Farm, 12 testing plots were laid out in Eastern Ontario from Hastings County east. At 7 of these locations fertility tests were conducted, using 3 fertility treatments on 2 varieties of oats and 3 varieties of barley.

Demonstrational plots were laid out and supervised with results taken and the residual effect of fertilizers recorded from selected farms throughout Eastern Ontario. This work was carried out on Cereals, Corn, Potatoes, Turnips and Pasture.

Soil Testing Service was given to all who forwarded samples—with over 800 samples tested, and recommendations made on results obtained. This service is increasing. Several farmers are returning for an annual test.

During the year 8 Short Courses were addressed, with an attendance of 247, and 13 Field and other meetings with an attendance of 1,480.

DIVISION OF AGRICULTURAL ENGINEERING AND DRAINAGE

This Division acted as Drainage supervisor in Eastern Ontario, working under the direction of the Drainage Department, Ontario Agricultural College, Guelph, Ont. During the year 68 visits were made, of which 34 were advisory, 2 inspections totalling 30,245 ft. of drains and 32 preliminary surveys for which 70,837 ft. of profile were made. In addition, 150 acres were systematically surveyed, thereby laying out 91,102 ft. of drains.

A successful Drainage Demonstration was held during the Provincial Plowing Match at Brockville and in Glengary County. The Tile Drainage Act is being used to a greater extent by farmers in Eastern Ontario.

During the year equipment was added to this Division, which included miscellaneous tools to make more complete the equipment for woodworking and mechanics. The Massey-Harris Co. replaced their No. 101 Senior Twin Power Tractor with No. 101 Junior Twin Power Tractor. The Ford Motor Co. placed with this division their Ford-Ferguson tractor with plow attached for class purposes.

Explosives Demonstration, October 1939

Through the co-operation of the Canadian Industries Limited, instruction and practice was given to the Senior Class in the handling of explosives and their use in blowing out stumps and breaking stones.

Tractor Demonstrations

Expert mechanics from the Massey-Harris Company and the Ford Tractor Company demonstrated their tractors to the Senior Students.

During the year 12 meetings were attended.

POULTRY DIVISION

The usual lectures were carried on with the regular students in Agriculture, the Short Course and the Teachers' Summer School. During the year considerable extension work was carried on: Farmers' Meetings attended, 15; Short Courses, 9; Boys' and Girls' Poultry Club visits, 14; School Fairs judged, 7; Fall Fairs judged, 2; Farm visits re disease, etc., 102. Total attendance at meetings, 2,475 people.

Some further work is being carried on toward improving the Poultry Plant.

The new Course of Lectures and practical work in Farm Meats proved very interesting to the students, and this work is handicapped by lack of facilities and equipment.

DIVISION OF HORTICULTURE

During the course of the School year, lectures and related laboratory work were given to the students in Agriculture, in Horticulture, Botany, Plant Pathology, Entomology and Genetics, and selected work to students in Household Science and Short Courses.

During the early spring and again during the late summer months, visits were made to the farm homes of students in Agriculture then registered at the School. The first visit was made to discuss with student and parents the possibility of improving and in some cases re-arranging the farm home surroundings. The second visit was made with the object of

noting the progress that had been made, and possible difficulties that may have arisen. These visits seemed to meet with marked appreciation, interest and co-operation.

The "hardy" or "double-worked" orchard, started three years ago, was added to with further new stock given by the Division of Horticulture of the Central Experimental Farm, Ottawa. The trees first planted are now being "worked over" to some of the varieties particularly recommended for Eastern Ontario conditions.

A considerable number of herbaceous perennials were distributed to rural schools.

Illustrated lectures were given to a number of organizations, Horticultural Societies and Clubs on a variety of subjects, as well as several practical demonstrations.

Further assistance was given to a number of orchardists and vegetable growers in dealing with sprays or other suitable means of control for certain outbreaks of diseases or injurious insects.

A word of thanks for donations of material, in the form of trees, shrubs and seed for trial purposes, mentioning particularly the Horticultural Division at Ottawa, who have enabled us to grow a fairly representative selection of new varieties of apples, strawberries and pears.

DIVISION OF DAIRYING

The 46th Dairy Course had a full attendance of 37. Six late applications to take the course had to be refused owing to lack of accommodation. The new Dairy Building, which will be completed for the next term, will provide room for all applicants. Thirteen Counties were represented: Addington 1, Carleton 3, Dundas 1, Frontenac 3, Glengarry 7, Grenville 2, Hastings 5, Lanark 5, Leeds 2, Lennox 2, Prescott 1, Russell 2, Stormont 3.

During the Course seven special dairy lectures were given by members of the Federal and Provincial Dairy Branches with instruction on butter and cheese grading by the Federal Grading Staff. About 40 visitors attended these lectures.

Two changes were made on the Dairy Staff, D. Connell, Instructor in Cheesemaking, and G. Pollard, Instructor in Milk and Cream Testing, succeeding J. F. Robinson and H. B. Sandwith respectively, who received promotions to other positions.

The Montreal Provision Trades Association, Branch of the Montreal Board of Trade, again donated \$100 to be distributed in prizes as an encouragement to the students and recognition of the valuable work carried on by the School.

Cheesemakers Short Courses were attended at Selby (near Napanee) and Casselman during the month of April.

During the summer the general plans for the new Dairy Building were completed.

Work as required by the Dairy Branch was carried out during the spring, summer and autumn. This included visits to 52 cheese factories, addresses at 17 Buttermakers' and Cheesemakers' Clubs and other meetings.

HORTICULTURAL EXPERIMENT STATION VINELAND

RESEARCH PROJECTS

A Study of the Extent to which Apple Orchard Cultivation may Economically be Reduced: In the Report of the Minister of Agriculture for the year ending March 31, 1939, a chart is given to show the yields of five apple varieties in an experiment comparing cultivation until May 15 with cultivation until July 15, followed in each case by seeding to a green manure crop. In the fall of 1939 it was necessary to remove the remainder of the two filler varieties, Duchess and Wealthy. The following chart (Fig. 1) shows the size, as measured by area of cross section of trunk, and yield per tree in pounds, for these two varieties. The numbers of trees of Duchess and Wealthy represented in the chart are the same—Regular Cultivation, 12; Regular Cultivation plus manure, 3; Minimum Cultivation, 12; Minimum Cultivation plus manure, 3. (A slight difference will be noted in the 1929-35 yield between the two charts. In the 1938-39 report all trees were included. Here only those remaining until the fall of 1939 are used.)

Apart from the differences due to cultivation, the natural differences between the two varieties are of interest. Wealthy is the much larger tree as gauged by area of trunk cross section but Duchess has produced more fruit. The extra yield and growth response of Duchess where manure was applied may be due to this plot being naturally poorer at the beginning.

With Duchess yield responses from manure have been quite striking. Heavy applications of commercial fertilizer had been given this orchard without any appreciable results. In the fall of 1935 a heavy application of manure (20 tons per acre) was given to plots 2, 3, 6 and 7. During 1936 there was little evidence of a growth response. For this reason the same application was repeated in the fall of 1936. During 1936 the growth response was quite pronounced in the green manure crops and was reflected to some extent by the appearance of the trees in the autumn. Realizing, therefore, that the soil was poor, another application of 20 tons per acre was given to these plots in the fall of 1937 and 30 tons per acre to the remainder of the orchard. In the fall of 1938 the whole orchard was given another 20 tons of manure per acre. Thus the manure plots, beginning with the fall of 1935, have received 80 tons of manure per acre, while the other plots, beginning with the fall of 1937, have received 50 tons of manure per acre. Judging from results from earlier applications, there would probably be little effect up to 1940 from the 50-ton application to plots 1, 4, 5 and 8. Manure has increased the growth of these trees more than their yields but, as the former result comes first, yield differences would undoubtedly have followed had it been possible to leave these trees in the orchard.

In this chart the yields for the regular cultivation plots (July 15) are shown to be very definitely ahead of those receiving minimum cultivation except for the Duchess plus manure plot. The differences between treatments at the end of 1938 were not so striking. For Duchess the yields were almost the same. The change in result is brought about by the presence of a partial biennial bearing habit, the "on year" differing under

cultural treatments. For the standard varieties, when records for a sufficient number of years have been accumulated, this difference should iron itself out pretty well. With these filler trees, however, their removal renders it impossible to gather further data, making necessary the acceptance of the figures as they are. We are, however, pointing out that the relative differences in yields have fluctuated between years. With this in mind, one should probably estimate the real differences in yields between plots as about somewhere between those shown in Fig. 1. When one considers the extra cost of production (approximately two months extra cultivation) and the reduction of fruit colour and finish this extra yield would seem to be of doubtful economic gain.

The response from the application of manure would seem to indicate that manure could well be substituted for cultivation in many orchards of low fertility. The use of manure has not only increased yields but the soil improvement itself is appreciable. Cost of manure has deterred many growers from using it but if a goodly proportion of its cost could be charged against the cultivation which is regularly done the net cost would be much less.

FIGURE 1

Average area of cross section of trunk and yield of Duchess and Wealthy Apples under minimum and regular cultivation treatments with and without barnyard manure.

FRUIT BREEDING

The fruit breeding programme was dealt with in some detail in the report of the Station for the year ending March 31, 1938. The present report deals simply and briefly with the value of certain Station seedlings for quick freezing purposes.

Quick Freezing Tests. The present importance of fruits which are satisfactory for preservation by quick freezing methods, together with the fact that most known varieties are not particularly suited to this purpose, led to a systematic freezing test of all of the seedlings and named varieties of fruits produced at this Station. This was a co-operative enterprise with the Department of Horticulture of the Ontario Agricultural College.

Special attention was given to peaches, strawberries and sweet cherries because there was a special need for good freezing varieties among these fruits both here and in the United States. The result has been the discovery of one particularly satisfactory seedling in each of these fruits and several other varieties which may be classed as reasonably satisfactory for freezing purposes. The seedling strawberry has been named "Van-rouge," and the cherry is called "Velvet." The peach will receive a name this season. All three varieties when frozen have been examined in the United States in competition with available varieties there and there is now no question of their importance in the already large and rapidly expanding industry of quick frozen fruits.

The breeding program with these fruits was not designed to include the establishment of good varieties for freezing but the result of this program to date has been the production of an exceptionally large number of varieties suitable for freezing. This fact has attracted considerable attention and deserves further analysis.

VEGETABLE BREEDING

Asparagus: Selected Mary Washington plants, whose progenies have given the best yields in trial plots, have been divided and re-planted in order to secure an increased supply of seed of these improved strains for distribution and further progeny tests.

Early Cabbage: An early uniform strain of Golden Acre was selfed and seed from one plant is being grown for trial in commercial lots.

Early Tomatoes: Selection work is being continued on the early staking variety Harkness which was developed from an Experiment Station cross. Registered seed of this variety is now available in commercial quantities.

Italian Tomatoes: In addition to the selected hybrids of Italian strains, all of which have well flavoured, medium size, quite firm fruits, several new hybrids were obtained from Jan Ru crossed with large fruited varieties such as Ponderosa, Oxheart, etc. These hybrids which are now in the second generation are expected to produce types desirable for canning for the British market.

Sweet Corn: Considerable progress has been made in sweet corn breeding. Numerous inbred lines have been carried on which eventually will be used for making new crosses.

Seed of seven of our new early hybrids has been produced so that they can be given a second test at this Station but none of this will be available for distribution. If any of these appear to be of real value for commercial growers, seed will be produced in large enough quantities that a more extensive test may be made.

Over thirty pounds of seed of the three most promising Vineland Golden Bantam hybrids has been supplied this year to the Canadian Seed Growers' Association, who will distribute it for a semi-commercial test. One farmer near St. Catharines is producing seed of one of these hybrids (No. 3261) for sale to growers. Also some of the Junior Farmers of Lincoln County are using this hybrid for the production of sweet corn for market and it has been given a very favourable reception by the trade.

Elite or Foundation Stock Seed of the following vegetable varieties is being produced and maintained: Prizetaker onion, Bender's Surprise melon, Hamilton Market and Windsor peppers, Hescrow cucumber, Golden Acre cabbage and Harkness, Bonny Best, Rutgers and Marglobe tomatoes.

VEGETABLE VARIETY AND STRAIN TESTS

Asparagus: The selected strains continue to outyield the commercial seed lots. The difference in favour of larger plants which had been started in the greenhouse and transplanted to the nursery rows has disappeared after three years yield records. This indicates that it is the strain or variety rather than the comparative size of the young plants that should receive first attention when starting an asparagus bed.

Tomatoes: Many strains and varieties of tomatoes are being tested, both for the early staked crop and the later or canning crop. The Harkness is the most popular variety for staking and Chalk's Jewel or Bonny Best for the canning trade. The Rutgers gave much the best yield and held its foliage much longer than did the Bonny Best strains.

Sweet Corn: The usual testing of varieties and hybrids has been carried on and this is becoming more and more necessary as new ones are being offered by the seed houses from year to year.

Now that the value of hybrid corn is being realized by commercial growers there appears to be some danger that the use of hybrid corn will be exploited. It will be well for growers to investigate carefully before paying the higher prices demanded for this type of corn and to remember that hybrid corn is not necessarily better than ordinary corn just because it is *hybrid*. There are poor hybrids as well as good. The former are no good at any price, while the latter may easily be worth double the price of the ordinary run of varieties.

Standard and new varieties of various vegetable crops were grown and observed as to their value for production in Ontario. A few of the outstanding new varieties are as follows: Imperial 44 lettuce, Masterpiece celery, Windsor pepper, Plentiful green bean, Straight Eight cucumber, New Hampshire eggplant, Delicious and Buttercup squash. A good crop of Pole Lima beans was harvested, Carpenteria being one of the best varieties for freezing as well as for yield. The King of the Garden variety gave a good yield but lacked the green color desired.

EXTENSION

Orchard Fertility Studies: Orchard fertility surveys were inaugurated in 1936 and to date the following areas have been surveyed: 1936, Niagara Peninsula; 1937, Elgin, Kent and Essex Counties; 1938, Lake Huron Area (Lambton County); 1939, Burlington-Dixie Area.

During 1939 the fruit-growing areas from Burlington to Dixie and as far north as Milton were surveyed. Data on the type of orchard management, use of fertilizer and cover crops, and the fertility level of the soils were obtained. The area surveyed in 1939 showed rather low nitrate levels as compared with Lambton County area samples the year previous. Practically all the orchards sampled showed phosphate levels medium or higher, while approximately 70% of the orchards showed medium to high potash levels. Calcium levels were good in all orchards sampled. In general, sod orchards showed less nitrates than cultivated orchards but the minerals were about the same.

Seventy-five orchards were sampled in the 1939 survey. Types of orchard management were divided as follows: Sod, 25.7%; Clean Cultivation, 70.3%; Sod Strip, 4.0%. The types of cover crops used were: Weeds, 28.6%; Rye, 39.4%; Buckwheat, 31.7%, and Oats, 5.3%. Sixty-five vegetable soils were also included in this survey. These showed consistently higher levels than the fruit soils, the nitrates being particularly high.

A summary of all the surveys 1936-1939, inclusive, shows that about two-thirds of the farmers are using commercial fertilizers to supplement applications of manure or other crop refuse, whereas the remaining third never use commercial fertilizers. Nearly all the fruit and vegetable men use barnyard manure in varying amounts and a small percentage are supplementing this with crop refuse such as old hay and straw.

Soil Analysis: A total of 427 soil samples from district farmers were analyzed and reports sent out during the past year. For Project 271, "A Study of the Extent to Which Apple Orchard Cultivation may be Economically Reduced," 624 moisture samples were taken and 224 Nitrate Nitrogen determinations were made. For Project No. 361, "Soil Organic Matter Studies," 218 Nitrate Nitrogen determinations were made. 1,168 soil samples were tested in connection with the orchard fertility survey made in the Burlington-Dixie area.

Nursery Inspection for Varietal Mixtures: Over 1,200,000 salable nursery fruit trees were examined for varietal mixtures in the summer of 1939. This is by far the largest number examined in any one of the last 15 years. The trees incorrectly named, slightly over 12,000 in number, or 1% of the total, were either broken down or labelled correctly.

Spray Service: A total of 1,323 growers in the Niagara Peninsula received the Spray Service circulars, 15 of these being mailed to each grower during the spraying season.

Meetings: During the year members of the staff gave addresses at 48 meetings, at which there was a total attendance of 3,209 persons.

WESTERN ONTARIO EXPERIMENTAL FARM, RIDGETOWN

The season of 1939 was a peculiar one for crop production in South-western Ontario. Sufficient rainfall for the crops in some districts produced good yields, while in other districts it was very dry. The rainfall at Ridgetown during the year was a little above the average but the months of May, September and November were much below average insofar as precipitation was concerned.

	<i>Precipitation, 1939</i>	<i>Average 10 Years</i>
January	2.90	2.90
February	5.65	2.42
March	2.69	2.43
April	3.99	3.20
May	1.38	2.36
June	3.89	2.33
July	3.86	3.40
August	2.43	2.36
September	1.41	2.70
October	2.69	2.42
November85	2.19
December	1.31	2.24

The following table gives the yield and acreage of the main crops grown in 1939:

Wheat	1,400 bus.	31 acres
Oats	1,300 "	17½ "
Spring Barley	208 "	4 "
Winter Barley	112 "	2 "
Beans (Pea)	960 "	30 "
Beans (Soy)	81 "	3½ "
Corn	1,200 " (ears)	12 "
Tobacco	4,843 "	3.9 "

LIVE STOCK

Cattle—

During the year we purchased a Shorthorn bull to head the Shorthorn herd. This herd has done very well. One of the heifers we purchased gave over four thousand pounds of milk in her first lactation as a two-year-old. Five other heifers have freshened and some of them are doing very well. Three heifers and one cow were sold during the year and nine calves were born. The Shorthorn herd now numbers twenty-three head.

During the winter of 1938-39 eight Hereford steers were taken in to feed and we were paid 8½ cents a pound for each pound gain, 2,450 pounds or an average of 306 pounds from the first of December to the first of May, and we received \$208.25 for them.

Swine—

Our Yorkshire herd has developed well during the year. Three sows were qualified in Advanced Registration and a number of other litters are now on test. Two young boars were purchased from Advanced Register breeding during the year and one of them is at present being kept as the main sire in the herd.

Thirty-eight young boars were sold for breeding purposes in South-western Ontario during the year, and sixty-seven young sows.

The following table will give a summary of the number of head and prices obtained at the second annual sale:

28 Bred Sows averaged	\$45.21
38 Open Sows	23.53
12 Young Boars	28.08
2 Young Bulls	87.50

EXTENSION WORK

Extension work continues to take considerable time. Ninety-four Agricultural meetings were attended. Thirty-one organizations visited the farm during the year.

SOIL TESTING

Soil testing service continues to be a main activity and brings us into contact with a lot of farmers' problems.

SWINE AND POULTRY PROBLEMS

During the year eighty-five farmers have visited the farm with poultry or hogs for post-mortems. Besides these, twenty-two trips were made to farms for the investigation of disease problems which have been presented. The majority of these troubles was internal parasites but other diseases were found in many cases.

INSECTS AND PLANT DISEASES

There continues to be considerable inquiry regarding insects and plant diseases. Where possible, these problems are handled by the Experimental Farm staff. At other times, a consultation is made with other workers on these problems. It is interesting to note that the campaign against common barberry was proceeded with considerable vigour during the spring of 1939. Considerable benefit has been noted as the 1939 season was freer of rust in fall wheat than any season during the past ten years.

LANDSCAPE WORK

The Experimental Farm continues to give advice on laying out private and public grounds. This necessitates a number of visits being made throughout the year, and plans for tree and shrubbery planting have been submitted to the interested parties.

SEED CLEANING PLANT

The Seed Cleaning Plant continues to be of service to the farmers in the district. While there were not quite as many bushels of grain cleaned as last year, yet there was a greater variety of seed brought to the plant for cleaning. It has been interesting to note that several samples of seed cleaned in our plant won prizes at the Chicago International Show, as well as other Fairs in Ontario.

CROP EXPERIMENTS

The Experimental Farm at Ridgetown has been co-operating with the Field Husbandry Department, O.A.C., Guelph, in conducting a Hybrid Corn test for the past three years. The result of this test has shown that some hybrids are much superior to the open pollinated varieties which have been grown in Southwestern Ontario in the past. They also are drought resistant, show less tendency to lodge and are not so susceptible to disease.

Hybrid corn is quickly replacing the old type of corn in Southwestern Ontario. Two years ago a Hybrid Corn Committee was appointed to look after the hybrid corn work in Ontario. Last year the Experimental Farm conducted a number of demonstration test plots with the co-operation of the Agricultural Representatives in the five counties in Southwestern Ontario. Last fall, from the data secured from demonstration plots and the other test plots, the Hybrid Corn Committee made and selected varieties to be recommended for Southwestern Ontario. The list was divided into three groups, Early, Medium and Late.

Comparative Yields—Fall Wheat Planted 7 Days Apart, 1938-39

<i>Date of Sowing</i>	<i>Yield per Acre</i>
September 3rd	38.25 bushels
September 10th	45.13 "
September 17th	46.72 "

Price of Corn, 90 cents per hundred pounds (ears).

Summary of Results in Spraying and Dusting Potatoes

Potatoes were planted in June, and during most of the time Dooleys were planted, but in 1938 Kahtadin were planted. Spraying and dusting started in July when plants were about 8" high. Applications were made from a week to two weeks apart, depending on weather conditions.

Power machinery were used for both spraying and dusting. Spray (Bordeaux mixture) was used at the rate of 80 to 100 gallons per acre and Dust (copper-lime) at the rate of 25 to 45 lbs. per acre. Five applications of each were given. In most cases the first two with a poison and the last three without a poison. Check plot was sprayed with poison only, to control insects—usually two sprayings.

<i>Year</i>	<i>Yield per Acre</i>		
	<i>Sprayed</i>	<i>Dusted</i>	<i>Check</i>
1931	176.9 bus.	206.6 bus.	129.2 bus.
1932	322.5 "	315.2 "	247.8 "
1933	180.0 "	213.5 "	146.5 "
1934	316.5 "	315.5 "	304.0 "
1935	166.5 "	162.0 "	149.2 "
1936	242.0 "	204.0 "	133.0 "
1937	261.0 "	243.0 "	166.0 "
1938	128.5 "	131.8 "	120.0 "
	1793.9 bus.	1791.6 bus.	1395.7 bus.
Average Yield per Acre—Sprayed,		224.2 bushels	
Dusted		223.9 "	
Check		174.4 "	

In 1938 only three applications of dusting and spraying were made. Due to rains and spreading of the potato tops, it was impossible to go through the plots to make a fourth application without doing a large amount of damage to the tops with the horses and machinery.

HORTICULTURE

Peaches, cherries and apples yielded heavy crops, both at the Farm and throughout the district.

Frequent showers, as sweet cherries matured, washed off protective sprays before they had an opportunity to dry and, consequently, there was considerable rot.

This year demonstrated that the recommended sprays for sour cherries will not in exceptional seasons prevent yellow leaf and consequent early defoliation. Possibly a basic copper solution might be more effective.

Considerable success in protecting cherries from starlings was obtained by the use of an automatic exploder using calcium carbide.

A spring greenhouse crop of Michigan State tomatoes yielded at the rate of 2.57 lbs. per square foot of ground space, a decidedly profitable crop.

POULTRY

Despite the increase in the number of commercial hatcheries, there has been a steady demand for hatching eggs from the surrounding community. The sale of cockerels from bred-to-lay Rocks is also well utilized by local poultry keepers.

Diagnosing of poultry diseases is an important and much used function of the Poultry Department.

SWINE EXPERIMENTAL WORK

During the past few years tests have been conducted in finishing bacon hogs on corn feeding. This varied considerably from year to year, particularly in regard to the grade of hog. With this in mind, an experiment was conducted to ascertain the amount of protein necessary in a ration when corn was used as an only grain feed. A number of hogs were selected around one hundred pounds in weight and divided into three groups. Group No. 1 got sufficient protein supplement to bring the ration up to 10% protein. Group No. 2 received enough protein to bring the ration up to 11% and Group No. 3 received enough to bring it up to 12%. The following is a summary of the results:

	<i>Per Cent Protein in Ration</i>	<i>Feed per lb. gain</i>	<i>Feed Cost per lb. gain</i>	<i>Grade</i>	<i>Profit per Pig over Feed Cost</i>
Pen No. 1	10	4 lbs.	4.5	75% B 25% C	\$5.07
Pen No. 2	11	3.8 lbs.	4.4	100% B	5.42
Pen No. 3	12	3.7 lbs.	4.4	100% A	6.37

At a little under one hundred pounds in weight, hogs were put on this experiment. They were well grown but lacked flesh. When live hogs sold at a little less than eight cents per pound, the price allowed per hog on the start was \$8.00 apiece and the average selling price on the market was \$11.50. The corn for this experiment cost one cent per pound, protein supplement two cents per pound.

SWINE EXPERIMENT—CROSS-BREEDING

The winter of 1939 we received a request from the Ontario Berkshire Club to do some cross-breeding between the Yorkshire and the Berkshire breeds. This work has been going on for over a year and is still in progress.

Two Berkshire sows were purchased and were bred to a Yorkshire boar. We also used a Berkshire boar on a number of our Yorkshire sows. There has been no noticeable difference in the way the pigs were crossed insofar as rate of gain, economy of gain and type of carcass were concerned. There was a distinct advantage, however, in the use of the Yorkshire sow when the cross was made as somewhat larger litters were obtained in this way.

	<i>Cross-bred</i>	<i>Yorkshires</i>
Rate of Growth	1.5 lbs.	1.3 lbs.
Feed per lb. Gain	3.4	3.4
Grade	10% A } 90% B }	70% A 30% B
Profit over Feed	4.30	5.10
Dressing Percentage	74	77

This table shows that the Cross-breds were ahead insofar as rate of growth was concerned but did not grade as well nor kill as high a dressing percentage and, consequently, did not give as much profit in the end as the pure-bred Yorkshire.

BABY BEEF EXPERIMENT

During the past few years considerable work has been done in regard to curing hay on tripods. This gives a better quality hay. This was tested out in baby beef production. Two lots of baby beefs were fed during the year.

Lot No. 1 were fed a mixed meal combined with oats, wheat, barley, corn and alfalfa hay. Lot No. 2 received ground soy beans, in addition to the mixed meal and alfalfa hay. Lot. No. 1 required 682 lbs. of meal and 332 lbs. of alfalfa to make 100 lbs. gain. Lot. No. 2 required 605 lbs. of meal and 60 lbs. of ground soy beans and 280 lbs. of alfalfa hay, consequently there was very little difference in the way these two lots did. If the hay had been a poor quality, there probably would have been a great deal more difference or, in other words, baby beef could be fattened successfully on mixed home-grown meal and well-cured alfalfa hay.

FARMERS' WEEK

The two-year course in Agriculture was discontinued this year due to lack of a residence for the students. Rather than hold a Short Course for just the young men of the district, it was decided to put on a Farmers' Week, to deal with the main problems in Southwestern Ontario Agriculture. This was held during one of the coldest weeks of the winter but the attendance was excellent; in fact, we had around six hundred different farmers attending.

PIG CLINICS

In order to meet the problem of swine diseases in Southwestern Ontario, it was decided to hold a two-day session on swine diseases. We advertised for farmers who were having trouble to bring their pigs in and we had Dr. Schofield and a couple of local veterinarians assist us in this work. We had an attendance of between two and three hundred farmers and about fifty pigs were brought in on this occasion.

STATISTICS AND PUBLICATIONS BRANCH

The work of the Statistics and Publications Branch embraces the preparation of agricultural statistics for the Province and the printing and distribution of publications dealing with farming subjects.

The compilation of statistics relating to all phases of agriculture was carried out with excellent co-operation from a large body of farm correspondents, cheese factories, creameries, commercial dairies, canning factories, and other establishments engaged in the processing and distribution of farm products. The statistical information is made available to the public, without charge, through the medium of the Monthly Crop Report, the Monthly Dairy Report, seasonal Fruit and Vegetable Crop Report, and the Annual Statistics Report.

The numbers specified of the following publications were printed for distribution to farmers during the current fiscal year:

<i>Annual Reports</i>		<i>No. of Copies</i>
The Report of the Minister of Agriculture.....		1,650
Agricultural and Experimental Union		2,500
Agricultural Societies		5,000
Entomological Society		1,500
Entomological Society, 1900-1937		1,500
Horticultural Societies		5,000
Ontario Agricultural College and Experimental Farm.....		2,000
Ontario Vegetable Growers' Association		1,500
Ontario Veterinary College		1,500
Stallion Enrolment Board		2,800
Statistics Branch		6,000
 <i>Bulletins</i>		 <i>No. of Copies</i>
<i>Serial No.</i>		
367 Pork on the Farm		15,000
392 Pruning the Tree Fruits		7,000
404 Tomatoes in Eastern Ontario		5,000
405 Painting on the Farm		10,000
406 Producing Hay of Higher Feeding Value		25,000
407 Soy Beans in Ontario		15,000
408 Home Canning of Fruits and Vegetables		25,000
409 Weeds of Ontario		20,000
410 Profits from Fertilizing Farm Crops		10,000
 <i>Circulars</i>		
58 Weed Eradication by Chemicals		10,000
Handbook on Feeding and Management of Dairy Cattle		30,000
Fertilizers Recommendations for 1940		15,000
Dairy Cattle Ration Cards		30,000

AGRICULTURAL AND HORTICULTURAL SOCIETIES BRANCH

During the year three new Societies were authorized—Chelmsford, St. Charles and Upsala, all in Northern Ontario. Sturgeon Falls and St. Joseph Island were reorganized, having been dormant for a number of years. The Glengarry and East Stormont Society was dissolved to operate as a Crop Improvement Association. New Liskeard was dissolved and Priceville was dormant. Three hundred and ten Societies were active.

Agricultural Societies had perhaps the most successful year in their history, with particular emphasis on service rendered to rural Ontario. In striking contrast to their operation a few years earlier, when activities were confined almost entirely to the conduct of Fairs, Societies in 1939 promoted a wide range of projects based on the needs of the respective communities served. The following will indicate the nature of these enterprises:

Field Crop Competitions.

Purchase and distribution of registered grain and certified seed potatoes at cost.

Spring Seed Fairs.

Society composite exhibits at large shows.

The operation or sponsoring of seed cleaning plants.

The maintenance of pure-bred sires.

The importation and distribution of breeding females.

Junior Clubs.

Rural Beautification Contests.

Reforestation.

Agricultural Meetings covering the following subjects: Weeds and Weed Control, Soil Fertility Problems and Soil Testing, Preparation of Grain and Seed with Special Reference to Cleaning, Grading and Treatment for Disease, Feeds and the Feeding of Cattle and Hogs, Co-operation and Marketing of Farm Products.

Short Courses.

T. B. Control (Restricted area meeting and sign-up).

Fall Fairs.

Spring Stock Shows.

Christmas Market Fairs.

This broader programme has received further encouragement by the "objects" of the new (1939) Agricultural Societies Act.

There was a remarkable increase in Field Crop Competitions from 134 the previous year to 193 in 1939. Owing to the organization of Crop Improvement Associations, which conduct Spring Fairs, grants in 1939 for this purpose were paid to 16 Societies only.

Under leadership of the Farmer's Magazine, 48 Rural Beautification Contests were held and 20 of these were sponsored by Agricultural Societies. Many organizations improved Fair Grounds by tidying, painting and planting trees and shrubs.

Livestock: Grants for maintenance of pure-bred sires were paid to 12 Societies as follows: Stallions 2, Bulls 69, Boars 28, Rams 15; total 114. Spring Stock Shows were held by 6 Societies.

Fall Fairs: It is doubtful if Societies ever staged more impressive shows than were held in the fall of 1939. Over 60 per cent indicated an increase in exhibitors and exhibits. Unfortunately, there was not a corresponding increase in gate receipts, as about 65 per cent of Societies reported a decrease as compared with the previous year. No doubt the declaration of war, just as fairs were opening, was a contributing factor. Though considerably above average, the weather was not as favourable as in 1938. Wet Weather grants were applied for by 52 Societies and only 76 per cent of gate receipt losses was covered. In contrast to the average, a number of Societies enjoyed a remarkable increase in gate receipts and the following Societies holding "one pay day fairs" are to be congratulated:

Teeswater	\$2,647.00
Bridgen	1,729.50
Rockton	1,729.00
Madoc	1,626.00
Erin	1,536.45

Many Societies made special efforts to create more interest in home communities by providing commercial and other classes to encourage the rank and file of local farmers.

Holstein or "Black and White" County Shows were held in conjunction with 15 Fall Fairs. In each case more county breeders exhibited and local interest was thereby extended. This plan brought out 144 head at Napanee, 126 at Markham and 115 at Roseneath.

By co-operation of the Ontario Cream Patrons' Association, educational exhibits of cream were sponsored by 18 Societies. These exhibits were staged in conjunction with competitive classes for which attractive prizes were offered. There were two divisions:

- (1) For 50 pounds of cream from any one dairy herd of 10 cows or more.
- (2) For 30 pounds of cream from a herd of less than 10 cows in milk at Fair time.

Orillia had 29 entries in this competition. Teeswater and Caledonia each had 14, while Markdale and Arthur had 11. Several other Societies modernized their prize lists in this respect and a few had cream grading competitions for juniors which were found to be quite educational.

Classes for pens of market hogs to be sold and slaughtered offer splendid opportunities for Societies to give practical encouragement and at the same time interest families which might otherwise not exhibit at Fairs. In 1939, Canada Packers Limited gave financial assistance to 12 Societies, and similar support was given by the T. Eaton Company Limited to 10 Societies. In each case, pens of 5 market hogs were required and these were sold for slaughter and prizes were awarded on a rail grade basis. The 5 Societies with highest entries are listed:

South Perth (St. Marys)	180
Moore (Brigden)	105
Caledonia	85
West Elgin (Wallacetown)	82
Teeswater	80

ONTARIO ASSOCIATION OF AGRICULTURAL SOCIETIES

The annual Convention of the Provincial Association was the largest ever held. Plans whereby Societies might make the greatest contribution to the war effort featured the programme. Association meetings were held in all districts. An important two-day Convention at Dryden was attended by delegates from all Societies west of the Great Lakes.

Service Diplomas were awarded by 102 Societies to carefully selected persons, one in each community, who had rendered unselfish service to agriculture and rural life.

During the year the Association became a member of the Ontario Chamber of Agriculture.

School for Judges: Young men and women from Central and Western Ontario, at their own expense, attended Schools at the Ontario Agricultural College for practice and instruction on Fall Fair judging, as follows:

1939	Classes	Number
April 20, 21	— Dairy Cattle and Swine	45
April 20, 21	— Beef Cattle and Sheep	43
April 20, 21	— Horses	47
April 20, 21	— Grain, Seeds and Roots	37
June 1, 2	— Poultry	21
August 8, 9	— Home Department	44

Lists of those attending Schools were sent to Societies and most of them received one or more judging appointments.

ONTARIO PLOWMEN'S ASSOCIATION

Interest in good plowing is still mounting, as evidenced by a marked increase in entries at the International Match and more activity throughout the Province. In 1939 Senior Matches were conducted by 83 Branches of the O.P.A., being 3 more than were conducted in the previous year and the largest number ever held. Three new Branches were organized:

Chelmsford	Sudbury District
Collingwood Township	Grey County
Manitoulin	Manitoulin Island

Junior activities were increased by the holding of 12 Junior Matches, 11 Home Plowing Competitions and 48 Demonstrations. Departmental instructions and judges were supplied for all of the Junior events and for all but 2 of the Senior Matches.

International Plowing Match, Brockville

As national leaders had urged that Agriculture should be geared to wartime efficiency, it was decided, shortly after war was declared, that the International should be held and, if possible, promoted with more enthusiasm and efficiency.

Their Excellencies the late Baron Tweedsmuir and the Lady Tweedsmuir visited the Match on Thursday. They enjoyed chatting with contestants, and Lord Tweedsmuir, not satisfied with talking about plowing, took the handles and plowed a furrow, to the delight of spectators.

In spite of inclement weather, the programme each day was completed and a new record for entries was established. The total of 681 entries in 4 days was 94 higher than last year, and 90 higher than the previous record established at Fergus in 1937. Local entries on Tuesday totalled 125, being higher than any previous year, excepting at Maryvale Farm in 1934, when competition was open.

The large increase in entries was due chiefly to a substantial extension of prizes offered. The application of a sliding scale in large classes encouraged new competitors, as in classes with over 15 entries there was an additional \$4 prize for each 3 entries. For instance, in Class 2, with 47 entries, 11 prizes were paid in addition to 10 advertised in the prize list. The total expended in awards was about \$2,200 higher than in 1938.

The "King's Plate" of the Match was the Trans-Atlantic Class, sponsored by the Salada Tea Company of Canada Limited. The winners were awarded medals and trips with all expenses paid to the British Isles:

Gold Medal—Edward Timbers, Milliken.
Silver Medal—R. G. Brown, Galt R.R. 7.

Junior Farmers were very much in evidence at Brockville. The new Inter-County (Tractor) Class brought out 11 teams of 2 plowmen each. The James McLean Memorial Trophy was won by the Dundas County Team with 129½ points. Coach—H. W. Graham. Team Members—Arnold Watson, Lunenburg, and Raymond Beehler, Cryslar.

The classic Inter-County (horse) contest provided the largest entry on record, with 22 teams and 66 young men under 20 years of age, plowing in one field. The Farmer's Magazine Trophy was won by the Haldimand County Team with 219½ points. Coach—A. Gordon Skinner. Team Members—Howard Fess, Selkirk; Rhys Bacher, Cayuga, R.R. 3; Harold Nie, Nanticoke, R.R. 1.

The exhibit of farm machinery and home conveniences was more impressive than in any previous year. There was a marked improvement in the effectiveness of displays.

Educational exhibits, always an important feature, were arranged by the following:

- Experimental Farm Systems, Ottawa.
- Ontario Veterinary College, Guelph.
- Ontario Agricultural College, Guelph.
- Agricultural School, Kemptville.
- Provincial Department of Health.
- Publicity and Extension Branch, Department of Agriculture, Ottawa.
- Forestry Branch, Ontario Department of Lands and Forests.
- Hydro-Electric Power Commission, Ontario.
- Crops Branch, Ontario Department of Agriculture.
- Ottawa Valley Seed Growers' Association.

Apart from some interference by unfavourable weather, educational demonstrations were very satisfactory and included the following:

- Multiple Hitch.
- Farm Drainage.
- Cultural — Draft of Implements.
- Oxen Plowing.
- Plow Setting.
- Anatomy and Care of Horses' Legs and Feet.
- Seed Cleaning.
- Weed Killing.
- Electrical Equipment — Farm and Home Conveniences.
- Soil Testing.

Horse Shoeing Competitions attracted large crowds daily. Class winners were as follows: Alex. Cleland, Barrie; L. Miller, Frankville; and C. Sheppard, Toronto.

Due to an increased prize list with 30 awards totalling \$500 and the energetic promotion of the Horse Committee, the average quality of plow teams was high and the Horse Show on Friday impressive. Awards were won by:

- 1—Clark Dairy, Ottawa
- 2—Stewart McConnell, Osgoode Station.
- 3—Charles Short, Lindsay.

Prizes amounting to about \$7,000 were provided by:

- The United Counties of Leeds and Grenville.
- The Town of Brockville.
- The Ontario Department of Agriculture.
- The Federal Department of Agriculture.

and other municipalities, corporations and public-spirited citizens.

Annual Convention:

Over 300 delegates and others interested in good plowing attended the successful Convention held in Toronto in February, 1939.

HORTICULTURAL SOCIETIES

The declaration of a state of war immediately raised the question of whether beautification might be left in abeyance or decreased for the duration of the war. Experience during the 1914-1918 period may serve as a guide:

<i>Year</i>	<i>Membership</i>	<i>Expenditure</i>	<i>No. of Societies</i>	<i>Government Appn. for Grants</i>
1913	11,422	\$32,701	71	\$12,000
1914	13,209	33,764	74	12,000
1915	14,465	48,021	79	12,000
1916	15,992	41,608	74	12,000
1917	17,162	47,035	82	12,000
1918	17,558	53,822	97	17,000
1919	24,877	68,974	93	17,000

These figures show there was an increase of 70 per cent in the number of Societies, the total membership was more than doubled, and the expenditure for horticultural purposes was multiplied by 3. This may be taken as evidence that in trying times people require a hobby which affords recreation and spiritual rest. We may therefore proceed on the assurance that Horticultural Society activities are fully warranted and a well-planned programme should be promoted with more enthusiasm than in times of peace.

During the year seven new Societies were authorized, as follows: Matheson; Selkirk; Port Dalhousie; Innerkip; Larder Lake; Omeme District; and Freelon. Ten were reorganized, including: Osgoode (Kenmore), Cochrane, Hagersville, Bronte, Norwich, Mitchell, Forest Hill and Markham. Five were dissolved or recorded as dormant. The total active Societies show an increase of 10, being 245, but satisfactory reports have not been received from all of these.

The main features of the 1939 programme are listed, with the response to each, as indicated by reports.

- 1—Civic Improvement—promoted in some form by 75 per cent of Societies
- 2—Rural Beautification—sponsored by 60 per cent of Societies
- 3—Juvenile Programme—sponsored by 60 per cent of Societies
- 4—Garden Competitions—sponsored by 50 per cent of Societies
- 5—Highway Tree Planting—sponsored by 35 per cent of Societies.

The Royal Visit offered additional opportunities for service. Many Societies planted trees in commemoration and others were responsible for impressive civic decorations.

Rural Beautification: Satisfactory progress has been made in the programme to beautify rural Ontario under the direction of the Departmental Committee. In four counties where concentrated campaigns were organized, remarkable improvement has been achieved. In Carleton during the year 40 meetings were held and 205 contestants entered competitions for which a total of \$500 was offered in prizes. An average of 100 forest trees each was distributed by 48 schools. Sixty lawn mowers were distributed throughout the county.

In Haldimand, the 10 Point Plan outlined at the last Convention was carried through successfully. Thirteen schools were landscaped and trees were distributed to all pupils in the county. Some 114 trees were planted to commemorate the visit of Their Majesties. Some 765 shrubs were planted on school properties and the majority of these were in good condition. Approximately 205,000 trees were planted throughout the county. Similar work, though not quite as extensive, was done in the Counties of Lambton and Northumberland. Rural beautification, however, was not confined to a few counties but has been general throughout the Province.

To co-ordinate the efforts of officials concerned and to promote more general improvement of Rural Schools an inter-department committee was convened in December 1939, composed of representatives from the Departments of Education, Forestry and Agriculture. During the winter plans were developed which resulted in a marked increase of activity in this important phase of rural beautification.

ONTARIO HORTICULTURAL ASSOCIATION

The Annual Convention of the Provincial body was well attended and enthusiastic. The general programme of the Association reached practically all parts of Ontario.

Meetings for officers were held in 11 Association Districts. Summer meetings or field days for members were held in all districts in Old Ontario with one exception.

The Association gave financial assistance to 38 Societies for the expense of speakers. During the year a new record book was designed and a quantity purchased for resale to Societies at cost as required.

As a service, the Association is now in a position to lend slides to Societies as three sets have been purchased for that purpose.

Junior Flower Judging Competitions were conducted in five Association Districts. Teams representing the following Societies were first prize winners:

<i>District</i>	<i>Place of Competition</i>	<i>Society</i>
2	Arnprior	Arnprior
4	Woodville	Lindsay
6	Hamilton	Hamilton
7	Guelph	Guelph City
10	Tavistock	Woodstock

The first Junior Championship Judging Competition was held at the 1940 Convention, open to a prize winning team from each of the above Districts. The Black Leaf 40 Trophy was won by the District No. 10 Team sponsored by the Woodstock Society. Coach—Fred Fairs, District Director. Woodstock. Team—John Dewan, Allan Harley and Jack Fletcher.

Rural School Improvement Competitions were conducted in seven Association Districts. The winner in each case was entered in a Championship Contest. The J. E. Carter Trophy for highest score in the Provincial Competition was awarded to S.S. 4, Crahame, Northumberland County, District 4. Teacher—Miss C. Hubble.

Association Awards in 1939:

Silver Medal and Diploma—Rev. H. A. E. Clarke, Cornwall.
Diploma—Fonthill Society.
J. E. Carter Gold Medal—H. Occomore, Guelph.
Service Diplomas were provided to 60 Societies.

AGRICULTURAL REPRESENTATIVE BRANCH FOREWORD

The duties of the Agricultural Representative are many and varied. His programme, like that of the farmers whom he serves, had to be adjusted to meet changing conditions caused by the outbreak of the second world war. Although the agricultural products most needed by the Allies have not yet been clearly defined, except in the case of bacon, the Agricultural Representatives have adopted a policy embodying three fundamentally sound principles of agriculture:

1. Increase the yield per acre by the use of clean, plump seed of suitable varieties, the practice of adequate tillage methods and the maintenance of soil fertility.
2. Improvement in quality of live stock and field crops.
3. Maintenance of the regular system of farming with more emphasis on economic production, rather than the extensive mass production of any one crop or breed of live stock.

In cases of economic stress or national emergency calling for careful study of all agricultural problems, the work of the Agricultural Representative is multiplied.

During the year A. V. Langton, Agricultural Representative in Glengarry and East Stormont, resigned to take up farming, and J. A. Dalrymple of Smithville, who has been acting as Assistant Agricultural Representative in Prince Edward County, was appointed to the position of Agricultural Representative in Glengarry and East Stormont.

LIVE STOCK IMPROVEMENT

Horses

The Agricultural Representatives provided transportation for Stallion Inspectors when they made their annual fall inspection.

Bot Fly Control was encouraged. Special programmes, including treatment for Encephalomyelitis (sleeping sickness) were organized in localities where outbreaks of this highly fatal disease were feared. Excellent results were obtained with chick vaccine.

Several field days and horse shows were arranged. The Stratford Horse Show, operated by the Perth County Horse Breeders' Association, has the local Agricultural Representative as Secretary-Treasurer.

Cattle

T.B. Restricted Areas: All preliminary organization for circulating petitions and completing the canvass for the establishment of the county or district as a T.B. Restricted Area is assumed by the Agricultural Representative. (See Live Stock Branch for report on progress of testing.)

Warble Fly Control: In Oxford County warble powder was provided by the County Council annually from 1934 to 1938 and all cattle were treated. No powder was provided for 1939 but distribution was made again in 1940. The total cost in 1934 amounted to \$1,984.00. This was gradually reduced in five years to \$252.44 in 1938, but jumped again after the lapse of one year to \$800.80. This report, as well as results obtained in special work on Barrie Island, gives definite proof of the value of annual treatment for warbles.

OXFORD COUNTY

<i>Year</i>	<i>Powder Purchased</i>	<i>Cost</i>
1934	3,100 lbs.	\$1,984.00
1935	875 "	545.55
1936	965 "	627.25
1937	850 "	340.10
1938	584 "	252.44
1939	No powder purchased by County Council	
1940	352 lbs.	800.80

NOTE: 5½ ozs. of powder purchased in 1940 is equal in strength to 1 lb. purchased in 1938.

Bull Loaning Policy

The Agricultural Representatives co-operated with the Dominion Production Service in organizing Bull Clubs in Northern Districts. The service of these good bulls has done much toward the improvement of cattle in districts where farmers have difficulty in financing the purchase of a good bull. Report of bull clubs now in operation:

<i>District</i>	<i>No. of Clubs</i>	<i>Breed of Bull</i>	<i>No. of Members</i>
Algoma	23	19 Shorthorn, 3 Angus, 1 Ayrshire	154
Cochrane W.	2	Ayrshire	30
Kenora	6	4 Milking Shorthorn, 2 Holstein	61
Lanark	3	Shorthorn	30
Manitoulin	12	9 Shorthorn, 3 Hereford	66
Muskoka & P. S.	20	Shorthorn	
Nipissing	8	6 Shorthorn, 2 Ayrshire	
Rainy River	17	Milking Shorthorn	150
Renfrew	6	Shorthorn	45
Sudbury	4	1 Ayrshire, 3 Milking Shorthorn	29
Temiskaming	5	Shorthorn	55
Thunder Bay	18	15 Shorthorn, 3 Holstein	161
Totals	124	95 of 124 clubs reporting membership	681

Cow Testing

Dairymen continue to show little interest in cow testing. Those with sufficient pure-breds, of course, enter R.O.P. In Halton County 266 cows were on test and the following comparisons show the value of testing:

	<i>Average Lbs. Milk per Cow</i>	<i>Average Lbs. Fat per Cow</i>	<i>Total Value per Cow</i>	<i>Difference per Cow</i>
High Herd	11,173	390.2	\$237.98	\$ 68.90
Low Herd	7,938	276.2	169.08	
High Cow	13,834	497.0	298.81	218.85
Low Cow	3,136	156.3	79.96	

Sheep

Some 16 drenching demonstrations were held, at which 1,056 sheep were treated for internal parasites. It is estimated that more than 42,000 sheep were treated in 1939, while 2,020 sheep were dipped in demonstrations. It is estimated 120,000 sheep were dipped or otherwise treated for ticks and other external parasites.

The Representatives also assisted materially in the organization of Lamb Fairs and the co-operative marketing of wool and lambs.

Swine

Advanced Registry Swine Breeding was organized in Waterloo County about six years ago and by the organization work of the Agricultural Representatives, Advanced Registry Swine Clubs, Boys' Swine Clubs, Boar Clubs and by private purchase, Advanced Registry stock has spread to nearly every county in Ontario.

With indications of a greatly increased swine population, the signing of the British Bacon Agreement and the hope of encouraging the production of winter litters and to reduce the mortality in winter farrowed pigs, the Agricultural Representatives organized and held 171 special swine meetings, with a total attendance of 7,605.

Quarterly Pig Survey

The Agricultural Representatives co-operate very closely with the Dominion Marketing Service in estimating the pig marketings over three months' periods. A special attempt was made to encourage more boar owners to fill out quarterly reports and thus increase the efficiency of the survey.

South Simcoe made a complete boar census, resulting in a greatly increased number of boar owners co-operating in the survey.

Rail Grading

In order that farmers might get a clearer picture of the set-up necessary for grading hogs on the rail and to see first hand the actual grading process, groups of farmers were invited by one of the large packing plants in Toronto to spend a day at the plant. Groups visited the plant as follows:

<i>County</i>	<i>No. of Groups Visiting Packing Plant</i>	<i>Total Attendance</i>
Brant	1	98
Bruce	2	75
Halton	4	221
Ontario	1	59
Peel	2	91
Perth	1	46
York	9	514
	20	1,104

In addition to the above, similar groups visited packing plants at Hamilton, Stratford, Kitchener and Barrie.

POULTRY

Poultry Culling

Some 103 Poultry Culling Demonstrations were held in 21 counties, with 12,000 birds culled in demonstration. It is estimated 371,000 birds were culled in Ontario in 1939. There are 601 Ontario Breeding Station flocks in Ontario.

Through culling and worming demonstrations, post-mortem examination of diseased birds, along with recommendations for proper feeding, sanitation, care and management and the selection of good breeding stock, mortality in poultry is being gradually reduced and vigor and production increased.

Agricultural Representatives are closely connected with the Poultry Industry from the Breeding Station flock, producing high class hatching eggs, to the marketing of poultry and eggs.

LIVE STOCK BREEDERS' CLUBS

The Agricultural Representatives, in most cases, act as Secretaries of the County or District Live Stock Breeders' Clubs. Number of Clubs by breeds:

<i>Club</i>	<i>Number</i>	<i>Membership</i>
Holstein Clubs	36	1,403 (25 reporting membership)
Ayrshire Clubs	11	140 (5 " ")
Jersey Clubs	12	238 (7 " ")
Shorthorn Clubs	10	178 (6 " ")
Yorkshire Clubs	8	175 (8 " ")
Guernsey Clubs	3	54 (1 " ")
Clydesdale Clubs	2	
Horse Breeders Clubs	2	
Swine Producers Clubs	2	
Turkey Clubs	1	

FIELD CROP AND SOIL WORK

In January, February and March, 1940, as a war measure, a special Field Crop Programme was inaugurated, with the object of encouraging farmers to use quality seed, of which there was an abundance, to practise adequate tillage and to maintain the fertility of the soils at a satisfactory level. With a labour shortage which has indications of becoming more acute, it was felt that material increase in crop production could be brought about in this manner, without bringing into production much additional land of doubtful producing ability.

Crop meetings were held in every county; some counties prepared and forwarded special crop letters to every farmer.

A comprehensive seed survey was made and lists of available seed supplies of good quality were compiled in a 76-page mimeographed book, which was given wide distribution.

As a result of the survey and the Field Crop Programme, more high quality seed of suitable varieties was used than ever before.

HAY AND PASTURE PROGRAMME

Hay and pasture crops in Ontario constitute 52% of the total crop acreage. These crops are often referred to as the lowest cost feed crops and the most neglected crops in Ontario Agriculture.

On January 24, 1940, the Ontario Hay and Pasture Committee was organized, representing the Ontario Department of Agriculture, the Ontario Agricultural College, the Kemptville Agricultural School, the Ridgeway Experimental Farm and the Dominion Production Service. A long-time programme of Hay and Pasture Improvement was planned.

Immediate recommendation was made for the printing and distribution of 30,000 copies each of Bulletin No. 406 and Extension Circular No. 28, 10,000 copies of a circular on Tripod Curing of Early Cut Hay and 20,000 copies of a circular on Pasture for Poultry. Some 5,000 posters were prepared and distributed. A summary of work accomplished to date on hay and pasture improvement was assembled and copies submitted to Agricultural Representatives for reference purposes.

The reorganization of all crop improvement work under the County Crop Improvement Associations, commenced in 1938, was continued in 1939.

Crop Improvement Statistics:

Number of County Crop Improvement Associations	39
“ County Seed Fairs	23
“ Total Entries	2,952
“ Total Crop Meetings and Demonstrations	146
“ Attendance	7,175
“ Variety Test Plots	162
“ Variety and Fertility Test Plots	26
“ Fertility Test Plots	231
“ Rod Row Replicated Test Plots	58
“ Junior Farmer Fertility Test Plots	88
“ Hay and Pasture Improvement Demonstration Test Plots	49
“ Mustard Control Plots	8
“ Disease Control Plots	11

Soil Improvement

Farmers are turning more and more to the soil test as the basis for soil management. Twenty-one Representatives' offices are equipped with soil test kits. The Counties of Peel and York have granted financial assistance to this work so that tests can be made of soils on practically all the farms.

LEAF AND STEM RUST OF GRAIN

Oxford County reports that an Oat Variety test plot was damaged by stem rust and a barberry bush was discovered growing within 125 feet of the plot. Incidentally, Vanguard and 22-00-6 came through almost 100% clean. Within 1½ miles of this plot a serious leaf rust infestation was traced to an old buckthorn hedge. In this case Erban oats stood up and were easily cut, while Alaska and Gopher varieties close by were flat on the ground and of little value.

These experiences have resulted in a vigorous campaign to clean out all existing buckthorn and common barberry shrubs. Several demonstration meetings have been held. The corn borer inspector has been empowered to have these shrubs destroyed and all teachers in rural schools will teach at least one lesson on leaf and stem rust control.

Fanning Mill Screen Service

In counties where it is difficult to purchase adequate screening material, the Agricultural Representatives provide this service at cost. In South Simcoe 65 fanning mills were equipped with new screens at a series of 6 crop meetings. In York County more than 30 screen sizes and types are carried and hundreds of requests are received annually for this material.

Orchard Spray Service

Some 4,941 fruit growers in 27 counties received the series of spray service letters. All of these growers received at least 8 letters and some received as many as 15 during the spraying season.

CONSERVATION AND REFORESTATION

The Agricultural Representatives co-operate very closely with county and district reforestation committees. In fact, three of the five Zone Secretaries are Agricultural Representatives.

The reforestation and conservation programme in Ontario continues to make substantial progress. A new County Forest was established in the Counties of Leeds and Grenville, with the purchase of 1,100 acres of land.

Zone meetings and field days were held in all five zones. The number of forest trees distributed has increased from 16 million in 1938 to 17 million in 1939.

Many counties are expanding their county forests, introducing school, junior farmer and Boy Scout plantations. Towns and villages are practising conservation by planting areas around their sources of water supply.

HOME BEAUTIFICATION

More attention is being devoted to the appearance of the farm home and much has been done in the way of planting, leveling, repairing, painting and cleaning up.

Some 47 Home Beautification Contests were conducted with a total membership of 993.

In Bruce County the Bruce Beautification Bureau was organized with a membership of well over 1,000. The programme includes 18 school planting demonstrations, a large number of meetings, a combined reforestation and beautification field day and tour, a clean-up week, etc. Members receive a reduction of 35% on certain nursery stock and 20% on certain paints.

In Northumberland County 10 woodlot meetings were held, largely with school children, with an attendance of 1,143. S. S. No. 4 Cramahe, in Northumberland, won the Carter Trophy for the school showing the greatest improvement in school ground appearance in Ontario.

In Haldimand County the Home Improvement Association was formed in February, 1939. Achievements are: Membership, 808; affiliated organizations, 35; clean-up campaigns, 6; trees planted to commemorate the Royal Visit, 114; press articles, 10; schools undertaking school planting, 11; meetings, 35; attendance, 3,079; other achievements included extensive tree planting, home grounds improvement, house painting, cemetery improvement, etc.

In Carleton County the Rural Home Beautification Association has a membership of 1,100. 23 meetings were held, with an attendance of 1,892. 248 farm homes were given landscape service. There were 5 Home Beautification Contests, with a membership of 205. The financial statement shows receipts to the extent of \$549.75, all of which was expended on the work.

FARM TOURS

Farm tours are becoming more and more popular. Invariably these trips are planned, organized and managed by the Agricultural Representative.

PLOWING MATCHES

Some 72 County Plowing Matches were held in 1939, with competitors totalling 2,628 and a total prize list amounting to \$19,627.10.

SEPTIC TANKS

Some 127 septic tanks were built with the use of the forms located at the offices of the Agricultural Representatives. There is now a total of 1,133 septic tanks in Ontario built in this manner.

FARM LABOUR

The Agricultural Representatives received 1,690 applications for farm help and the following were placed:

Single Men	1,060
Married Men	66
Boys	46
	<hr/>
	1,172

Some of these placements were made with the co-operation of Employment Bureaus.

JUNIOR EXTENSION

Rural School Fairs

106,919 pupils made 203,667 entries in 509 School Fairs held in 1939. The total attendance amounted to 128,140 children and 133,791 adults. 294,260 packages of grain, vegetable and flower seeds were distributed to school pupils in the spring.

Rural School Fairs are a joint project carried on by the Departments of Agriculture and Education. While the general supervision and management is vested in the Agricultural Representatives, the Public and Separate School Inspectors share equal responsibility in drafting prize lists, judging exhibits and competitions dealing primarily with school work, the day of the fair. The Agricultural Representative, in addition to sharing the responsibility of organization and management, assumes the full responsibility for the packaging and distribution of seeds, prize lists and entry tags, securing of judges, transportation of tables, poultry coops and other equipment and all clerical work in connection with each fair.

Short Courses in Agriculture

Courses in Agriculture of from one week to two months duration were conducted for young men who cannot be spared from duties at home to attend a longer course at an agricultural school or college. The courses are organized on the request of the local people who supply the accommodation. The Department of Agriculture supplies the instructors and equipment. The Agricultural Representative is in charge of the course in each case.

Due to the outbreak of war and the necessity for conservation of public funds, the usual practice of holding a number of three-month schools was suspended this year.

Courses Held During the Year

	<i>Number</i>	<i>Enrolment</i>
Two-Month Courses	2	64
One-Month Courses	41	1,286
Two-Week Courses	5	121
One-Week Courses	3	49
Four-day Courses	3	375
Three-Day Courses	8	329
Two-Day Courses	2	170
One-Day Courses	4	187
Special Two-Day Course in Farm Management	6	234
Correspondence Course	1	100
Total	75	2,915

A large number of special courses of from one to four days duration were held, comprising a wide variety of agricultural subjects. The study of specific subjects through the medium of study groups is proving popular in a number of counties and districts.

JUNIOR FARMER ASSOCIATIONS

Junior Farmer Associations are a natural outgrowth of short courses and are organized to maintain short course associations and to provide an opportunity for further study and community work. Junior Farmer Associations render distinguished service to the Agricultural Representative in the organization and conducting of many junior activities in the respective counties. There are in Ontario 130 Junior Farmer Branch Associations and 17 County Associations. One hundred and nineteen of these Associations report a membership of 3,220.

"JUNIOR FARMER NEWS," a mimeographed monthly publication edited by the Agricultural Representative Branch, is forwarded to the association secretaries and is designed to provide information and ideas for regular meetings and to serve in bringing about a clearer and more personal relationship between the various associations throughout the Province.

JUNIOR FARMER PLOWING COMPETITIONS

Thirteen Home Plowing Competitions and 8 Junior Plowing Matches were held, with 304 Junior Farmers competing. Junior Plowing Competitions usually preceded by plowing demonstrations, given by an expert plowman, provide an excellent elimination contest for the selection of teams to represent the county at the International Plowing Match.

Judging Competitions

Realizing the practical educational value of being proficient in judging live stock and seeds, young men and boys entered the various county and district events in greatly increased numbers. Forty-four County Live Stock and eight Seed Judging Competitions were conducted by Agricultural Representatives, with a total of 2,313 Junior Farmers taking part. These figures do not include judging competitions at fairs, seed fairs and field days.

Total Entries in Judging Competitions at Class A Fairs

Central Canada Exhibition	263
Peterborough Industrial Exhibition	235
Canadian National Exhibition	422
Western Fair, London	223
Total	1,143

At the 13 Class B Fairs special Junior Farmer programmes were arranged in stock and seed judging, rope and halter work, team demonstrations and inter-club calf and colt competitions.

In lieu of the Winter Fairs, which were suspended, the Ontario Provincial Winter Fair Association staged an excellent Seed Fair in the King Edward Hotel, a prominent feature of which was the junior section. Each Grain and Potato Club in Ontario was eligible to make three entries.

Number of Entries in Junior Section

Potatoes	45
Corn	23
Oats	53
Barley	16
Total	137

Inter-County Competitions were held at the following fairs:

	<i>Team Competing</i>	<i>No. of Contestants</i>	<i>Winning Team</i>
Ottawa Valley Seed Fair			
March, 1939	6	18	Carleton
April, 1940	5	15	Renfrew
Quinte District Seed Fair	8	67	Durham

MASSEY FUND SCHOLARSHIP

A number of counties, in conjunction with the Massey Fund, provide scholarships to send worthy boys to the Ontario Agricultural College at Guelph. The Agricultural Representative is invariably one of the selecting committee and the award is made on the applicant's ability as evidenced by Junior Farmer, agricultural and community work. If the qualifications of two or more applicants are very nearly equal, then a written examination is given.

Counties participating in 1939 were Bruce, Carleton, Dundas, Glengarry, Haldimand, Kent, Norfolk, Perth, North Simcoe, South Simcoe, Stormont and York.

The County of Leeds, through three public-spirited citizens, provides scholarships of \$100 each to four students from the county attending the Kemptville Agricultural School.

4-H CLUB CONGRESS, CHICAGO

Five young women and seven young men, selected for some outstanding accomplishment in their respective counties, attended as a group the National 4-H Club Congress held in conjunction with the International Live Stock Show at Chicago. C. D. Graham, Agricultural Representative for Peel County, had charge of the party and Miss Lulu Row, of the Institutes Branch, acted as chaperone for the girls.

CLUB CAMPS

The report on junior work would not be complete if mention was not made of the club camps organized by the Lakehead Exhibition and the Central Canada Exhibition.

In co-operation with the Port Arthur-Fort William Kiwanis Club, the Lakehead Exhibition held a three-day Junior Farmer Camp. A building was provided for the showing of exhibits. The following special projects were sponsored: 1 Calf Club, 1 Grain Club, 2 Sheep Clubs, 3 Potato Clubs and 1 Home Garden Club.

At Ottawa, the Central Canada Exhibition Association organized a Boys' Calf Club Camp. One hundred and seventy-eight boys were housed in tents for five days. An equal number of calves were provided with accommodation in six large tents nearby. In addition to calf and showmanship classes, judging competition and parade of calves, the camp members were provided with meals and a full five-day programme, including trips to points of interest in Ottawa and a seat on the grandstand for one of the evening performances.

BOYS' CLUB WORK

Club work with boys between the ages of 12 and 20 continues to hold its popularity and is making excellent progress. The Agricultural Representative assumes responsibility for the organization of boys' clubs, assisted by a volunteer club leader and a committee of three (one of whom is the Agricultural Representative). Each club is sponsored by a local organization which, in addition to taking personal and direct interest in the club members, agrees to pay one-third of the prize money and often arranges suitable credit on which club members can purchase a good calf, pair of pigs, group of sheep or a flock of baby chicks.

In the live stock clubs, particularly those of calf, colt and swine, the membership has increased from year to year. In many cases the Ontario Live Stock Branch Officers contribute their services to the work, particularly on Achievement Days. The Live Stock Branch also contributed \$712.50 in grants to 52 colt clubs and \$1,640.32 to 88 calf clubs.

In 1939, 5,085 boys and girls were enrolled in 316 clubs—an increase of 759 club members and 45 clubs over the previous year.

Clubs Organized in 1939

	<i>No. of Clubs</i>	<i>Membership</i>
Calf Clubs	88	1,386
Swine Clubs	14	201
Foal Clubs	52	769
Sheep Clubs	4	81
Poultry Clubs	10	193
Grain Clubs	66	1,121
Potato Clubs	42	742
Garden and Canning Clubs	40	592

Provincial Club Contests

The two high boys between the ages of 16 and 20 in each club were eligible to compete in the Provincial Boys' Club Competitions held at the Ontario Agricultural College, Guelph, on October 20. Trophies and cash prizes are provided in each project, the Ontario Live Stock Branch contributing \$45 in prize money to the foal club competition and \$88 to calf club winners.

Winning Teams:

<i>Project</i>	<i>No. of Teams Competing</i>	<i>Winning Team and Coach</i>	<i>Team Members</i>
Dairy Calf	33	Leeds County—J. R. Ostler	{ Ross Stone, Forfar { Jos. K. Raison, Harlem { Donald Stuart, Muncey

Poultry	5	Lincoln County—E. F. Neff	

LIVE STOCK BRANCH

HORSES

It is generally conceded that the number of stallions enrolled in any year is a very good criterion of the amount of breeding being done. In 1939 there were 1,701 stallions standing for public service, the greatest number in any year since 1919, when 1,729 were enrolled. This number gradually and steadily decreased each year until 1932 when 1,013 horses were enrolled. In 1933 there was an increase and this condition has continued up to the present time, reaching the high figure of 1,701 in 1939. It would appear that horse breeding in Ontario is now on the same basis as in 1919.

General conditions in agriculture and industry have had a decided influence on the trend of horse production. The period covered by the early 1920's witnessed the introduction of mechanical power on the farm. It also marked a period when the price of farm products was highly satisfactory, so much so that many farmers began to show a preference for tractors. Automotive power began replacing horses in industrial centres. These two conditions resulted in a reduced demand for horses. When the depression came in the late 1920's and early 1930's farmers again began thinking in terms of horses. They realized that they could produce the fuel required for horse power, which was not the case with the tractor. During the first years of the depression horses that were becoming old should have been discarded but were forced to carry on. It was inevitable that sooner or later replacements would be necessary. After the low point in the cycle was reached in 1932 the trend began to show an upward turn. The increase has continued to the present time. During the last few years horses have found a ready sale at good prices, but a slight dropping off in demand was noted in 1939. As a result of increased breedings in previous years it would appear that the supply has again caught up with the demand.

At the outbreak of war many farmers began thinking of increased production. Implement manufacturers were quick to sense this situation. Most fairs following the outbreak of war were featured by large displays of farm machinery, which resulted in many sales. Undoubtedly many purchases were made in anticipation of higher prices for farm products. The advance in farm commodity prices to date has not been up to expectations and this condition has caused a temporary lull in implement buying. Nevertheless, if the prices of farm products advance, tractors may again replace horses on many farms. In view of this possibility, coupled with the fact that the war has not as yet created any new demand for horses, it would appear that Ontario has reached another stage in the cycle—a stage when horse breeding may be on the decline.

STALLION ENROLMENT

The Ontario Department of Agriculture has been endeavouring to improve the horses of the Province by regulating the kind of stallions that can be used for public service. There were 174 Form 1 horses and 215 Form 2 horses enrolled in 1939. All amounts paid by the Province are duplicated by the Federal Department of Agriculture. The Ontario Department, through its Live Stock Branch, paid out \$12,050 for premiums in 1939 to the owners of 263 stallions.

Following is an analysis of the stallions qualifying for premiums according to breeds: Percherons, 104; Clydesdales, 98; Belgians, 31; Thoroughbreds, 10; Standard Breds, 7; Hackneys, 6; German Coach, 4; French Coach, 2; French-Canadian, 1.

HORSE SHOWS

The Ontario Live Stock Branch continued to grant assistance to spring horse shows during the year. The following fairs received assistance in 1939:

Perth County	\$ 500.00
St. Catharines	500.00
Toronto Open Air	200.00
Clinton	200.00
Brantford	200.00
Linwood	200.00
North Blenheim	182.00
Brooklin	164.50
Elora	126.00
St. Clements	98.00
	\$2,370.50

CATTLE

It is estimated that Canada produces an annual surplus of almost a quarter of a million cattle. The best market for the surplus cattle is in the United States because of the proximity of the important markets of that country to the areas of production in this Dominion. A duty of three cents a pound was imposed on Canadian cattle entering the States in 1930, and on January 1st, 1939, a new Canadian-American agreement became effective and under the terms of that agreement the duty was reduced to one and one-half cents a pound. Canada is permitted to supply 51,720 cattle during each quarter of the year and exports amounted to 191,101 head. Of this number Ontario furnished 64,837 head of beef cattle and 6,537 head of dairy cattle.

The United States has continued to be our best outlet for dairy cattle. Prices were slightly lower in 1939 than during the two previous years but trade was good with prices at satisfactory levels.

RESTRICTED AREAS

Testing of cattle for tuberculosis is becoming a more important factor in sales each year. For quite a number of years all breeding stock entering the United States must have passed satisfactory tuberculin tests. In 1938 this regulation was extended to include all cattle except those for immediate slaughter.

Many new areas were undertaken in Ontario during the year. These included the following counties: Waterloo, Brant, Norfolk, Wentworth, Simcoe, Grey, Essex and Lanark. The Ontario Department of Agriculture has been responsible for all educational work leading up to the actual testing. As a result, in Old Ontario the cattle owners in most counties have signed the necessary petitions and are awaiting the test. The only exceptions at the end of the fiscal year are the Counties of Kent, Frontenac, Renfrew and Welland. The work is rapidly nearing completion in these counties and it is expected that the sign-up will be completed in the coming year. Following is a summary of the results of restricted area testing in the Province to date:

<i>Counties in which Testing was carried on during Fiscal Year 1939-40</i>		<i>No. of Cattle Tested up to March 27, 1940</i>	<i>No. of Reactors</i>	<i>Per Cent Reactors</i>
Brant	1st general	13,254	2,084	15.5%
Dundas	1st general	6,864	172	2.5%
Durham	1st general	40,823	2,885	7.0%
Essex	1st general	8,175	724	8.8%
Frontenac	3rd general	11,328	48	.4%
Glenarry	3rd general	38,518	140	.3%
Grenville	3rd general	24,363	218	.9%
Grey	1st general	34,220	1,329	3.9%
Halton	2nd general	19,720	122	.6%
Kenora	3rd general	3,805	7	.2%
Lanark	1st general	21,560	534	2.5%
Leeds	3rd general	50,896	183	.3%
Northumberland	2nd general	35,183	125	.3%
Norfolk	1st general	1,909	253	13.2%
Ontario	2nd general	53,851	450	.8%
Peel	2nd general	22,135	229	1.0%
Peterboro	1st general	39,891	1,346	3.4%
Prescott	3rd general	40,915	152	.38%
Rainy River	1st general	8,872	83	.9%
Simcoe	1st general	47,990	1,901	3.9%
St. Joseph's Island	1st general	1,530	19	1.2%
Thunder Bay	2nd general	3,486	30	.86%
Victoria	1st general	58,471	1,578	2.7%
Waterloo	1st general	46,504	4,333	9.3%
Wentworth	1st general	19,635	1,247	6.3%
York	2nd general	54,215	688	1.3%

The Ontario Department of Agriculture pays the transportation expenses of veterinarians engaged in testing cattle under this plan.

AUCTION SALES OF PURE-BRED LIVE STOCK

Grants to assist in the financing of auction sales sponsored by breeders' clubs for the purpose of distributing high-class breeding stock were again available in 1939. Where all cattle entered in such sale are free

from tuberculosis and contagious abortion, the grant amounts to \$4 a head up to a maximum of \$150 for any one sale. When the cattle have not been tested for tuberculosis but are free from contagious abortion the grant is on the basis of \$3 per head up to a maximum of \$100. In some instances shows are held in connection with sales, and in such cases an additional grant of \$25 is available to supplement the prize list. Following is a report covering sales receiving assistance in 1939:

<i>Organization</i>	<i>No. of Head Sold</i>	<i>Grant Paid</i>
Victoria County Shorthorn Club	13	\$ 52
Durham County Shorthorn Club	28	112
Brant County Holstein Club	48	150
Western Ontario Consignment Sale Co., Simcoe	36	144
Grey County Holstein Club	25	100
*North Grey Shorthorn Club	32	153
National Holstein Association	55	150
Ontario Aberdeen Angus Club	26	104
		\$965

* Show held in connection with sale.

CATTLE SHOWS

Grants to special cattle shows are on the basis of 20% of the prize money paid, up to a maximum of \$100 for any show.

Following is a report of shows receiving assistance in 1939:

<i>Place</i>	<i>Description</i>	<i>Amount</i>
Wallacetown	Beef	\$ 100.00
Brant County	Dairy	100.00
Glengarry and East Stormont	Dairy	67.40
Middlesex County	Beef	64.40
Middlesex County	Dairy	100.00
Wentworth County	Dairy	100.00
Hastings County	Black and White	70.00
Halton County	Black and White	48.20
Carleton County	Black and White	68.60
Stormont County	Black and White	11.20
Dundas County	Black and White	30.40
York County	Black and White	100.00
Lanark County	Black and White	62.40
Leeds County	Black and White	62.40
Durham County	Black and White	56.80
Port Perry	Black and White	62.40
Spencerville	Black and White	60.40
Lennox County	Black and White	75.20
Pictou	Black and White	44.00
Roseneath	Black and White	78.00
Lakefield	Black and White	62.40
		\$1,454.20

SWINE

There have been two major developments affecting the swine industry of Canada in the past eight years. The first one took place in 1932 at the time of the Imperial Conference, when Canada and Great Britain entered into a trade agreement with respect to the export of bacon. Since the

war began the British Government agreed and guaranteed to purchase 5,600,000 lbs. weekly from Canada. Great Britain has further intimated that she will purchase as much more as possible, but has given no definite guarantee covering amounts in advance of those stated above.

Early in August, Ontario packers announced that on and after August 24th they would purchase hogs on the basis of rail grade and rail weight only. This announcement was received by producers with mingled feelings of praise and protest; nevertheless, the practise has continued and is gradually becoming more popular. Producers are beginning to realize as never before the importance of marketing hogs at the proper weight. Ontario still produces more hogs than any Province in the Dominion. In 1939 Ontario marketings were 1,667,991 head, and at inspected Packing Plants marketings amounted to 1,384,996 hogs. The total inspected marketings for the Dominion were 3,628,369 head. 32.01 per cent of Ontario's hogs graded select.

Certain well-defined areas within our Province continue to produce hogs of relatively poor quality. These areas include Southwestern and Eastern Ontario. The Ontario Department of Agriculture has directed its main efforts toward improving the quality of hogs produced in those sections that are below average.

BACON HOG CLUBS

Most boars owned in the Province are maintained for public service, and exert a wide influence over the type and quality of hogs produced in any community. Departments of Agriculture realize that the best way to improve our commercial hogs is by exercising some measure of control over the type of boars used for public service, consequently they are sponsoring a policy known as the bacon hog club policy. Under the terms of this policy, boars are loaned to communities in which clubs are organized. The policy is applicable in only those sections of the Province where good boars are not readily available. This clause has been interpreted by the Departments as referring particularly to Southwestern and Eastern Ontario. The above facts are further borne out by the type and quality of hogs produced in those sections, which hogs are vastly inferior to those produced in Central and Western Ontario. The policy is administered by officers of the Ontario Live Stock Branch, with the Federal Department sharing equally in all costs excepting administration. Any money obtained from the sale or salvage of old boars is retained by the Ontario Department.

Following is a summary of bacon hog clubs up to the end of the fiscal year:

<i>Eastern Ontario</i>	<i>Clubs Formed during 1939-40</i>	<i>Total Clubs Functioning March 31/40</i>	<i>Clubs Disbanded 1939-40</i>
Glengarry	9	15	
Grenville	1	3	1
Leeds	9	11	
Frontenac	1	4	
Stormont	0	1	
Hastings	12	25	
Lennox and Addington	6	10	
Lanark	1	1	
Carleton	1	4	
Renfrew	7	15	

<i>Central Ontario</i>			
Ontario	0	1	
Durham	1	1	
Halton	2	2	
Oxford	0	1	
Grey	1	1	
North Simcoe	1	1	
<i>Southwestern Ontario</i>			
Middlesex	2	4	
Elgin	0	0	1
Kent	11	34	5
Lambton	6	6	
Essex	3	16	
Total	74	156	7

During the year 100 boars were purchased, some for new clubs and some for replacement in old clubs, at a cost of \$3,567.25. Transportation amounted to \$471.82, bringing the total cost up to \$4,039.07. Since one-half was refunded by the Dominion Department, the net cost to the Province was \$2,019.53.

This policy grants authority to place boars under special circumstances. This privilege has been exercised in only those districts where farmers have shown a special desire to improve the standard of their hogs, for example, in some communities farmers, and more particularly junior farmers, have displayed an inclination to purchase pure-bred sows of Advanced Registry breeding for the purpose of participating in a bacon litter competition, or of testing pigs under the Advanced Registry policy. To assist these men in becoming established in the pig business, the Departments have placed boars under the terms of the bacon hog club policy. Boars were placed under such circumstances in the Counties of Oxford, Halton, Grey and Durham. A number of farmers in Oxford County tested sows that had been mated to the club boar stationed there. The results were highly satisfactory, and as a consequence that boar is now a qualified sire.

SOW DISTRIBUTION

The bacon litter competition has been sponsored for the purpose of encouraging the distribution of good sows. Farmers signifying their intention to participate must procure pure-bred sows. Prizes are offered for the outstanding performance of these sows. Such points as size of litter, rate of gains and quality of hogs marketed are considered in awarding prizes. Three competitions were completed during the year, as follows:

<i>County</i>	<i>Number Participating</i>	<i>Number Qualifying for Prize Money</i>	<i>Cost to the Ontario Dept.</i>
Renfrew	12	4	\$20.00
Haldimand	11	3	15.00
Simcoe	28	9	45.00

During the fall months large numbers of pure-bred sows were placed in the Counties of Leeds, Glengarry and Renfrew in anticipation of competitions being conducted in 1940-41. A number of pig clubs were formed last year where the members obtained pure-bred weanling pigs.

The Ontario Department co-operated with the Federal Department in sponsoring the brood sow policy. Extensive plans were made for placing sows following the outbreak of war. Such plans were interrupted when serious outbreaks of hog cholera occurred in various parts of the Province. Health authorities refused to permit the movement of sows from packing plants and stock yards to country points. Members of the Department then made a survey of sows available in the hands of breeders. Practically all the good pure-bred sows available during the fall months were purchased and distributed, a great many going into the three counties mentioned above. A number of sows were held by breeders, bred, and finally offered for sale at a public auction held in the County of Kent during the month of January. Forty-eight bred sows were sold in that sale at an average price of \$45.25. A carload of sows was also shipped to Cochrane District, in Northern Ontario. The cost of sow distribution in the Province was shared by the Federal Department.

BOAR PURCHASES

In addition to the boars purchased for clubs organized in Ontario, members of the Live Stock Branch staff purchased or assisted in the purchase of boars for other Provinces. During the month of October two carloads of serviceable age boars were procured for distribution in Saskatchewan. In December another carload was purchased for that Province, and also a carload of younger boars for the Province of Alberta.

BACON HOG FAIRS

Following is a summary of bacon hog fairs held in the Province during the year:

<i>Location</i>	<i>Grant Paid by the Ontario Department</i>
Elmvale	\$48.34
Cookstown	47.33
Kemptville	50.00
Aylmer	42.67
Napanee	47.00
Caledonia	50.00
Cobden	50.00

Classes for both breeding stock and market hogs were featured. Entries in the latter classes were sold by sealed tender, and in all cases the prices received were considerably in advance of those prevailing on the market at the time of the fair.

SHEEP

The sheep industry in Ontario underwent some decided changes in 1939. A brisk upturn in business appeared owing to the declaration of war. While this upturn was not at all violent, there was quite a considerable demand for breeding stock.

The Ontario Department of Agriculture assisted the Ontario Sheep Breeders to import five stud rams from England and Scotland. These were brought out in an effort to supply Ontario flocks with new blood, which has been badly needed. Suffolk, Hampshire, Southdown and Leicester rams were placed in stud service at the O. A. C., Guelph, for the use of Ontario breeders, while the Lincoln ram was placed in Western Ontario. Many breeders in the Province took advantage of this to secure new blood in their flocks.

LAMB FAIRS

During the season of 1939 lamb fairs were held at various points in the Province, principally in the northern districts. These were held in co-operation with the Federal Department of Agriculture, the purpose being to assist the sheep breeders in those areas to market a uniform type of lamb, and also to encourage co-operative marketing on a graded basis. Prize moneys were paid at each fair and were contributed on an equal basis by the Ontario and Federal Departments of Agriculture.

Clubs were formed during the past year in the Thunder Bay area, for which the Ontario Department of Agriculture purchased 11 Hampshire rams. A pure-bred Southdown club was also formed in the County of Brant, for which six Southdown rams were purchased. Following is a list of lamb fairs held in the Province, and also a list of sheep clubs to which prize money was paid:

Lamb Fairs

Barry Island	\$ 30.00
Mindemoya	26.50
Manitowaning	26.50
Little Current	30.00
St. Joseph's Island	30.00
Lakehead Exhibition	30.00
Dryden	29.50
	<hr/>
	\$202.50

Sheep Clubs

Carleton County	\$ 18.00
Lanark	12.00
Thunder Bay	8.00
Thunder Bay, Chamber of Commerce	8.00
	<hr/>
	\$ 46.00

ASSISTANCE TO EXHIBITORS AT FOREIGN EXHIBITIONS

The Ontario Department of Agriculture has each year given financial assistance, amounting to 50% of the freight charges, to live stock associations exhibiting at Foreign Exhibitions. Each year many of our exhibitors take advantage of such assistance. It makes possible many sales which otherwise would not take place, and it also serves as an advertising medium for Ontario live stock. This assistance was given to cattle, sheep and horse associations and amounted to \$1,067.70, being divided as follows: Cattle, \$607.08; Sheep, \$261.59; Horses, \$199.03.

SWINE CLUBS

Swine Clubs in Ontario are becoming more popular, and in 1939 were decidedly prominent in swine improvement work. Selections are made in most cases from herds where Advanced Registry work is practised. The distribution of these animals in sections of the Province where the percentage of select hogs is low has very materially assisted in improving our commercial hogs. The Durham County Swine Club was the successful winner in the inter-club competition at Guelph. This is one of the counties in which selective swine improvement work has been practised. The Ontario Live Stock Branch contributed \$40 towards prizes in this competition. Following is a summary of the Swine Clubs held in the Province during 1939:

<i>County</i>	<i>Club</i>	<i>Grant</i>
Carleton	Richmond	\$ 19.50
Carleton	Fitzroy & Torbolton	14.50
Durham	Durham	22.50
Grey	Meaford Junior Farmers	13.50
Halton	Halton	16.50
Hastings	Tweed	10.50
Huron	Clinton Lions	30.00
Ontario	Ontario	15.00
Peel	Bolton	6.50
Rainy River	Crozier	15.00
Rainy River	Emo	15.00
Rainy River	Big Fork	19.50
Simcoe	Simcoe County	19.50
Waterloo	Waterloo	30.00
		\$247.50

The following is a summary of the Sheep Clubs in the Province held during 1939:

<i>County</i>	<i>Club</i>	<i>Grant</i>
Carleton	Carleton County	\$ 18.00
Lanark	Lanark	12.00
Thunder Bay	Thunder Bay	8.00
Thunder Bay	Chamber of Commerce	8.00
		\$ 46.00

The following is a summary of Poultry Clubs held in the Province during 1939:

<i>County</i>	<i>Club</i>	<i>Grant</i>
Frontenac	Rotary Boys' & Girls'	\$ 13.00
Renfrew	Griffith & Matawatchan	20.00
Lincoln	Lincoln	13.00
Lennox & Addington	Napanee	17.00
Prince Edward	Pictou	20.00
Huron	Goderich Lions	11.00
Grenville	Kemptville	20.00
		\$114.00

POULTRY

Local Poultry Associations

The Ontario Live Stock Branch has been assisting Poultry men through grants to Local Poultry Associations. The following is a summary of assistance rendered during 1939:

Number of Associations holding a Show during the fiscal year	18
Number of Poultry Judges and Lecturers supplied	16
Total amount of Grants paid to Local Associations	\$831.00
Total Expenditures in connection with Judges, Lecturers, etc.	\$177.23

LIVE STOCK PROTECTION ACT

This Act gives protection to the owners of cattle or sheep killed or damaged by dogs. It provides the municipality or the owner with the right of appeal in cases where there is dissatisfaction with the award made by the Local Valuer. The Act is administered by the Ontario Live Stock Branch and when appeals are lodged qualified Live Stock Valuers are sent to investigate the loss and make final awards. During 1939 appeals were received from the Counties of Ontario, Perth, Halton and Dufferin.

BRANDING OF LIVE STOCK ACT

Under the terms of this Act, the Director of the Live Stock Branch is designated as "Recorder of Brands" for the Province. Since this Act was amended to include poultry, many poultry men have been taking advantage of it. It is generally believed that the branding of poultry has been a strong deterrent in poultry stealing in the Province. A total of 2,643 poultry brands have been recorded to March 31st, 1940.

LIVE STOCK ASSOCIATIONS

The office of Secretary of a number of Ontario Live Stock Associations is held by members of the Ontario Live Stock Branch. These include the following Associations:

- Ontario Horse Breeders' Association.
- Ontario Cattle Breeders' Association.
- Ontario Sheep Breeders' Association.
- Ontario Swine Breeders' Association.
- Ontario Yorkshire Breeders' Society.
- Ontario Berkshire Breeders' Society.
- Ontario Tamworth Breeders' Society.
- Ontario Aberdeen Angus Breeders' Association.
- Ontario Poultry Association.
- Canadian Pony Society.
- Canadian Shire Horse Breeders' Association.
- Ontario Poultry Confederation.

The executive work in connection with these organizations is carried on by the Secretary. In addition to holding annual meetings, some of these organizations hold other meetings of a special nature during the year. Some of these events during 1939 were:

(1) The Sheep Breeders' Field Day, sponsored by the Ontario Sheep Breeders' Association, held during the month of June at the Ontario Agricultural College, Guelph.

(2) The Yorkshire Field Day, sponsored by the Ontario Yorkshire Breeders' Society, also held at Guelph during the month of June.

(3) The Aberdeen Angus Sale, sponsored by the Ontario Aberdeen Angus Association, held in London during the month of June.

(4) The Yorkshire Sale, sponsored by the Ontario Yorkshire Breeders' Society, held this year at Dresden in Lambton County, owing to the cancellation of the Royal Winter Fair.

ONTARIO PROVINCIAL WINTER FAIR

Owing to the outbreak of war, the Ontario Provincial Winter Fair which has been held in the City of Guelph each year, was cancelled. The home of the Fair was taken over by the Militia, with the result that other arrangements had to be made. In an effort to accommodate live stock exhibitors who had fitted commercial cattle, sheep and swine, a "Commercial Live Stock Show" was held at the Union Stock Yards, West Toronto, under the management of the Ontario Provincial Winter Fair. This Show was merely for the purpose of selling to advantage the animals which had been fitted for both the Royal and the Guelph Winter Fairs. The Live Stock Sale at the Show brought a total of \$26,966.62. The Union Stock Yards assisted very materially in making this Show a success. Accommodation was provided and every assistance possible was given by the management of the Stock Yards. The actual prize money paid out at this Show was \$2,236.

A "Seed Show" was also held under the auspices of the Ontario Provincial Winter Fair in the King Edward Hotel, Toronto, during the week of February 12th. This Show was sponsored to provide an outlet for the seed men who were formerly dependent on the Winter Fairs for a place of sale. This Show was quite successful and very much appreciated by the seed men of Ontario.

WOMEN'S INSTITUTE BRANCH ORGANIZATION

Thirty-eight Institutes were organized and 19 disbanded, making the present number of active Institutes 1,391 (including 96 Junior Institutes) with an approximate membership of 40,300.

District Annual Meetings

Annual meetings were held in 98 districts, with a total attendance of 11,385. A representative of the Women's Institute Branch was present at each meeting to assist in planning the home economics programme.

Conventions

Thirteen area conventions were held, with a total attendance of approximately 4,035, the majority being delegates from Institutes or districts. A representative of the Women's Institute Branch attended each convention, as did the President of the Federated Women's Institutes of Ontario. Several of the areas were privileged to hear Mrs. Alfred Watt, O.B.E., London, England, President of the Associated Country Women of the World. Seven areas gave special prominence of Health, featuring Cancer Control. They were indebted to the Society for the Control of Cancer for the presentation of this subject by doctors who are making a special study of cancer.

FEDERATED WOMEN'S INSTITUTES OF ONTARIO

The Provincial Board met in April and November. The officers for 1939-40 were as follows:

<i>Honourary President</i>	Her Excellency The Lady Tweedsmuir
<i>Honourary Vice-Presidents</i>	{ Miss Mary A. Clarke, Supt. Women's Institutes
	{ Mrs. T. J. McDowell, Milverton
<i>President</i>	Mrs. Ernest Duke, Port Carling
	{ Mrs. D. Porter, Pembroke
<i>Vice-Presidents</i>	{ Mrs. J. H. McCulloch, R. R. 2, Brampton
	{ Mrs. J. R. McLachlin, Kingsville
<i>Secretary-Treasurer</i>	Mrs. W. B. Leatherdale, Coldwater

The Federation has been honoured by having The Lady Tweedsmuir act as Honourary President and regrets the loss of an enthusiastic supporter and inspiring leader, occasioned by the return of The Lady Tweedsmuir to England.

The Treasurer's Annual Report showed receipts of \$7,946.47 and disbursements of \$4,750.17, with a balance of \$3,196.30.

The War Charities Fund

In January 1940, the Federated Women's Institutes of Ontario established a Central Fund for War Charities, in accordance with the War Charities Act (Ottawa). This fund is to be used (1) to assist Institutes in outlying districts, or those which are unable to raise funds locally, by supplying them with wool or other material for war work, (2) to contribute gifts of money or equipment to meet bona fide appeals, and (3) to provide a reserve fund which will be quickly available in the event of emergency or disaster. This fund is administered by a special committee.

By an appeal to Institute members only for a contribution of 5 cents each, the sum of \$1,147.83 was raised by March 31, 1940.

Committees

Standing Committees continue to function and Special Committees have been appointed to investigate phases of special war work.

Special War Work

Most of the Institutes are co-operating with the Canadian Red Cross Society in their activities for the relief of suffering and the promotion of health. Others are co-operating with the Navy League, the Salvation Army or the I.O.D.E. Thirty-two Institutes have registered under the War Charities Act. It is regrettable that figures cannot be secured to record the contribution which rural women will make through agriculture to Canada's war effort.

Scottish Rural Women's Institutes

A group of 60 members of the S.R.W.I. toured Southern Ontario between July 29 and August 7, 1939. They visited several Institutes en route, but were particularly enthusiastic about their visit to Stoney Creek, which they considered "a pilgrimage."

Foreign Affiliations

Correspondence has been arranged through the Women's Institute Branch with Institutes and similar organizations in other Provinces of Canada and in other countries, as follows: Australia, 20; England, 35;

New Zealand, 32; Scotland, 7; South Africa, 4. Since the outbreak of war the Federation of British Women's Institutes has made a special appeal for "Letter Friends" to counteract the effect of war in narrowing horizons and to help prevent the feeling of isolation.

Putnam Memorial Fund

Through this fund, which is furnished by the Federated Women's Institutes of Ontario and administered by the Women's Institute Branch, 18 bales, with an approximate weight of 1,865 pounds, were sent to various parts of Northern Ontario. Fewer appeals for aid have been presented than for the past three years, due, in part, to the fact that fewer homes have suffered from forest fires.

CO-OPERATIVE PROGRAMME IN HOME ECONOMICS

The Women's Institute Branch continues to be responsible for an educational programme to promote efficient homemaking. As in previous years, provision was made for the study of each of the following: Clothing and Textiles, Foods and Nutrition, Health Education, Home Crafts, Housing, and Administrative Leadership. Instruction was given through local leader training schools, three-day and five-day short courses, speaker service and officers' rallies.

Because the programme year (July 1 to June 30) does not coincide with the fiscal year, it is difficult to give a clear and accurate picture of the work accomplished through the Co-operative Programme. But some idea of what has been done may be gathered from the reports presented by the home economics instructors.

CLOTHING AND TEXTILES

Local Leader Training Schools

	<i>Buymanship</i>	<i>Care of Clothing</i>	<i>Kitchen Ensemble</i>	<i>Total</i>
Number of Districts	6	4	1	11
Number of Leaders	39	31	6	76
Leaders Reporting Work Completed	17	14	6	37
Number of Meetings Held by Leaders	54	45	43	142
Number of Women Contacted	806	1,214	47	2,067

Summary Days of the Kitchen Ensemble project conducted the previous year were held in five districts, with an attendance of 228. Leaders reported 311 women received instruction. Of these 124 were inexperienced sewers. Some 278 dresses and 230 aprons were completed, with 191 dresses and 168 aprons on display at the Summary Days.

Speaker Service: Ten meetings were held in three districts on the subject "The Well-Groomed Woman," with an attendance of 836.

Short Courses: Eight five-day courses in "The Use of Commercial Patterns" and 12 in "Remodelling" were held, with a total enrolment of 247.

FOODS AND NUTRITION

Local Leader Training Schools

	<i>Fruits for Food and Flavour</i>	<i>Fruit Preser- vation</i>	<i>Meat Cookery</i>	<i>Milk and Cheese</i>	<i>Vege- table Cookery</i>	<i>Total</i>
Number of Districts	7	7	24	1	4	43
Number of Leaders	172	110	427	13	61	783
Number of Institutes Represented	87	58	215	7	32	399

Literature sent out indicates that 12,926 women have received instruction or information in some form.

Summary Days following training schools of the previous year were as follows: "Meat Cookery" in six districts, with 58 Institutes represented and an attendance of 694; "Vegetable Cookery" in six districts, with 53 districts represented and an attendance of 426; "Preservation of Fruits" in two districts, with 23 Institutes and an attendance of 86.

Speaker Service: Sixteen meetings on "Feeding the Family for Health" were held in three districts, with a total attendance of 618; and four meetings on "Table Setting and Home Service," with a total attendance of 130.

Home Demonstrations: Pamphlets outlining home demonstrations in "Relieving Constipation" and "Gaining Weight" were sent to 75 individuals who asked for this service.

Short Courses: Twelve three-day courses in "Meal Planning" and 20 five-day courses in "Meal Planning and Preparation" were held, with a total enrolment of 711.

Research in Food Preservation: The research in food preservation, begun in 1938 by a member of the Women's Institute Branch staff, co-operating with Macdonald Institute and the Department of Horticulture, O.A.C., was continued during the summer and fall of 1939. As a result of this, a bulletin, "Conserve by Canning," has been completed for publication in May 1940 by the Statistics and Publications Branch.

HEALTH EDUCATION

Speaker Service: Forty-six meetings on various phases of Health Education were held in 11 districts, with an attendance of 1,927.

Short Courses: Nineteen five-day courses were held, with an enrolment of 333. The Canadian Red Cross Society certificate in Home Nursing is presented to class members on the completion of this work.

HOME CRAFTS

Local Leader Training Schools

	<i>Home Utilization of Wool</i>	<i>Leather Glove Making</i>	<i>Quilts and Quilting</i>	<i>Total</i>
Number of Districts	5	15	3	23
Number of Leaders	49	117	47	213
Leaders Reporting Work Completed	31	55	9	95
Number of Women Taught	650	571	109	1,330

Reports indicate that 776 pairs of gloves were made.

Summary Days following last year's training schools were held as follows: "Home Utilization of Wool" in one district, attendance 100; "Quilts and Quilting" in six districts, attendance 894.

Short Courses: Fifty-four five-day courses were held in "Needlecraft," four in "Home Utilization of Wool," 19 in "Hooked Rugs" and one in "Block Printing," with total enrolment 1,229.

HOUSING

Local Leader Training School: Five training schools in "Refinishing Furniture" were held, with 33 leaders in attendance. The 12 reports received show 72 women taught and 67 pieces of furniture refinished. Summary Days following the work of the previous year in "Refinishing Furniture" were held in six districts, with an attendance of 180.

Home Conferences: Return visits were made to 14 centres, where instruction in "Home Arrangement" was given last year. The total attendance was 203. Two district meetings were held, with an attendance of 100.

ADMINISTRATIVE LEADERSHIP

Officers' Rallies: Fifty-three districts held officers' rallies, with 488 Institutes represented and total attendance 1,991.

Speaker Service: Ten meetings in "Parliamentary Procedure" were held in one district, with attendance 287.

JUNIOR EXTENSION PROGRAMME IN HOME ECONOMICS

Homemaking Clubs

Training schools were conducted by the Home Economics Coaches in the following Units:

<i>Name of Unit</i>	<i>No. of Schools</i>	<i>No. of Clubs</i>	<i>No. of Members</i>
Being Well Dressed and Well Groomed	7	45	298
Clothes Closets Up to Date	3	16	47
Cotton Accessories for the Club Girl's Room	1	3	9
Cottons May Be Smart	9	41	201
Dressing Up Home-Grown Vegetables	6	28	183
Garden and Canning	19	45	172
Meat in the Menu	10	67	310
Sleeping Garments	31	182	834
Summer Clothes for Girls	2	10	36
The Club Girl Entertains	27	218	1,766
The Milky Way	4	15	65
	119	660	3,321

As a result of the schools in the spring of 1939 and those held in the previous fall and winter, 2,804 club members exhibited at 52 county Achievement Days in the summer of 1939, and 185 at special Garden and Canning Club Achievement Days held in the summer and fall of 1939.

At the four Provincial Grade A Fairs, 493 girls from 49 counties exhibited club work. At the 12 Grade B Fairs, 654 girls from 43 counties exhibited.

One unit, "The Club Girl Entertains," was added to the homemaking club programme for the fall and winter of 1939-40. Twenty-seven training schools were held in this unit, resulting in 218 clubs, the largest number of clubs to carry on the same unit at the same time since the inception of homemaking club work, in 1935.

During the winter of 1939-40, 433 clubs were carrying on with 2,951 active members.

Winter Short Courses

From November 1939 to March 1940, 43 one-month courses in Home Economics were held in conjunction with courses in Agriculture organized by the County Agricultural Representatives. In every course Foods and Nutrition were taught and, in addition, Health Education was included in 14 courses and Clothing in 17. The total enrolment was 1,194, with an average attendance of 21.

Special two-week courses were held in four centres, with an enrolment of 104 and an average attendance of 20.

Girls' Conference

In May 1939, the fourteenth annual conference of rural Ontario Girls was held at the Ontario Agricultural College, Guelph, with 446 in attendance. This conference is organized and carried on by the Women's Institute Branch co-operating with the staff of the College.

GENERAL ACTIVITIES OF THE WOMEN'S INSTITUTE BRANCH

Staff Conferences

Two staff conferences were held during the year. In December 1939, the home economics coaches met for three days to plan the junior programme for the year. In March 1940, the staff of speakers for district annual meetings in 1940 met to discuss the presentation of the Co-operative Programme in Home Economics at these meetings.

Packet Loan Collection

To assist members in the preparation of programme material during the past year, 881 Institutes were served with information on such subjects as: Education, Health and Child Welfare, Legislation, Canadianization, and Home Economics.

Distribution of Literature

Four issues (168,000 copies) of "Home and Country," financed by the Women's Institute Branch and the Federated Women's Institutes of Ontario, were printed and distributed free of charge to each Institute member.

A bulletin on conservation of fruits and vegetables, prepared jointly by the Home Economics staff of Macdonald Institute, Guelph, and the Home Economics Department of the Kemptville Agricultural School, and the Women's Institute Branch, was made ready for distribution in May 1940.

Other literature printed during the year included the Co-operative Programme in Home Economics for 1940-41 and the revision of the leaflets on Fruits, Vegetables and Salads.

New mimeographed material was prepared for distribution to leaders and members of the senior clothing project "Lingerie," and in the junior clubs, "The Club Girl Entertains."

Correspondence

In addition to 90 circular letters with a circulation of about 27,760, approximately 17,000 letters were sent out during the year.

Legislative Grants

The total amount disbursed as grants to districts and to Institutes, which asked for this service and had met the necessary requirements, was \$6,229.50. Of this amount \$3,766.50 was paid to districts and \$2,463.00 to Institutes.

CO-OPERATION WITH OTHER ORGANIZATIONS AND AGENCIES

The Women's Institute Branch wishes to acknowledge the assistance given so generously by other Branches of the Department of Agriculture, especially the Ontario Agricultural College and Macdonald Institute, the Agricultural Representatives Branch, the Fruit Branch and the Agricultural and Horticultural Societies Branch.

The Women's Institute Branch co-operated with the Agricultural Representatives Branch and the Horticultural Societies Branch by providing a lecturer on "Beautifying the Home With Paint" for a series of 12 meetings on Home Beautification in Carleton County, having an attendance of 892 men and women.

With the co-operation of Macdonald Institute and the Ontario Agricultural College, a two-day school for judges of Home Section exhibits at fall fairs was held at the College. There was an enrolment of 44. Instruction and limited practice in judging were included. Assistance was given by members of the Women's Institute staff at the Women's Section of the Agricultural Societies Convention in Toronto, and at several district meetings of the Agricultural Societies.

Co-operation has been continued with such organizations as the Ontario Association for Adult Education, Canadian Red Cross Society, Canadian Welfare Council, Ontario Society for Crippled Children, Canadian Association for Prevention of Tuberculosis, St. John Ambulance Association, Canadian Institute for the Blind and the Canadian National Exhibition.

OUTLOOK

The primary function of the Women's Institute Branch is still to provide an educational programme in homemaking. Our continued objective is to maintain high standards of home life, remembering that homes exist primarily for the promotion of satisfying home life and the development of every member of the family.

The outbreak of the war has, of necessity, affected our viewpoint. Special emphasis has been placed on two phases of homemaking — good nutrition and the conservation of all goods. The Women's Institute programme should be sufficiently elastic that it may meet the unforeseen demands which will be made upon Ontario women during war-time.

FRUIT BRANCH

Following a normal winter and light crops of several of our tender fruits in 1938, expectations were for larger crops, particularly of peaches and grapes, in 1939. The completed figures as issued by the Statistics Branch show substantial increases in strawberries, peaches, grapes and apples, with slight decreases in pears, plums and cherries. Increased plantings in peaches and apples are beginning to show in these statistics as the new orchards come into bearing, and marketing problems will increase unless even larger quantities are absorbed by the processing industry.

The vegetable season was favourable for production of one of the best crops in years. Demand for processing was lighter in some lines and the acreage under contract was considerably reduced, particularly in tomatoes. The late canning season was stimulated by the war situation and as a result a good clean-up was made of all field tomatoes. The winter market was also much better for carrots, potatoes, etc., which will probably result in heavier plantings of these crops.

During the height of the tender fruit shipping season, the outbreak of war, with the unfortunate sugar situation that followed, disrupted markets to such an extent that prices were disastrous. The processing schemes under the Farm Products Control Act helped save the situation as prices for the main canning crops were stabilized earlier in the season and the canneries absorbed a large percentage of the crop.

With a particularly heavy crop of grapes, fresh fruit prices were low and the situation was aggravated by the buying on behalf of the distilling interests of large quantities at prices much lower than for wine purposes. Growers reported that some sales for the wineries were made contingent on the furnishing at reduced prices of a certain percentage for distilling, both deliveries being made to the same plant.

Accurate figures are now available of the total amounts of both fruits and vegetables used by the various processing interests. The Statistics Branch reports that, despite lower unit values in many lines, there were increases in gross values over 1938. Totals were \$3,730,179 in vegetables and \$2,080,873 in fruits, the largest item being tomatoes, with beans, grapes and peaches in order of importance. About 550 million pounds of produce were delivered from the farms to the factories.

Orchard inspection was continued in co-operation with the Federal Department of Agriculture, the fall work just starting when war broke out. As no information as to exports was available, the inspection was completed with the hope that part at least of the crop could find an outlet in Great Britain. The great bulk of the export varieties were found free of apple maggot and, despite the partial embargo enforced against both Canada and the U.S.A., finally found a market in Great Britain to the extent of over 60,000 barrels.

The commercial apple crop again showed an increase, being over the million barrel mark, the figure attained previous to the disastrous freeze of 1933-34. With large plantings during this period not yet in bearing,

the prospects are for a further increase in coming years. Outside altogether of the situation caused by the war, it would be a wise policy for our growers to eliminate the older trees and undesirable varieties from their orchards.

The zoning of our markets for apples by the Federal Government, together with the advertising carried on, successfully disposed of the 1939 crop even if early prices were quite low. The advertising arranged by the Ontario growers themselves in the spring cleared up what looked like a surplus of Spies from the 1938 crop, while the radio and other publicity arranged by the growers and dealers during the fresh fruit season also helped materially with the disposal of the various fruits and vegetables.

Inspection of nurseries under the Plant Diseases Act was intensified so as to complete the list of such firms carrying on business and to see that their stock complied with the regulations required both for local and inter-provincial markets. There are now registered 96 nurseries and a further 12 are under inspection with a view to having their premises also licensed.

During the summer, the cold storage plant at Brighton was repaired by the Public Works Department. A new roof on the entire building was found necessary and this allowed of a change in the height of one room, increasing the storage capacity and permitting of better storing of the fruit therein. The building was again filled to capacity as was the nearby storage at Trenton. With the coming into bearing of many new plantings of McIntosh and Spy in Northumberland and Durham, there will undoubtedly be a shortage of refrigerator space for apples soon in the district east of Toronto.

Owing to the above conditions, it was necessary to arrange for storage of considerable quantities of apples in Montreal and subsequently to look after the same as to condition. Our staff carried out the necessary work and assisted later in the disposal of the fruit for export and on Montreal market.

The vegetable field man covered all parts of the Province in as far as time would permit. Meetings of local units of the Vegetable Growers' Association, together with judging of the crop competitions carried on by the members, formed the greater part of the work. Judging of gardens and field crops and lectures on home gardens to Horticultural Societies, Women's Institutes and Agricultural short courses were included in his activities.

Among other lines of work were lectures on the Reserves, arranged by the Federal Department of Indian Affairs. Great interest is being shown by the residents of these Reserves in their gardens. Similarly, community and veterans gardens are now being carried on in a great many localities and as a result of recent legislation relief gardens have been added. The Department has furnished the services of its Vegetable Specialist to advise on many of these projects.

CROPS, SEEDS AND WEEDS BRANCH

The activities of this Branch during 1939 consisted of the installation and supervision of seed cleaning plants; administration of the Weed Control Act; experimental work with chemical weed killers; demonstrations with chemicals; registration of threshing machines; purchase and shipment of seed grain to Northern Ontario; administration of the lime subvention policy; advertising and payment of prize money to Ontario exhibitors at the International Grain and Hay Show, Chicago; tests with seed treaters and fanning mills; publication of a new weed bulletin; chemical pamphlet and pamphlet on the hulling of clover; payment of grants to district and county seed fairs; maintenance of a Secretary-Treasurer's office for the Ontario Crop Improvement Association; organization of Branches of the Association; assistance at seed fairs; and annual meeting and seed display.

SEED CLEANING PLANTS

Under the seed cleaning plant subvention policy, Federal and Provincial assistance in the form of a grant is available to any person, group of persons, organization or company who install a seed cleaning plant. This grant may be paid on 50% of the invoice price of machines, plus 50% of the freight, not to exceed \$500.00 in any one case. Certain provisions must be complied with in order to qualify for this grant.

New seed cleaning plants were installed during the year at Chesley, Honeywood, Alvinston, Bowmanville, Belleville and Napanee.

Eighty-nine plants have been installed to date. The following is a brief summary of the work done by these plants during the past five years:

	<i>Bushels Grain Cleaned</i>	<i>Pounds Clover and Grass Seeds Cleaned</i>	<i>Farmers Served</i>
1934 - 1935	347,738	3,019,904	7,241
1935 - 1936	515,954	4,219,568	9,070
1936 - 1937	722,795	4,499,128	11,794
1937 - 1938	761,976	2,687,842	12,137
1938 - 1939	787,191	1,975,941	15,550

TESTS WITH SEED TREATERS

In co-operation with the Ontario Agricultural College, tests were conducted with six seed treaters which are recommended for the treatment of seed with mercury dust, the object being to determine the efficiency of the various machines on the market with a view to being in a position to recommend one or more machines which may be used by individual farmers and also included as part of the equipment in central seed cleaning plants. Samples of seed were sent to the Botany Division, Central Experimental Farm, Ottawa, before and after treatment for pathological tests. Reports regarding the results of the tests, together with suggestions regarding how the machines might be improved, were sent to each manufacturer. Improvements have been made to the various machines which have improved their efficiency and it is expected that definite recommendations will be made in the near future.

LIME SUBVENTION POLICY

The lime subvention policy between the Provincial Department of Agriculture and the Canadian National, Canadian Pacific and associated railways was continued. Under the policy, the railways have agreed to reduce the freight 25% on carload shipments of agricultural limestone. The Provincial Department of Agriculture pays 50% of the reduced freight, the maximum grant being \$1.00 per ton.

The following amount of limestone was moved under the policy during the past two years:

1939 — Number of Cars, 100; 3,354.70 tons of Limestone

1938 — Number of Cars, 130; 4,471.12 tons of Limestone

a reduction of 30 cars.

DISTRICT SEED FAIRS

Three district seed fairs were held during the year.

A crop meeting, a judging competition and a seed sale were held at each of these district fairs. Several educational exhibits were set up at each fair, including one from this Branch of the Department of Agriculture. These fairs gave all interested in crop production and crop improvement an opportunity to discuss their problems; to see what could be produced in the district; to dispose of their surplus seed and to purchase their seed requirements. The quality and quantity of exhibits and attendance at each fair was most gratifying.

ONTARIO CROP IMPROVEMENT ASSOCIATION

The Ontario Crop Improvement Association, which was reorganized two years ago, had a successful year, with 23 Branches organized during the year, bringing the total to 40. Some 74 projects were conducted in 1939.

During the spring months 14 seed fairs were held by Branches of the Association, 1,617 exhibitors entered 2,753 samples representing 58,960 bushels of seed for sale; 12,185 attended these fairs and crop meetings, which formed part of every fair.

Total number of Projects conducted in 1939	74
Number of Seed Fairs and Seed Displays held in 1939	14
Number of Seed Fairs and Seed Displays held in 1940	28

The annual meeting in Toronto was the best in the history of the organization. A seed display in connection with the meeting consisted of representative quantities of seed for sale. Information regarding the growth of the display may be obtained from the following figures:

	1939	1940
Number Participating	50	186
Number of Samples	105	328
Bushels of Grain for Sale	31,910	81,683
Pounds of Small Seed	14,200	34,400
Bags of Potatoes		14,495

ADMINISTRATION OF THE WEED CONTROL ACT

Considerable progress was made in the eradication and control of weeds during 1939. Approximately 1,000 weed inspectors were appointed by the municipal councils throughout the Province. Six District Weed Inspectors were appointed by the Department of Agriculture, their duty being to supervise the work and to co-operate with all concerned in the administration of the Act.

Information and supplies in connection with the work were sent out to all municipal weed inspectors from this office.

This Branch endeavoured during the year to make the general public more weed conscious. Our District Weed Inspectors discussed weeds and weed control at short courses, seed fairs, crop meetings and weed meetings. County and municipal councils were visited. A timely article on "The Weed of the Week" appeared in the press during the summer months. An educational exhibit on Field Bindweed, Clover Dodder and Leafy Spurge was set up at several seed fairs. Public opinion regarding weed control is becoming more favourable each year.

Clover Dodder, Perennial Sow Thistle, Wild Carrot, Bladder Campion, Chicory, Leafy Spurge, Cypress Spurge, St. John's Wort, Hawkweeds and Blue Weed are considered as being our worst weeds in the Province.

Indifference on the part of some municipal councils regarding the administration of the Act, and appointment and payment of inspectors constitutes one of our greatest problems.

During the year 7,085 threshing machines were registered under this Act; 4,807 of this number were registered as being for hire, 2,278 as being not for hire.

CHEMICAL WEED KILLERS

Much more interest was shown in chemical weed killers in 1939. Thirty-six county demonstrations were conducted throughout the Province. This Branch paid for rental of sprayers and purchase of material for each of these demonstrations and also supervised the work, the object being to stimulate more interest in this method of eradicating weeds, particularly from roadsides.

Some 2,800,000 lbs. of Stephen Weed Killer, a new patented preparation controlled in Ontario by the Province, was used, in addition to considerable Atlacide and Sodium Chlorate. Twelve new power sprayers were purchased by various counties and municipalities; 18 sprayers were rented and it is estimated that approximately 125 municipalities used this means of eradicating roadside weeds.

Some 10,000 chemical pamphlets were distributed and a talk was given over CBL the latter part of June on chemical weed killers.

Experimental work is being continued by the Branch at the Ontario Agricultural College with a view to making available a chemical which will be effective and cheap and which can be put up ready mixed in small quantities.

PURCHASE OF SEED GRAIN FOR NORTHERN ONTARIO

The purchase of seed grain for Northern Ontario was undertaken by this Branch. The districts of Kenora, Rainy River, Thunder Bay, Algoma, Sudbury, Nipissing, Temiskaming, Manitoulin and the counties of Victoria and Renfrew were included under the policy.

All the grain purchased was graded in accordance with the Canada Seeds Act and no seed grain lower than a No. 1 grade for purity and germination was distributed, with the exception of grain which graded No. 2 on account of the presence of other cultivated grains and color. The Plant Products Division, Production Service, co-operated in the grading of this seed. The distribution was taken care of by Agricultural Representatives in their respective districts.

District	No. of Settlers			No. of Bags Distributed				Total Cost of Seed and Distribution	Amount Cash Received
	Receiving Seed Grain	Paid Cash	Promissory Note	Barley	Oats	Wheat	Potatoes Peas or Gr. Seed		
Algoma	130	91	39	290	523			\$ 1,089.75	\$ 423.58
Cochrane N.	454	103	320	129	1456	25	{ 1402 pot. 49 peas 268 gr. }	9,792.02	2,345.10
Cochrane S.	81	23	58	20	248	15	{ 210 pot. 2 peas 19 gr. }	1,378.50	168.70
Cochrane W.	474	107	367	106	1023	25	{ 1100 pot. 9 peas 313 gr. }	7,320.47	1,178.45
Kenora	30	1	29	67	142			298.80	6.30
Manitoulin	28	12	16	99	59			281.45	93.60
Muskoka & P.S.	196	45	151	227	1640	8	5 peas	3,587.60	733.00
Nipissing	127	6	121	199	1103	8	2 peas	2,529.85	79.70
Rainy River	123	2	121	539	539			1,845.52	
Sudbury	81	2	79	150	499			1,337.71	16.15
Temiskaming	48	1	47	100	327			875.82	10.80
Thunder Bay	79		79	279	517			1,367.30	
Totals	1851	393	1427	2205	8076	81	{ 2712 pot. 67 peas 600 gr. }	\$31,704.79	\$5,055.38

NOTE: Oats were distributed in 3-bushel bags; barley, wheat and peas in 2-bushel bags; potatoes in 75-pound bags, and grass seed in 50-pound bags.

INTERNATIONAL GRAIN AND HAY SHOW

This Branch undertook to stimulate interest in this show among growers throughout the Province. Circular letters and prize lists were distributed. Exhibits were collected at the Ontario Agricultural College, Guelph, and the Department of Agriculture, Essex, and forwarded to Chicago.

Some 103 entries were sent from Ontario, including 93 of grain and 40 of corn. Ontario exhibitors won 70 prizes, including 10 firsts and 6 championships. Total prize money paid by Ontario was \$360.

GENERAL CROP IMPROVEMENT PROGRAMME

The following educational exhibits were set up at several district and county seed fairs, also at the International Plowing Match and King Edward Hotel during Convention Week: "Seed Cleaning Plants"; "Pasture Improvement"; "Smuts of Cereals"; "Fanning Mill Screens"; "Ontario Prize Winning Samples at Chicago."

Seed cleaning demonstrations were attended in several plants and demonstrations on the reconditioning of the fanning mill were conducted at several seed fairs and crop meetings.

Crop meetings in fields and halls were attended in several counties and conferences of seed cleaning plant operators were held at the following points: Ridgetown, Guelph, Belleville and Kemptville.

Timely news articles on crop production and crop improvement were forwarded to the press from time to time during the year. Some 10,000 hay pasture posters were printed and distributed and a pamphlet on reconditioning the fanning mill was given wide distribution.

THE CO-OPERATION AND MARKETS BRANCH

The activities of the Branch are devoted to finding new and larger markets for farm products to take care of expanding production; to improving distribution and marketing methods as now generally adopted and to getting greater net returns for the primary producers.

In Northern Ontario and in Northwestern Ontario this work is being undertaken by Marketing Promoters located at New Liskeard and at Port Arthur, respectively. These Marketing Promoters serve the farmers in their respective districts by giving guidance in the crops to produce and by finding outlets for the surplus products.

Temiskaming and Cochrane Districts

The sales of local grown farm produce during the year under review were much below the volume of the year previous and while prices were slightly higher the farmer's income was lower. Only 12 carloads of hay were shipped, compared with some 50 to 200 carloads each winter during the three years previous. The Marketing Promoter at New Liskeard has encouraged feeding more live stock as an alternative market for grain and fodder crops grown locally. An improved price for live stock has been reported.

The reputation of Northern grown seed grain and of clover and grass seeds has been maintained by insisting on a rigid inspection at the three seed cleaning plants.

Potato crops varied widely. On suitable soil excellent yields of good quality tubers were grown, whereas much of the crop on unsuitable soil types proved disappointing and Eastern potatoes had to be shipped into the area to meet the demand.

Raising of more live stock is now in evidence but the local abattoir has been forced to close down, which may tend to discourage the raising of live stock.

The Marketing promoter, on request, has acted as local fruit and vegetable inspector. Much time was devoted to promote producer owned and controlled buying and selling organizations.

The following illustrate the varied types of organization set up:

New Liskeard Milk Producers,
Noranda Milk Shippers,
Temiskaming Canning Co.,
Timmins Farmers' Market,
Cochrane Grading Plant,
Producers' Co-operative, Charlton,
Producers' Co-operative, Matheson,
Cheese Factory Patrons' Association, Cochrane.

Rainy River, Thunder Bay and Kenora Districts

Much progress has been made during the year in the production and marketing of farm products in these districts. An agricultural consciousness has developed in rural and urban areas. Farmers are changing their production to those commodities which are required for local consumption. Farm crops are being marketed to a greater extent through live stock products. There has been a marked improvement in the proper preparation of products for market, and farmers seem to realize more than ever before that quality counts.

Many contacts, made between producers and consumers in former years, have been followed up. New contacts were made for farm products to the value of \$21,346.27. Many contacts were also made for goods, which were not followed up and reported.

One hundred and three farmers in Kenora area signed contracts to grow malting barley. Eleven thousand bushels were marketed to the company and in addition large quantities obtained for feeding purposes. The project is being continued in 1940 and is also being extended to Thunder Bay District.

Assistance was given in marketing clover seed and satisfactory outlets secured.

Attention was given to the City Markets and all report a record season.

A survey was made of camp requirements for farm products and information passed on to interested parties.

As Milk Control Board Representative, 54 investigations and reports were made. Five prosecutions took place in the area.

Old Ontario

Throughout the year members of the Branch have attended numerous meetings seeking to encourage primary producers to organize for marketing as well as for the purchase of needed supplies. Some contacts have been made with existing co-operatives in an endeavour to have improvements made in the business administration of the companies.

The Assistant Director has again been appointed Secretary-Treasurer of the Fruit Growers' Association of Ontario and of the Ontario Vegetable Growers' Association. This contact has kept the Branch closely in touch with producers' problems of which in more recent years marketing has been one of the more pressing.

Theford Cold Storage Co. Ltd.

This company was in arrears of interest and principal on a loan payable to the Provincial Treasurer and the Government was forced to take over the property of the company to protect its interests and operate the plant for the benefit of the producers of celery and apples in the Theford district.

Certain repairs had to be undertaken to put the equipment in good running condition and it was deemed advisable to rearrange the storage chambers by providing three pre-cooling rooms for handling the celery. This work was completed in time to handle the crops before severe weather set in. The commodities stored comprised 18,347 crates celery, 2,837 hampers apples and 46 hampers lettuce. General satisfaction has been expressed regarding the operation of the plant during the past winter. Confidence largely has been re-established and in the course of time the growers may be able to unite and co-operatively market their products.

Potato Fieldman

Extension work in disease control by demonstration plots by holding meetings and by circulation of pamphlets and other literature has been undertaken by the Potato Fieldman on this Branch. Efforts have been made to develop markets for seed potatoes and for table stock potatoes.

Practically all the fully certified seed grown in the Ontario section was purchased by growers for planting. A large portion of the crop that passed field inspection for Certification but was not graded to the standard of Certified Seed was also purchased for planting. This grade, when treated, made very good seed for commercial crop production. In the spring and fall of 1939 and in February 1940 five cars of Certified Katahdins were shipped to New Brunswick and British Columbia, which proved satisfactory. United States buyers were quite anxious to buy all the Certified Chippewas that had been produced in Ontario but none were shipped out of the Province and practically all of that variety produced in 1939 were purchased for planting in 1940.

Interest in the larger use of Certified seed was stimulated by illustrating to growers the losses they were sustaining by producing crops containing high percentages of disease. This was done by showing to growers the amount of disease in their fields as compared with disease-free crops, and by addresses at meetings explaining the detrimental effect that diseased table stock has on the market.

Disease Control and Varieties

With the introduction into Ontario of the Katahdin and Chippewa varieties the percentage of bacterial and virus diseases and also Late Blight Rot has been greatly reduced. But these two varieties are more susceptible to common scab which is causing some trouble and experiments are being conducted this season for control of this disease.

The Netted Gem (Idaho Baker) has been planted to a greater extent than formerly and some satisfactory crops were produced last year. The acreage in this variety will be slightly increased this year.

FARM PRODUCTS CONTROL BOARD

Under the Farm Products Control Act, the Farm Products Control Board is given authority to create and supervise the operation of local boards for regulating the marketing of designated farm products. The two chief features of the Act are, briefly:

- (1) Provision to enable those who produce and market farm products to constitute marketing machinery of their own through which they may regulate the movement, direct the sale and determine the practices that shall prevail in the distribution of such products.
- (2) Provision for the investigation of marketing conditions and practices in connection with any designated farm product.

LOCAL BOARDS ESTABLISHED UNDER THE FARM PRODUCTS CONTROL ACT TO MARCH 31st, 1940

The Ontario Cheese Producers' Marketing Board: As reported last year, this was the first local board established under the Act. The purpose of the scheme is:

- (1) To require all cheese to be sold in Ontario on local cheese boards under uniform rules and regulations;
- (2) To defray the necessary expenses of the local board by a service charge of five cents per one hundred pounds of cheese marketed.

The extent the local board has achieved its aim and object of stimulating competition in buying cheese is evident from the figures that for the year under review 93.14% of the cheese graded in Ontario was sold on local cheese boards, whereas only 36.60% of the cheese graded was sold on local cheese boards in 1935, the year operations commenced.

Approximately 87,212,341 lbs. of cheese were made in Ontario in 1939 from milk shipped by some 20,000 farmers; an increase in production of 1,252,418 lbs. from 1938.

The Ontario Peach Growers' Marketing Board: Some 611 growers sold 8,557 tons of peaches for processing in 1939, which had a money value of \$374,402.44. This was a substantial increase from the 5,157 tons of peaches sold by 460 growers for processing in 1938, which had a money value of \$251,298.95. The 1929 negotiated minimum price was 2½c per lb., compared to 2⅞c per lb. in 1938. Subsequently "V" type peaches were reduced to a minimum of 2c per lb. this year for all deliveries after September 4th. Processors' tonnage of peaches from their own farms is not included in the above figure.

Peaches for the wholesale and retail fresh fruit trade are exempt from the plan.

The Ontario Asparagus Growers' Marketing Board: Approximately 600 growers sold 2,070,922 lbs. of asparagus for processing in 1939, which had a money value of \$172,608.53. This compares with 1,241,035 lbs. of asparagus sold for processing in 1938, which had a money value of

\$97,479.51. The 1939 asparagus negotiated minimum price of No. 1A (5") was 10½¢ per lb., No. 1B (6") was 9¼¢ per lb., Utility Grade was 7¢ per lb., and No. 2 Grade 5¢ per lb., compared to the 1938 asparagus negotiated minimum prices of No. 1B (6") at 10¢ per lb., Utility Grade 7¢ per lb., and No. 2 Grade 5¢ per lb.

Asparagus for the wholesale and retail fresh vegetable trade is exempt from the plan.

The Ontario Pear, Plum and Cherry Growers' Marketing Board: This local board was established early in the 1938 crop year after a poll of the growers concerned.

The purpose and operation of the local board is identical to the asparagus and peach marketing plans.

Some 2,200 growers sold 1,997 tons of cherries, valued at \$133,081.85; 799 tons of plums, valued at \$20,851.30, and 5,003 tons of pears, valued at \$141,711.27, for processing in 1939, compared to the sale by some 1,560 growers of 1,985 tons of cherries, valued at \$196,575.16; 385 tons of plums, valued at \$10,868.75, and 4,751 tons of pears, valued at \$124,533.79, for processing in 1938. Processors' tonnage of cherries from their own farms is not included in the above figures.

Pears, plums and cherries for the wholesale and retail fresh fruit trade are exempt from the plan.

General: It will be noted from the foregoing that these three grower boards handling five commodities for processing only did a combined total business in excess of \$842,655.39 in 1939, compared to \$678,414.30 in 1938.

Export Bonuses: A most interesting feature of these marketing agreements is the bonus plans at present in operation on asparagus, cherries and peaches whereby the growers concerned have voluntarily agreed to assess their product so as to create a fund to develop export trade.

The 1939 assessment on asparagus was ¼¢ per pound of the total pack and amounted to \$5,177.35. This will be paid back pro rata to processors exporting canned asparagus out of Canada provided those processors had not imported any fresh asparagus for processing for export.

The 1939 assessment on cherries (red sour varieties only) was ¼¢ per pound of the total pack. The fund thus created amounts to \$10,482.34, approximately, and will be pro rated back to processors exporting canned cherries out of Canada on the same conditions as the asparagus fund but with the additional provision that processors will be guaranteed a bonus of 1¢ per pound on exports not exceeding 25% of the total quantity processed.

The 1939 assessment on peaches applied only to the 2½¢ per pound product and was ¼¢ per pound of the total pack. The fund thus created amounts to \$34,314.27, approximately, and will be distributed like the cherry bonus arrangement, except that the guarantee to processors is ½¢ per pound on exports not exceeding 50% of the total quantity processed.

From the foregoing it will be noted that growers have put up \$50,000, approximately, this year of their own money to bonus the export of their own product in processed form. The result has been a largely increased export trade in Ontario canned asparagus, peaches and cherries at competitive export prices. More particularly, the larger proportion of the total canned goods pack has been sold on the domestic market at usual higher prices than those obtained on the export market but growers' total returns for fresh fruit have not been lowered to the export price level.

The Erie-St. Clair Onion Growers' Marketing Board: The Erie-St. Clair Onion Growers' Marketing Board was established September 7th, 1939. The purpose of the plan, which was requested by a large majority of the growers of all nationalities located chiefly in the highly fertile marsh districts around Leamington, Jeannette's Creek and Eriean, Ont., was to set up a central co-operative selling organization through which would be sold the Onion crop produced in the Counties of Essex and Kent.

Subsequently the Ontario Onion Growers' Co-operative Co., Ltd., was appointed the central selling organization and took over the grading, packing, storing and marketing of the 1939 crop.

A further feature of the plan was an agreement arrived at between the Erie-St. Clair Onion Growers' Marketing Board and its selling agency and the Dominion Government, under the authority of the Agricultural Products Co-operative Marketing Act, whereby the latter guaranteed any loss that might be sustained if the selling agency had to dispose of onions below a scale of agreed on average prices. These permitted initial advances to be paid to the growers as soon as the onions were stored in approved warehouses with a final payment due, depending on the season's business, after the selling agency had disposed of the whole crop, usually in April or May of the following year.

CONCLUSION

At the close of the fiscal year the Farm Products Control Board was also engaged in conducting polls relative to the continued operations of the Pear, Plum and Cherry Growers' Marketing Scheme and the Erie-St. Clair Onion Growers' Marketing Scheme. Both these marketing plans included agreements for a further vote of the producers concerned before they would operate in connection with the 1940 crops.

CREDIT UNIONS

Many people in Ontario are vague as to the meaning of credit unions, yet there have been credit unions operating in Ontario for several years. A credit union is a co-operative savings and loan organization. It may be defined as a group of people organized for the purpose of pooling their savings as shares or deposits so that from the funds thus accumulated loans may be made to members for provident or productive purposes at low rates of interest.

More specifically, a credit union is a co-operative organization with three main purposes: first, to promote thrift amongst members by providing a system for accumulating small savings in periodic instalments; second, to provide credit for members at low rates of interest; and, third, to provide a method whereby through self-help members can be educated and encouraged to solve their financial problems generally.

In 1922, the Ontario Legislature enacted the Co-operative Credit Societies Act. The Act was finally proclaimed and came into force in 1928. Since that date 24 charters have been issued incorporating credit unions. In view of the fact this original legislation contained no provision for supervision or control over credit unions it was more or less inevitable that abuses should creep in. Lacking powers of investigation, the Province finally ceased granting new charters some four years ago.

At least 15 of the originally incorporated organizations have progressive memberships and for the most part have been following standard credit union practice. These are:

<i>Description</i>	<i>Name</i>	<i>Incorporated</i>	<i>Membership as at March 31st, 1940</i>
ASSOCIATIONAL:			
Racial	— Essex	Feb. 7, 1929	141
	Hamilton Verband	May 9, 1931	112
	Labour League Mutual	Mar. 27, 1930	251
	London	July 12, 1930	81
	Pride of Israel	July 1, 1931	286
	Radomer	Oct. 30, 1929	96
	Sons of Jacob	June 5, 1929	101
	Young Men's Shidlower	June 6, 1931	68
Religious	— Notre Dame d'Ottawa	Mar. 22, 1929	1,082
	Ste. Anne d'Ottawa	June 5, 1936	1,335
	St. Jean Baptiste d'Ottawa	Apr. 15, 1931	343
OCCUPATIONAL:			
Government	— Dominion Civil Service	Dec. 14, 1928	3,689
Industrial	— International Harvester Twine Mills	Nov. 18, 1935	105
	International Harvester Works Employees	Nov. 18, 1935	890
	Plymouth Cordage	Jan. 3, 1931	229
TOTAL MEMBERSHIP			8,809

The nine remaining incorporated credit unions in most cases have not operated since obtaining their charters and in all probability will be dissolved.

The chief development in the Ontario credit union movement during the year under review was the approval of "The Credit Unions Act, 1940." The same bill rescinded both the Co-operative Credit Societies Act, 1922, and the Credit Unions Amendment Act, 1939. The credit union legislation of the Maritime and Western Provinces, together with that of the United States, was studied at length and throughout the new Ontario bill the highest standard of credit union practice was incorporated. Incidentally, no organization may use the words "credit union" henceforth without being incorporated under the new Act.

Forms of memorandum of association, standard by-laws, and other regulations have now been approved and applications for credit union charters are again being received.

Section 47 of the Credit Unions Act, 1940, requires all credit unions organized thereunder to make reports to the Department at least annually and pursuant to this provision the Inspector of Credit Unions has caused such annual returns to be rendered not later than March 1st in each year. These returns, consolidated for the fiscal year just closed, reveal a steady financial growth by the 15 incorporated credit unions in the Province on the active list, viz.:

Credit Unions operating	15
Total Membership	8,809
Total Number of Borrowers during the year	4,309
Total Share Capital	\$ 390,838.41
Total Deposits	\$1,041,371.27
Total Amount Loaned during the year	\$ 995,726.37
Total Amount Loaned since organization	\$8,293,588.72
Total Assets	\$1,657,909.13
*Total Guarantee Funds	\$ 159,228.41

*Reserve against uncollectible loans and losses. Must be invested in investments authorized by The Trustee Act (Ontario).

The fact that credit union charters have not been available during the past few years has not prevented a now increasing number of organizations throughout Ontario going ahead without incorporation and calling themselves "credit unions." The total sums of money which have been received on shares and on deposit and loaned out by such groups is substantial. While complete figures of these societies have yet to be obtained and compiled, an approximate classification as to organization, membership and resources is as follows:

<i>Description</i>	<i>Number Operating</i>	<i>Number of Members</i>	<i>Total Assets</i>
<i>Associational:</i>			
Co-operatives	4	171	\$ 5,200
Racial	2	165	18,890
Religious	10	656	8,232
Professional	2	80	1,300
Miscellaneous	5	354	8,570
<i>Occupational:</i>			
Educational	2	113	650
<i>Government:</i>			
Federal	3	220	7,330
Municipal	2	617	60,025
<i>Industrial:</i>			
Electric Products	1	77	826
Food Products	1	65	2,100
Metals—Steel and Iron	2	674	10,724
Paper	1	77	800
Printing	2	163	8,200
Public Utilities—Telephone	4	346	6,265
Transportation	4	684	11,100
Total	45	4,462	\$154,212

All of the above unincorporated "credit unions" with whom the Department has been in touch are awaiting the opportunity to take out charters as soon as these are again available. It is interesting to note that from this group has recently come the leadership for the next step forward in achieving the "co-operative ideal of higher federation for the interchange of experience and the promotion and protection of the movement." Credit Union Chapters, comprised of the credit unions operating

in the Cities of Windsor, Hamilton, Toronto and adjoining districts, are being organized and considerable development work has already been undertaken toward the organization of a Credit Union League in Ontario, comprised of all the chapter organizations and individual credit unions operating in areas where chapter affiliation is impossible. Such Provincial Credit Union Leagues have already been set up in the Provinces of British Columbia, Saskatchewan, New Brunswick and Nova Scotia. Centralization in Quebec, the home Province of Canadian credit unions, is even more advanced, where a Provincial federation conducts not only a promotional and educational programme but which also exercises wide powers of inspection and supervision.

In the five months the Department has been associated with credit union operation and development it seems apparent from the interest shown that economic circumstances and conditions are combining to bring about a substantial expansion of the movement in the Province.

HEARST DEMONSTRATION FARM

The growing season was excellent, with all grain maturing. Seeding commenced May 30th and haying operations started July 15th. Some 80 tons of Alfalfa and Red Clover mixture were harvested.

Field Husbandry

Cartier Oats, the only variety sown, took 92 days to mature. The average yield was 26 bushels per acre, due to hail storm that threshed half the crop. O.A.C. No. 21 Barley took 91 days to mature, the yield being 41 bushels per acre.

Animal Husbandry

The herd of Ayrshire cattle is composed of 12 cows, eight two-year-old heifers and four one-year-old heifers. Some of the grades are being discarded and four were replaced by registered cows. The farm now has 16 registered and 8 grades. The herd is headed by Solway Hyacinth, imported in-dam from Scotland, and will be replaced by Kapuskasing Supreme.

One team of horses is kept on the farm.

Four sows were kept and pigs sold to farmers for breeding purposes. Five boars were also distributed in this district.

A small flock of 120 Barred Rocks were kept and 250 pullets, when six weeks old, were sold to farmers at cost price.

One carload of cows and one carload of brood sows were brought to the farm, sold and distributed. This is an effective way to increase good live stock in the district.

The Agricultural Representative is in charge of the farm and has his office there. Many farmers were visitors during the year.

MILK CONTROL BOARD OF ONTARIO

The Milk Control Board, which operates as a Branch of the Department of Agriculture, has completed its sixth year of operations.

As in former years, the purposes of the Milk Control Act have been carried out in that the business of milk distribution and milk manufacture has been supervised in such a way that major difficulties have not arisen. Price structures have been maintained on a level fair to all concerned and the interests of the primary producer have been protected.

The present policy of the Board is partially given in a letter which was addressed by the Chairman of the Board to the Ontario Milk Producers' League and the Ontario Milk Distributors' Association during the past year. The main parts of this letter are as follows:

"There seems to be general agreement that control is essential to the welfare of the industry and of the public. The last five years have been formative ones in which the industry has been adjusting itself to control measures. Naturally, during these years the Milk Control Board has dealt with many situations in much more detail than would have been necessary if control had not been new. We feel that the stage has now been reached where the industry is fully conversant with the Milk Control Act and its Regulations, and should be in a position to practice more self-government.

"Our future policy, accordingly, will be one of promoting more self-regulation by the industry. There are many matters that the Board has dealt with which, we feel, can now be very well handled through the Association, both producer and distributor, individually and working together.

"We suggest, therefore, that your Provincial organizations encourage your members to work through their locals and the locals through the central organizations in order to achieve the goal of more self-regulation. It is gratifying to see the way some very important problems have been dealt with by your respective organizations; for example, the bottle situation by the distributors and the quota problem by the producers with the co-operation of the distributors. Similar methods could be used in dealing with many problems.

"We seem to have increasing demands on our time and it will be necessary to refer more problems back to your respective organizations. We are not wishing to shirk any of our responsibilities and assure you that we will give our utmost co-operation to bring about a programme of orderly marketing of milk in the Province of Ontario."

The result of the recognition of this relationship has been that the Board is more generally looked upon as a necessary body of reference than in the past and as a consequence the work accomplished during the year 1939 can be considered extremely satisfactory.

Because of the fact that in accordance with the provisions of the Act the Board's report has been filed with the Legislature, it is not deemed necessary to include a full report of the Board's activities herewith but only to suggest that the report shows the work of the Board in regulating the milk industry has again been well received by those interested in the milk business of the Province.

REPORT OF PROVINCIAL ENTOMOLOGIST

RESEARCH AND EXPERIMENTAL WORK

Stored Grain Insect Control

On a large number of farms, wheat and, to a much less extent, other grains are infested with one or more species of granary insects. When these are abundant they cause the grain to heat and, if nothing is done to cool it, to mould and become spoiled. This matter has been of great interest to the writer and much attention has been and still is being given to its solution. Granaries have been examined to see the facts; the results of fumigation by the owners with commercial fumigants have been observed; a series of controlled fumigations with different materials has been carried out at the College; and a circular giving instructions for the control of the insects sent last fall to all the agricultural representatives, to a number of leading agriculturists, and to the press.

Some of the more important matters learned during the study are:

1. The source of the infestations in the granaries is not the grain from the field but the presence of these insects in the granary or store-room. Holding grain over from one year to another greatly favours the presence of insects.

2. Most of the fumigation done by the farmers was a failure, partly because the fumigant was used too weak, partly because the bins were not nearly airtight, and partly because they were not covered after treatment.

3. Farmers should try to destroy all or as many as possible of the insects in the granary or barn before putting in the new grain.

4. An excellent method of freeing grain from insects is to run it through the fanning mill at low temperatures. If the right screens are used, almost every insect can be separated from the grain, and as the low temperature quickly makes the insects dormant, they can be gathered up and destroyed.

Further tests of fumigants are being made, after which a new circular on control will be written for use in a campaign for a clean-up before harvest.

The European Earwig

This imported insect, found for the first time in Ontario in the Village of Ayton, in Grey County, in 1938, had become so numerous by September of that year that it was decided to test control measures in 1939 in the whole village (population about 400) and the surrounding land for a few rods back. The Department supplied the materials for the tests, namely: sodium fluoride, molasses and bran, and the villagers co-operated in spreading it over the gardens, lawns and adjoining fields and also where necessary in the houses.

The first application was on July 3rd and a second application was given two days later. The results, as finally observed by two members of the department, were very gratifying. Shortly before treatment, one of

these men had counted 1,560 earwigs in 1½ hours. After the treatment, in the same length of time, only 7 earwigs were found by the above two members of the department. A dozen housewives were interviewed. These, without exception, said that they and every person they had spoken to were delighted with the results and that there was now scarcely an earwig in any house, not even in the houses where they had formerly been most numerous and had caused the most worry. We are, therefore, confident that this insect can be combated successfully if it should spread through the Province and become a serious menace.

Sugar Beet Nematode

Shortly before the time for harvesting sugar beets we received word of a serious outbreak of the much-dreaded sugar beet nematode, *Heterodera schachtii*, in a ten-acre field of sugar beets a few miles northeast of Sarnia. Prof. L. Caesar as representative for the Province, Dr. George Stirrett for the Federal Division of Entomology, and Dr. Brown for the Dominion Sugar Beet Company, jointly investigated the situation and found that the beets in this field were, as reported, heavily infested with the nematode. An examination of this and other districts showed that the outbreak was apparently limited to this one field. A conference was then held and it was decided that the grower of the beets should be allowed to take them to the factory on condition that they were first treated with formaldehyde to kill as far as possible any nematodes present and that certain definite precautions were then taken to prevent danger of spread in hauling the beets to the factory and handling them there. It was agreed that no more sugar beets should be grown on this farm until all danger from the nematode had disappeared. This will probably mean anywhere from 5 to 10 years.

Rabbit Control

The last few years the large European hare, or so-called jack rabbit, has spread over almost every fruit district in Ontario and may now be considered as the greatest enemy of young orchards. We have been testing control measures for two years. These studies so far indicate that satisfactory control probably can best be secured by a combination of several measures, namely: shooting, poisoning, wrapping the trees with burlap or other fabric, repellent washes, and the placing of prunings in heaps here and there throughout the orchard.

As for repellents, in 1938 we tested an emulsion of resin residue and found that it was a good repellent, but in seeking a supply of this in 1939 it was discovered that the cost of the material, which has to be imported from the Southern States, was prohibitive. Therefore, in 1939 we tested a solution of resin in alcohol and also a resin-soap emulsion. Both of these gave good control on young trees all through the early and middle part of the winter, but about the middle of March suckers treated with either of these mixtures and placed in snowdrifts had begun to be attacked. This may indicate that in a bad season a second application may be necessary.

Strychnine used with slices of apple or with alfalfa was found to kill the rabbits readily but has the objection that great caution is necessary, otherwise live stock may be poisoned. We are planning further work with strychnine, especially along the line of finding more satisfactory baits.

Prunings cut in late fall or early winter and left on the ground in heaps were seen to be very attractive to the rabbits and evidently thereby saved many young trees from being attacked.

Wraps made of burlap or canvas about three inches wide and wound tightly around the trunk and lower branches as high as found necessary and then firmly fastened there are being much used and are very helpful. They can be used year after year if properly dried and stored.

Spray Experiments

Again, as in previous years, the Ontario Reformatory and O.A.C. orchards were used for spray experiments. The Botany Department will report on the fungicidal aspect of this work. So far as the insecticidal aspect is concerned, the most important developments this year were demonstrations of the relative merits of stickers as a means of holding the arsenate of lead on the trees long enough to dispense in many orchards with the need of a second apple maggot spray. The experiments indicated strongly that the best sticker was a 1% white oil emulsion and the next best bentonite, preferably with a spreader such as skim milk powder. Ferric oxide, so far as the eye could see, was also an excellent sticker, but a chemical analysis revealed that it did not hold the arsenate of lead on nearly so well as either of the above. Soy bean flour, so often spoken of as a good sticker, was of little value in our tests.

The main objection to the oil emulsion is that on some varieties it tends to cause spotting of the fruit because of the fact that the spray collects in large drops which remain on the fruit and keep the sun from coloring the part beneath. Whether this will be important enough and extensive enough to be serious remains to be seen. Oil, of course, has an added advantage over other stickers in that it helps greatly in the control of codling moth.

Another important result from this year's tests in the Reformatory orchard was that, where a second cover spray with arsenate of lead was used and applied to the underside of the leaves, bud moth injury was lessened 20 to 50 per cent. This extra spray also had much value in the control of the codling moth. Bud moth this year in many orchards throughout the Province was for the first time a very serious general pest.

Turnip Aphid

About the middle of August the common cabbage aphid, often called by growers the mealy bug, had become so abundant on turnips in Middlesex, Brant, Waterloo, Wellington, and a few other counties that it threatened to destroy the crop. Prof. Caesar, on learning of the outbreak, at once went to Middlesex and conducted a series of experiments with sprays and dusts to determine the best method of control.

Good results were obtained with a 4% nicotine dust and also with a solution of 1 lb. of soap in 5 gallons of water. It was necessary, however, in all cases to hit the insects in order to insure a kill. To hit them with a spray, it had to be driven up from beneath and also had to cover the crown or tip of the plant, as this latter part was regularly heavily infested. To do this a spray rod about 3 feet long with one or two angle disc nozzles on the end had to be used. In the case of dusts, it was found that hand dusters were too slow for any large acreage, but that a power duster with a canvas trailer to concentrate the dust on the plants would work well.

Unfortunately, very few farmers were equipped either with a sprayer or with a good duster. In future outbreaks it may be necessary for the farmers to club together and buy or rent a power duster in order to get rapid and satisfactory control. Orchard sprayers can be used by equipping them with nozzles arranged to shoot from both sides as well as down from the top.

Onion Maggot

This year again, lubricating oil emulsion, calomel and corrosive sublimate were tested as controls for the onion maggot. During the preceding two years calomel had given the best results and was found to be much the simplest method, but this year at Collingwood in a heavy infestation the lubricating oil emulsion proved to be more effective than calomel. Corrosive sublimate gave very poor results and showed no superiority over the untreated checks. It will, therefore, be discarded as a control for the onion maggot, though still giving good results in the control of the cabbage maggot.

The price of calomel has gone up so much as a result of the war that it has been decided to postpone further experiments with it until the price returns to normal.

Testing Corn for Resistance to the Corn Borer

This work, in co-operation with the Field Husbandry Department, has been under way now for two seasons. Forty-nine hybrids or varieties were tested in 1938 and fifty-seven in 1939. Most of the hybrids, when compared with our popular varieties, showed a considerable degree of resistance and had also the very desirable merit of standing up much better under attack of borers or of storms. This makes it much easier for farmers to cut the corn low enough to make burial with the plough easy. The work will have to be continued, however, for several years yet before definite recommendations can be made to the growers.

EXTENSION

Spray Service Supervision

This work was carried on in conjunction with the Department of Botany. There is little new to report except that there was an increase in the number of local spray supervisors and that all the men were given a two-day training course at Guelph before beginning their duties. The course covered lectures and discussions not only on insects and diseases but also on orchard fertilizers, pruning, bridge-grafting, and methods of spraying, the last three being taught in the College orchard. The local supervisors reported later that the course had helped them greatly in their efforts to be of service to the growers.

Inspection Tours and Personal Calls

Prof. Caesar has tried every year to visit all the fruit districts and also as many other districts as he can in order to have a personal knowledge of the insect conditions all over the Province and thereby be able to render better service to the public. He has also endeavoured to answer in person special calls for consultation and advice as one of the most effective methods of rendering aid.

Miscellaneous

Addresses were given as usual at most of the fruit conventions and also at some other agricultural meetings.

Press letters were prepared on insects of special importance and sent out to the press and to the agricultural representatives.

The spray calendar was revised in company with the other members of the committee for this purpose.

Correspondence was a very important duty and required much time and thought.

ADMINISTRATIVE DUTIES

The chief administrative duties were the supervision and enforcement of the regulations under the Plant Diseases Act pertaining to nurseries, peach yellows and little peach, Oriental peach moth, apple maggot, European corn borer and black knot.

Nurseries

All nurseries so far as known have now been registered and inspected as far as was found necessary. The total number of the nurseries was 103. This work could not have been completed had it not been for the addition of an extra nursery inspector during this last season. The nurseries on the whole are almost free from any serious insect pest or plant disease.

Peach Yellows and Little Peach

There was a large reduction in the number of trees which had to be destroyed for these two diseases, there being only about one-third as many infested trees in 1939 as in 1938. This is partly the cumulative result of good inspection and partly the result of the scarcity of the plum leaf hopper which is the main agent in the spread of these diseases.

Oriental Peach Moth

So well is this pest being held in control at present by parasites and other natural control factors that the only regulation felt necessary to enforce in connection with it was the sterilization of containers used for peach fruit by the canneries and the treatment of peach refuse to destroy any larvae or pupae present. Both of these were looked after.

Apple Maggot

Although the regulations dealing with this insect were on the average well enforced and some progress made, the progress has not been as great the last two years as we had hoped for. The explanation seems to be that we are passing through a cycle of seasons which are so favourable to the insect that it is almost impossible to bring about a rapid reduction without destroying all neglected orchards for a mile or more on all sides of every commercial orchard. We do not wish, however, to imply that most of our commercial orchards are infested by the apple maggot, for they are not; and the great majority of those infested have only a very light infestation, in many cases only a few apples on two or three trees, sometimes only on one tree.

European Corn Borer

The enforcement of clean-up was just about the same as in 1938. Most growers did their work well without any compulsion; a relatively small number tried to evade the task and hampered the work. However, prosecutions were seldom necessary.

At the end of the season it was found that in most of the counties formerly worst infested, such as Essex, Kent, Lambton, Middlesex and Elgin, there had been a considerable decrease of the insect, but that in the area all along north of these right through to Peterborough and also from Kingston to Ottawa and Montreal, there had been a large increase in the percentage of stalks infested. In fact, many of the counties in these areas were more heavily infested than the counties in Southwestern Ontario. In seeking for the cause of this state of affairs we found that the increase, like most of the increases wherever they occurred, coincided closely with the presence of a good supply of moisture during the critical months of June and July when the moths are emerging, the eggs being laid, and the young borers hatching out and trying to work their way into the stalks or other thick parts of the plant where they would be safe from the sun's rays and from drying winds and enemies. The presence of moisture is very favourable to the insects in the above stages and is sufficient in itself to account for increases. We must remember, however, that the increases this year nearly all occurred in areas where there was no compulsory clean-up of corn remnants—that is, in counties where the Act was not in force.

Black Knot

Inspection for this disease was limited largely to the localities where the inspectors, during their other duties, had observed its presence in 1938, or to localities from which complaints had come in with regard to this disease. The great majority of plum and cherry orchards are quite free from it. Cities and towns are usually the worst infested.

DAIRY BRANCH

In the year 1939 all creameries, cheese factories, and combined cheese factories and creameries applied for a license to operate as required by Section 2, sub-section 1 of the regulations pursuant to the provisions of the Dairy Products Act of 1938. It was the first year a license to operate as issued by the Dairy Branch was required.

Many operators had considerable improvements to make in their plants and equipment before they were issued a license and they were given an extension of time to enable them to complete these improvements. The licensing resulted in a noticeable improvement in the equipment and sanitary condition of many of the plants and has raised the standard of Ontario creameries and cheese factories.

Licenses were issued to 297 creameries, 645 cheese factories and 40 combined cheese factories and creameries.

All creameries and cheese factories were re-inspected for their 1940 licenses during the latter part of 1939. A much larger percentage of the plants were approved for license on the first inspection without having to make any improvements, than was the case in the previous year.

On July 1st, 1939, H. B. Sandwith of Kingston, a former cheese instructor and instructor at the Dairy Division, Kemptville Agricultural School, was appointed chief cheese instructor for Central and Eastern Ontario. Mr. Sandwith's appointment has resulted in more uniform instructional work to cheesemakers in Central and Eastern Ontario.

Dairy Branch Field Staff:—

	1939	1938
Chief Instructors	3	2
Cheese and Butter Instructors	2	2
Cheese Instructors	28	30
Creamery Instructors	10	10
	<hr/> 43	<hr/> 44

Production of Butter and Cheese in Ontario:

<i>CHEESE</i>	1939	1938
Western Ontario	14,397,868 lbs.	14,954,884 lbs.
Central Ontario	13,855,749	13,108,652
Eastern Ontario	59,877,940	57,449,096
Northern Ontario	386,898	447,291
	<hr/> 88,518,455	<hr/> 85,959,923

This indicates an increase in the production of cheese in 1939 of 2.9 per cent as compared with 1938. In 1939 Ontario produced 71.2 per cent of the total cheese produced in the Dominion as compared with 70.9 per cent in 1938.

Federal Grading of Ontario Cheese—

	Total Boxes	No. 1	No. 2	No. 3	Below No. 3	Average Score
Western Ontario	150,151	96.21	3.72	.06	.01	92.437
Central Ontario	233,386	93.99	5.78	.19	.04	92.464
Eastern Ontario	555,021	94.15	5.64	.17	.04	92.364
Northern Ontario	2,349	76.54	22.61	.68	.17	91.291

Average, 1939	940,907	94.40	5.41	.16	.03	92.398
Average, 1938	880,923	94.22	5.62	.11	.03	92.237

In 1939 there were 888,171 cheese placed in first grade of which 60.21 per cent scored 93 points or over, an increase of 13.51 per cent over 1938.

	1939	1938
No. of cheese factories operating	659	655
No. of cheese factory patrons	24,729	24,788
Average per cent fat in milk	3.34	3.39
Lbs. of milk to 1 lb. of cheese	11.43	11.31
Lbs. cheese to 1 lb. fat	2.46	2.57
Money spent on improvements	\$226,388.	\$175,706.
Average price of cheese per lb.	12.69c	14.27c

<i>CREAMERY BUTTER</i>	1939	1938
Western Ontario	56,595,586 lbs.	55,955,853 lbs.
Central Ontario	15,870,060	16,978,003
Eastern Ontario	12,104,550	11,587,987
Northern Ontario	3,673,641	3,371,305
	<hr/> 88,243,837	<hr/> 87,893,148

The production of creamery butter in Ontario in 1939 showed a slight increase of .39 per cent over 1938.

Ontario produced 33 per cent of the total butter production for the Dominion.

	1939	1938
No. of creameries operating	331	335
No. of creamery patrons	90,946	87,465
Average per cent fat in cream	31.9	—
No. of creameries manufacturing condensed or powdered milk	17	17
No. of creameries manufacturing buttermilk powder	23	21
No. of creameries manufacturing whey butter	42	33
No. of visits to creameries by instructors	3,090	—
No. of visits to cream producers by instructors	287	300
Average price of butter per lb.	23.59c	26.88c

Cheese Factory Instruction—

A great deal of time was devoted by the instructors to checking the development of rancid flavours in cheese. This flavour defect was the most prominent defect in Ontario cheese in 1939. In many cases it was traced to the milk supply on the farm. Frequent visits to the producers of poor quality milk on the part of the instructor, checked the development of rancid flavours in many instances.

In 1939 the methylene blue test was used extensively to determine quality of milk as it arrived at the factory and was instrumental in determining the source of poor quality milk.

Methylene Blue Score Cards were introduced in 1939. These cards were sent to the producers by the instructors and indicated the quality of milk produced. These cards also gave instructions for improvement of the milk supply.

The fermentation test and sediment test were also used extensively by the instructors to determine quality of milk.

In 1939 instructors made 19,922 methylene blue tests; 8,312 fermentation tests and 6,417 sediment tests. They visited 3,264 milk producers where poor quality milk was being produced and were successful in assisting the producer to produce better milk. This work had a direct result on the quality of the cheese as an immediate improvement was noticed at factories where producers were visited by the instructor. Many factories manufacturing a large percentage of second grade cheese were able to manufacture first grade cheese entirely.

The instructors tested approximately fifty per cent of the milk samples at the cheese factories and made 12,388 visits to assist cheesemakers in the manufacture of high quality cheese and eliminate mechanical defects caused by improper methods of manufacture.

Creamery Instruction—

The creamery instruction and extension programme adopted and put into practice by the creamery instructors for 1939 was as follows:

1. To endeavour as far as possible to have the certificates in every creamery held by the proper persons and to impress upon each and every certificate holder their duties and responsibilities as such.
2. The application of more uniform methods of scoring the certificate holders on cream grading and cream testing.
3. The elimination of mechanical defects in butter.
4. Extension of service to the producers in regard to the improvement of the quality of the cream.
5. Continued assistance with the work of buttermakers' clubs.

The quality of cream received at the creameries as reported by the instructors was poorer for the first half of the year than for the same period in 1938. After two months of closer checking of the grading at the creameries by the creamery instructors, the creameries themselves began to grade cream more closely to the correct standards. This resulted in an improvement in the quality of cream received at the creameries in the higher grades, they had to take more care of their cream. The last six months of 1939 showed a decrease of approximately 3 per cent in the amount of second grade cream as compared with the same period in 1938. Similarly the quantity of special grade cream improved about 1 per cent for the same period compared with the previous year. The instructors reported 4.1 per cent of the cream received at the creameries to be special grade and 10.3 per cent to be second grade for the year. This is an increase of 0.9 per cent in the amount of special and first grade cream produced compared with 1938.

It is estimated that cream producers lost over \$100,000 in premiums in 1939 for producing second grade cream.

In co-operation with the Dairy Products Division, Marketing Service of the Federal Department of Agriculture, a record of all undergrade churnings of butter graded by the dairy produce graders were reported to the Dairy Branch together with the defects of each churning. Each instructor was immediately notified of the defects in the butter made at creameries in his group.

As considerable butter was being placed in undergrade because of faulty workmanship, efforts were concentrated on this problem. These mechanical defects were tabulated in an effort to find which were the most serious and to ascertain the causes. In order that our efforts to eliminate these defects would be more effective, they were to have a bearing on the standing of the certificate holders should any of them fail to rectify their trouble after being given instruction as to how it could be done. Free moisture was the most serious mechanical defect, comprising 51.67 per cent of the total. Uneven colour was responsible for 21.3 per cent of the total defects, followed by poor packing and finish of 12.0 per cent, faulty texture 9.9 per cent, undissolved salt 4.3 per cent, and neutralizer flavour 0.9 per cent.

Ten certificate holders who had most of their butter graded did not have a single mechanical defect recorded against them. Eight had only one defect, ten had two, and seven had three defects. While the above includes only about 11 per cent of the total creameries, it nevertheless is a creditable showing and indicates that it is possible to keep these defects to a minimum.

As the instruction programme adopted for 1939 entailed considerable work within the creameries themselves, the producers did not receive the individual attention as was planned. However, where necessary cream producers were visited, but these for the most part were those who complained about their grades, weights or tests. General producer instruction was conducted as in the past several years by giving special lectures on this subject at the agricultural short courses conducted by the Agricultural Representatives' Branch, and the Dairy Branch in co-operation with the Ontario Cream Patrons' Association, assisted in the dispensing of information of this nature at fall fairs.

Some 33 agricultural short courses were attended at which the aggregate attendance was close to 1,400. Cream quality competitions were sponsored by some 35 fall fairs at which the creamery instructors acted as judges. Junior farmers' cream grading and judging competitions were also conducted at several fairs including two seed fairs.

One new buttermakers' club was organized in 1939 in the North Bay district. One which had been dormant for a few years reorganized in the spring. There are now seventeen buttermakers' clubs in operation in Ontario.

ONTARIO DEMONSTRATION FARM, NEW LISKEARD

The season of 1939 was unfavourable for crop production, particularly on low, flat or poorly drained farms and this was true of the Demonstration Farm. Many rolling farms had better than average crops. The spring was wet, backward and excessive moisture delayed most of the seeding on the New Liskeard farm until well into June and consequently a large percentage of the harvesting was done in September when the weather was dull and damp.

Seasonal Notes —

- April 27—Ice went out of Wabi River.
- May 10—Ice went out of Lake Temiskaming.
- May 26—First work on land.
- May 29—Turned cattle into pasture.
- June 3—Commenced seeding.
- July 7—Completed sowing.
- July 12—Commenced cutting hay.
- July 25—Finished haying.
- August 10—Commenced filling silo.
- August 17—Cut Fall Wheat.
- August 26—Commenced cutting second crop of hay.
- August 28—Started to cut oats.
- September 1—Commenced to sow Fall Wheat.
- September 6—First frost.
- September 13—Completed cutting grain.
- October 17—Harvested small vegetables.
- October 12—Cattle in for winter.
- October 30—Finished ploughing.

FIELD HUSBANDRY

No small plot work was carried out this year as it was felt that plots of one acre or more were better for demonstration purposes and more in common with the farmers' conditions.

The following table gives the acreage yield and time of maturity of most of the crops grown on the farm:

GRAIN			
	<i>Acreage</i>	<i>Total Yield</i>	<i>Time of Maturity</i>
Alaska Oats	6	180 bus.	81 days
Cartier Oats	8	200 "	80 "
Erban Oats	13	455 "	86 "
Mixed Grain (Oats and Barley)	15	600 "	79 "
Barley	5	115 "	84 "
Fall Wheat	4	72 "	
Spring Wheat	8	120 "	87 "
Potatoes	$\frac{3}{4}$	68 bags	

CANNING FACTORY PEAS

	<i>Acreage</i>	<i>Yield of Green Shelled Peas</i>	<i>Time of Maturity</i>
Alaska	.8	2,294 lbs.	59 days
Wisconsin Sweets	.8	2,909 "	61 "
Perfection	.8	2,724 "	68 "
Advancer	.8	2,169 "	67 "
Horsefords	.8	2,506 "	68 "
Thomas Laxton	.8	1,629 "	61 "

The price paid by the factory for shelled peas was \$38 per ton. Half of each variety was fertilized with 2-12-10 at the rate of 250 lbs. per acre, but there was practically no increase in yield on the fertilized portion.

HAY

Hay was a good crop and of good quality, as it was practically all cured without getting wet. Increased tonnage from alfalfa or an alfalfa mixture as compared to timothy was clearly demonstrated.

SILAGE

Three crops were used for silage. Pea straw from the canning factory, sweet clover and second crop mixed hay which was 90% alfalfa.

The ensilage kept well and gave satisfactory feeding results. The sweet clover froze considerably around the outside of the silo. The pea straw will be more satisfactory than the other two crops for feeding in late spring and early summer when the weather is warm. Often only small quantities are used, as it heats once and then cools off. Consequently it keeps fresher and sweeter in warm weather.

The alfalfa ensilage had 50 lbs. of molasses added per ton of green fodder and was more palatable than the other two crops. This was particularly noticeable when fed to calves.

LIVE STOCK

The live stock division consists chiefly of supplying foundation stock and assisting in arranging for the purchase of breeding stock from other districts.

The Annual Auction Sale of surplus live stock was held on August 16th. The interest and attendance at the sale has been increasing each year and it appears to be an efficient means of distributing live stock throughout the north. Some live stock was shipped over three hundred miles. The prices exceeded those obtained by private sales.

SWINE

One brood sow was purchased from the Ridgetown Experimental Farm, raising the number of sows to six. We have had low mortality and no young pig troubles. The sows were fed Potassium Iodide and the young pigs reduced iron or Ferric Sulphide.

SALES FOR THE YEAR 1940-41

Boars sold for breeding purposes	24
Sows sold for breeding purposes	29
Sold for meat	20

CATTLE

The Dual Purpose Shorthorn cow is steadily gaining in popularity among the settlers and farmers of the Northern District not supplying a fluid milk market. There has been an increased demand for breeding stock. All desirable females were kept to increase the breeding herd and no females were sold except those culled out and sold for beef. Eight bull calves were sold during the year and no market cattle were fed.

All our cows are entered for R.O.P., except those reserved to raise our bull calves as only the heifer calves are pail fed.

HORSES

Three purebred Percheron stallion foals were raised and one mare is in foal again. The mares were all inoculated for joint ill and the foals were all born healthy and strong. This was a point of special interest to many of the farmers as joint ill is very prevalent in some localities. The mares were fed Potassium Iodide during the winter.

SHEEP

A flock of fourteen Oxford Down ewes were purchased for the Demonstration Farm late in October.

POULTRY

The work in the poultry division has chiefly been the production of foundation stock for local farmers and also supplying advice on poultry management and disease problems.

There has been an increased demand this year for breeding stock, both male and female and also hatching eggs. The White Leghorn flock was disposed of and only the New Hampshire Red and Barred Plymouth Rocks were kept.

HORTICULTURE

The farmers have been encouraged to plant trees and shrubs around their farm buildings. A number of raspberry canes were distributed.

A bed of strawberries was planted and also a number of trees were planted last year on the Demonstration Farm. It is expected that tree planting will be extended in future years.

EXTENSION

Thirty meetings and eight fairs were attended during the year. Fifteen organizations or groups visited the Demonstration Farm.

SOIL WORK

A constant check has been kept of the soil analysis on the Demonstration Farm and many farmers have been assisted in obtaining information regarding their soil by sending soil samples to the Ontario Agricultural College. A full report on these samples has not been issued. However, tests taken so far indicate a definite deficiency in phosphorous in the majority of the samples, even on virgin soil and many samples showed definite acidity.

Four fertilizer plots were laid out in different sections of the District, but the seeding and harvesting conditions were so adverse that the results obtained were of no value.

DEMONSTRATIONS

Pasture. White blossom sweet clover was used again this year as a means of bridging the pasture crop from the time the common pasture grasses begin to dry up, until the second crop clovers are available. This has proven successful and fall wheat has been a satisfactory crop to follow the sweet clover.

Curing of Hay. The tripod method of curing hay was used on the Demonstration Farm and created considerable interest. This method is practical in Northern Ontario as there is usually too much moisture in late June and early July to make hay the regular way. Many farmers are planning on putting some hay on tripods this year.

Hog Pastures and Self Feeders. The pasturing of hogs on clover and grain, supplemented by grain feeding in self feeders plus buttermilk, has been of considerable interest to many farmers. The hogs were fenced with a single wire electric fence.

An old poultry brooder house was again used for wintering breeding sows and has proven satisfactory. The sows are allowed to run at will and feed out of a self-feeding grain hopper. They wintered in good condition and farrowed litters ranging from 10-12 healthy pigs.

Reinforcing of Manure. Stable phos was used in most of the stables, and as a result the floors were much dryer and there were fewer offensive odours.

SUMMARY

Many of the farmers of Northern Ontario are taking more interest in the management of their farms and live stock.

More mail enquiries were received this year seeking advice on care and management of live stock and general farm problems. A larger number of farmers visited the Demonstration Farm and were particularly interested in improved varieties of grain, fertilizer experiments, and the care of live stock.

In feeding demonstrations farm officials endeavoured to emphasize the value of feeds that farmers can produce themselves, such as green feed, milk or milk products, thereby eliminating the purchase of large quantities of expensive concentrates. This has been especially true in poultry and swine feeding demonstrations.

PART I — AGRICULTURAL STATISTICS

The gross value of agricultural production in Ontario during the year 1940 is estimated at \$363,584,000. This is a decrease of practically \$8,500,000 from the value of farm output in 1939, which amounted to \$372,087,000, but is higher than any other year since 1930, when the value amounted to \$416,162,000. Compared with the previous year, field crops in 1940 showed a decline of \$15,425,000, tobacco a reduction of \$9,144,000, and clover and grass seed a decline of more than 50%, dropping from \$1,381,000 to \$642,000. On the other hand, dairy production rose from \$87,654,000 in 1939, to \$98,933,000 in 1940, farm animals from \$61,196,000 to \$63,681,000, and poultry and eggs from \$22,875,000 to \$24,438,000.

For the whole of Canada the gross value of agricultural production in 1940 is estimated at \$1,235,714,000, a slight gain over the year 1939, when production was valued at \$1,224,616,000.

The acreages devoted to other crops in 1940 were as follows:—Orchards, 180,300; strawberries, 9,600; vineyards, 14,600; other small fruits, 13,800; summer fallow, 181,800; pasture (cleared), 2,712,000.

RAPE.—The estimate for 1940 was 16,900 acres of which 6,309 are in Wellington, 2,076 in Grey and 2,579 in Dufferin.

THE WEATHER

TEMPERATURE.—The following table gives the temperature of the Province for each month during the last five years, together with the mean annual temperature for the six months, April–September, practically the growing season, together with the average for the five years, 1936–1940, and fifty-nine years, 1882–1940.

Months	1940	1939	1938	1937	1936	1936– 1940	1882– 1940
January.....	13.5	18.7	16.2	25.0	16.1	17.9	18.3
February.....	19.0	19.0	22.2	23.5	11.1	19.0	17.8
March.....	22.3	24.7	32.1	24.6	31.0	26.9	27.5
April.....	38.5	37.9	43.6	41.0	37.2	39.6	41.4
May.....	52.9	55.4	53.3	54.6	56.2	54.5	53.5
June.....	61.8	63.9	63.5	63.5	62.3	63.0	63.4
July.....	67.9	67.8	69.5	68.7	69.2	68.6	68.4
August.....	66.2	68.9	70.3	70.1	66.1	68.3	66.0
September.....	57.7	59.2	56.1	57.6	59.8	58.1	59.4
October.....	45.4	47.7	49.5	44.7	45.9	46.6	45.5
November.....	34.0	33.2	37.4	35.8	30.1	34.1	35.2
December.....	25.1	27.1	25.0	20.9	26.2	24.9	23.5
Annual Mean.....	42.0	43.6	44.9	44.2	42.6	43.5	43.3
Mean for six months April–September.....	57.5	58.9	59.4	59.2	58.5	58.7	58.7

The mean temperature for 1940 was 42.0 or 1.6 below the preceding year, and 1.3 degree below the normal of the fifty-nine years, 1882–1940.

The mean of the six months, April–September, was 57.5 or 1.4 degree below the preceding year and 1.2 degree below the fifty-nine year normal.

Nine months were below normal and three above. December had the greatest departure above with 1.6 degrees, and March the greatest below with 5.2 degrees.

SUNSHINE.—In the following the averages of sunshine are derived from the records of the weather stations at Woodstock, Toronto, Lindsay and Ottawa.

Months	Sun. above horizon	1940	1939	1938	1937	1936	1936- 1940	1882- 1940
	hrs.	hrs.	hrs.	hrs.	hrs.	hrs.	hrs.	hrs.

September.....	376.3	172.5	173.1	172.1	189.6	194.9	180.4	182.3
October.....	340.2	148.7	135.7	183.1	95.4	137.3	140.0	140.1
November.....	286.9	62.2	118.1	110.4	80.8	92.0	92.7	78.1
December.....	274.3	62.5	65.9	60.7	69.5	82.2	68.2	61.6
For year.....	4474.4	1859.8	1991.9	1982.4	1892.6	1955.0	1936.3	1904.7
For six months April-Sept- ember.....	2614.9	1250.3	1387.8	1327.7	1328.5	1371.8	1333.1	1306.1

The year 1940 had 1,859.8 hours of sunshine or 44.9 hours lower than the average for the fifty-nine years. The six growing months, April-September, had 1,250.3 hours or 55.8 below average. Five months were above and seven below. July had the greatest departure above with 21.8 hours and May the greatest below with 50.1 hours.

Please note that in the Sunshine tables Kingston is not included as this station has ceased recording Sunshine.

The rainfall for the six months, April-September, comprising what is regarded as the growing season for most crops, is given in the following table covering the last five years, 1936-1940, and the normal for the fifty-nine years, 1882-1940.

Months	1940	1939	1938	1937	1936	1936- 1940	1882- 1940
	in.	in.	in.	in.	in.	in.	in.
April.....	1.87	1.89	1.99	3.52	1.95	2.24	1.91
May.....	4.09	1.89	2.53	2.61	1.16	2.46	2.67
June.....	3.46	2.76	2.60	2.88	2.64	2.87	2.82
July.....	2.54	3.04	3.56	3.10	1.34	2.71	2.86
August.....	3.27	3.16	3.40	2.97	2.37	3.03	2.66
September.....	2.72	2.77	3.55	3.09	3.85	3.20	2.81
Total for six months...	17.95	15.51	17.63	18.17	13.31	16.51	15.73

The rainfall for the six months, April-September, was 17.95 or 2.44 inches more than preceding year, and in comparison with fifty-nine years 2.22 inches above. Three months were above and three below. May, with 1.41 above and July with 0.32 below, had the greatest departure during the growing season.

PRECIPITATION.—The fall of both rain and snow for the five winter months including November, 1940, and March, 1941, is given in the following table for five years, together with the average for the sixty years, 1882-1941. Ten inches of snow is equivalent to one inch of rain.

Months	1941	1940	1939	1938	1937	1936- 1941	1882- 1941
	in.	in.	in.	in.	in.	in.	in.
November, 1940:							
Rain.....	2.11	0.66	1.31	2.12	1.15	1.47	1.97
Snow.....	17.6	1.6	8.8	4.4	11.0	8.7	7.6
December, 1940:							
Rain.....	1.76	0.94	0.68	0.27	1.75	1.08	1.18
Snow.....	13.4	7.4	20.1	22.9	12.4	15.2	15.3
January, 1941:							
Rain.....	0.38	0.39	0.42	0.70	2.82	0.94	0.92
Snow.....	19.9	19.7	21.3	17.0	11.3	17.8	18.6
February, 1941:							
Rain.....	0.23	0.13	1.01	2.18	1.27	0.97	0.71
Snow.....	15.7	14.8	25.0	9.4	11.9	15.4	15.4
March, 1941:							
Rain.....	0.23	0.58	0.69	2.07	0.15	0.74	1.15
Snow.....	12.0	18.4	15.5	7.2	11.0	12.8	11.3
Five Months:							
Rain.....	4.71	2.70	4.11	7.34	7.14	5.20	5.93
Snow.....	78.6	61.9	90.7	60.9	57.6	69.9	68.2

The total amount of rainfall for the five months was 4.71 inches or 1.22 below average of the sixty years, 1882-1941. The total amount of snowfall was 78.6 inches or 10.4 inches above normal.

TEMPERATURES, 1940

TABLE I.—Showing for each month the highest, lowest, mean daily range and mean temperature at the principal stations in Ontario for 1940; also the annual mean for each station.

Total:						
All occupations	45,455	43,971,064	46,964	43,743,186	44,957	43,616,173
Farmers as given	6,447	13,510,604	7,043	14,385,556	7,252	15,227,048
*Occupations not given	25,860	12,822,504	28,257	16,743,782	25,202	16,085,409

*A number of these may be "farmers." Nearly every clerk reports a number of instruments as unclassified as to occupation. Certain finance corporations have adopted the practice of filing chattel mortgages instead of liens on automobiles. This is very noticeable in Essex and Middlesex Counties (included in unclassified).

PART III.

Comparative Farm Statistics for
Fifty-Nine Years—1882-1940

STATISTICS OF FARM CROPS
FALL WHEAT AND SPRING WHEAT

The following table gives the area, produce and market value of Fall Wheat and Spring Wheat for the years 1882 to 1940, together with the annual averages for the various periods of ten years and the average for the fifty-nine years.

Years	Fall Wheat				Spring Wheat			
	Acres	Bushels	Per acre	Market Value	Acres	Bushels	Per acre	Market value
	\$				\$			
1940	775,400	22,699,000	28.5	13,922,000	69,200	1,301,000	18.8	846,000

STATISTICS OF FARM CROPS
PEAS AND BEANS

The following table gives the area, produce and market value of Peas and Beans for the years 1882 to 1910, together with the annual averages for the various periods of ten years and the average for the fifty-nine years.

Years	Peas				Beans			
	Acres	Bushels	Per acre	Market value	Acres	Bushels	Per acre	Market value
				\$				\$
1940	55,200	894,000	16. 2	1,672,000	84,800	1,264,000	14. 9	2,212,000

*The combined average area for corn for the ten years, 1882-1891, was 195,878 acres, the average value of the produce for the same period being \$3,704,614. The combined average for corn for the fifty-nine years, 1882-1940, was 484,001 acres, the average value of the produce for the same period being \$14,320,143.

STATISTICS OF FARM CROPS

POTATOES AND TURNIPS

The following table gives the area, produce and market value of Potatoes and Turnips for the years 1882 to 1910, together with the annual averages for the various periods of ten years and the average for the fifty-nine years.

Years	Potatoes				Turnips			
	Acres	Hundred-weight	Per acre	Market value \$	Acres	Bushels	Per acre	Market value \$

VALUE OF LIVE STOCK ON HAND

The following table gives the value of Horses, Cattle, Sheep, Swine and Poultry on hand in June of each year for the fifty-nine years, 1882-1940, except for the ten years, 1882-1891, when farm live stock was valued in bulk.

Years	Horses	Cattle	Sheep	Swine	Poultry	Total
	\$	\$	\$	\$	\$	\$
1940	57,885,423	102,535,567	6,458,560	20,690,702	14,600,381	202,170,633

THIRTY-NINTH ANNUAL REPORT

OF THE

Temiskaming and Northern Ontario Railway Commission

ONTARIO GOVERNMENT RAILWAY
HONOURABLE MITCHELL F. HEPBURN, PREMIER

FOR THE YEAR ENDED
March 31st, 1940

PRINTED BY ORDER OF
THE LEGISLATIVE ASSEMBLY OF ONTARIO
SESSIONAL PAPER No. 23, 1941

TORONTO

Printed and Published by T. E. Bowman, Printer to the King's Most Excellent Majesty
1941

Toronto,
April 2, 1941.

TO THE HONOURABLE ALBERT MATTHEWS,
Lieutenant-Governor of the Province of Ontario.

MAY IT PLEASE YOUR HONOUR:

The undersigned has the honour to present to Your Honour the Thirty-Ninth Annual Report of the Temiskaming and Northern Ontario Railway Commission, for the year ended March 31st, 1940.

Respectfully submitted,

M. F. HEPBURN,
Prime Minister and President of the Council.

TEMISKAMING AND NORTHERN ONTARIO RAILWAY COMMISSION

North Bay, Ontario,
September 30th, 1940.

HONOURABLE MITCHELL F. HEPBURN,
Premier, Province of Ontario,
Parliament Buildings,
Toronto, Ontario.

SIR:

In conformity with Section 36 of the Temiskaming and Northern Ontario Railway Act, Chapter 55, Revised Statutes of Ontario, 1937, I have the honour of submitting the Thirty-Ninth Annual Report of the Temiskaming and Northern Ontario Railway Commission and its subsidiary, the Nipissing Central Railway Company, for the fiscal year ended March 31st, 1940.

RESULTS OF OPERATION

	Year Ended March 31st, 1940	Year Ended March 31st, 1939
Operating Revenues.....	\$5,457,400.54	\$5,041,251.77
Operating Expenses.....	3,748,728.78	3,637,627.08
Net Operating Revenues.....	1,708,671.76	1,403,624.69
Operating Ratio.....	68.69%	72.15%
Non-Operating Income.....	50,930.74	33,662.84
Gross Income.....	1,759,602.50	1,437,287.53
(a) Deductions from Gross Income.....	546,544.56	535,281.75
To Profit and Loss Account.....	1,213,057.94	902,005.78
(b) Adjustments—Net debit.....	58,338.16	60,303.69
Net Profit for year.....	1,154,719.78	841,702.09
Previous surplus.....	3,472,088.42	2,630,386.33
Surplus—end of year.....	4,626,808.20	3,472,088.42

NOTE (a) Deductions from Gross Income include Hire of Freight Cars (debit balance) Joint Facility Rents, Interest, etc.

NOTE (b) Adjustments, net debit—include amounts written off account Road and Equipment retired, doubtful accounts, and similar items.

It will be observed that Operating Revenues for the year were \$5,457,400.54, this being an increase of \$416,148.77, or 8.25%. This establishes a new high record.

Operating Expenses increased \$111,101.70 or 3.05%.

Net Operating Revenues were increased by \$305,047.07 or 21.73%.

Net profit for the year stood at \$1,154,719.78, being an increase over previous year of \$313,017.69, or 37.19%.

This Net Profit remains after payment of interest on Bond Issue and current Bank loan and represents earnings at the rate of 3.82% on the \$30,207,935 invested by the Province in the property.

FINANCIAL

During the year under review, the current Bank loan was reduced from \$3,825,000 to \$3,300,000, a reduction of \$525,000. Debentures due February 1st, 1940, to the value of \$111,000 were paid off, making total debt reduction for the year of \$636,000.00. New equipment and other betterments of facilities were financed from current income.

TRAFFIC

The most notable feature in traffic was the increase in the movement of freight commencing about September 1st, 1939, and being coincident with the outbreak of War. For several months before the War began freight had been moving in larger volume than in 1938, but during the months of September, October and November 1939, the increase, measured by Net Revenue Tons, moved one mile, was about 40% over the same months in 1938. The greatest increases in car loadings were in lumber, pulpwood, pulp and paper, and ore, while at the same time there was a very heavy movement of general merchandise to the mining Communities.

While the volume of freight being moved stood at record figures, passenger traffic continued to decline throughout the year. As noted in previous years, this condition of declining passenger traffic may be expected to continue, and the only thing that can be done about it is to reduce the passenger train mileage as far as may fairly be done without depriving the people of reasonable passenger service.

At the time of writing, the prospects for heavy traffic in 1940 are good.

GENERAL

The road bed and all rolling stock have been kept in first class condition, and the railway is prepared to meet any demands which may arise as result of War conditions.

Economic conditions throughout the north are good. New buildings are not being erected to the same extent as in former years, and in some sections, retail trade appears to be quiet. There is a very heavy demand for all forest products. While some mines have curtailed their activities to some extent, others are producing in greater volume, with the net result that mining activity remains at a high level. There is every reason to believe that the market for the products of the north will continue to be good, and that the Railway will continue to be called upon to move these products to a greater extent than ever before.

Throughout the year, investigations have been continued to learn the value of the lignite deposits at Onakawana, in co-operation with other Departments of the Government. A great amount of valuable information has been developed, and investigations are being continued.

NIPISSING CENTRAL RAILWAY COMPANY

A separate balance sheet together with statement of operating results on the Nipissing Central Railway is submitted. These statements are self explanatory, and it will be observed that this Company had a small Net loss of \$8,973.84 for the year.

All of which is respectfully submitted.

A. H. CAVANAGH,
Chairman and General Manager.

Thirty-Fifth Annual Report

OF THE

ONTARIO MUNICIPAL BOARD

To December 31st, 1940

PRESENTED TO THE LEGISLATIVE ASSEMBLY
BY COMMAND

SESSIONAL PAPER No. 24, 1941

TORONTO

Printed and Published by T. E. Bowman, Printer to the King's Most Excellent
Majesty, 1941

April 9th, 1941.

Dear Sir:

Re Thirty-Fifth Annual Report

I have the honour to send you herewith the Thirty-fifth Annual Report of the Ontario Municipal Board to December 31st, 1940.

Your obedient servant,

M. B. SANDERSON,
Acting Secretary.

The Honourable T. B. McQuesten,
Minister of Municipal Affairs,
Parliament Buildings,
TORONTO.

TO THE HONOURABLE ALBERT MATTHEWS,

Lieutenant-Governor of the Province of Ontario, in Council,

MAY IT PLEASE YOUR HONOUR:

The undersigned has the honour to transmit herewith the Thirty-Fifth Report of the Ontario Municipal Board for the year ending December 31st, 1940.

Respectfully submitted,

T. B. McQUESTEN,
Minister of Municipal Affairs.

Parliament Buildings,
Toronto, April 9th, 1941.

ORGANIZATION
of the
ONTARIO MUNICIPAL BOARD OF THE
PROVINCE OF ONTARIO

R. S. COLTER, K.C. CHAIRMAN
W. P. NEAR, B.A. Sc. VICE-CHAIRMAN
ALAN VAN EVERY, B.A. MEMBER
M. B. SANDERSON ACTING-SECRETARY
J. A. McDONALD INSPECTOR OF TELEPHONE SERVICE

THIRTY-FIFTH ANNUAL REPORT

OF THE

Ontario Municipal Board

To December 31st, 1940

PRESENTED TO THE LEGISLATIVE ASSEMBLY

BY COMMAND

THIRTY-FIFTH ANNUAL REPORT

of the

Ontario Municipal Board

To December 31st, 1940

In pursuance of Section 108 of "The Ontario Municipal Board Act" (R.S.O., 1937, Chapter 60), the Ontario Municipal Board beg leave respectfully to submit their Thirty-fifth Annual Report.

"THE ONTARIO MUNICIPAL BOARD ACT"

Since the revision of the Statutes of Ontario in 1937, "The Ontario Municipal Board Act" was amended by Statutes of Ontario, 1938, Chapter 37, Section 18; 1939, Chapter 47, Section 26; and 1940, Chapter 20.

APPLICATIONS TO THE BOARD

There were 1173 applications to the Board during 1940 (exclusive of Public Vehicle and public Commercial Vehicle License applications), and in regard to 153 of these Public Hearings were held. The applications included a great variety of matters falling within the jurisdiction of the Board and those granted are set out in a list contained in the "Abstract and Summary" appended to this Report, indexed under "Orders issued by the Board." Copies of formal Decisions issued are also contained in the Abstract and Summary, indexed under "Decisions of the Board" and also under the names of the Parties.

SITTINGS OF THE BOARD

The Board held meetings for the transaction of routine business and the disposal of applications every juridical day throughout the year. Many of these applications, though dealt with informally and disposed of without the necessity of Hearings, entailed in many instances a considerable amount of inquiry and consideration on the part of the Board, especially those coming under the provisions of Section 70 of the Board's Act, which section requires all capital undertakings and expenditures therefor by Municipalities to be approved by the Board.

REVENUE

Ontario Statutes, 1939, Chapter 47, Section 26 (3), Section 107 of "The Ontario Municipal Board Act," being the section respecting the Board's fees, was repealed and re-enacted. The new section came into effect on the 27th day of April, 1939, and the fees are now payable in cash ON THE APPLICATION instead of in Law Stamps on the Board's Order.

During 1940 the Board's fees on applications amounted to \$16,169.71. In this amount is included fees on applications for Public Vehicle and Public Commercial Vehicle Licenses—\$3,430.76 collected by the Department of Highways and credited to the Board.

APPROVAL OF UNDERTAKING OF CAPITAL EXPENDITURES BY MUNICIPALITIES

(Section 70 of "The Ontario Municipal Board Act", R.S.O. 1937, C. 60)

On the 18th April, 1935, legislation came into effect whereby a Municipality is prohibited from exercising any of its powers to proceed with, authorize or provide any moneys for any undertaking, work, project, scheme, act, matter or thing, the cost or any portion of the cost of which it is intended or required to be provided or raised by the issue of debentures of the Municipality, until the approval of this Board is first obtained. This enactment over-rides the provisions of any general or Special Act and necessitates a great many applications to the Board. A list of these applications granted will be found in the Summary, included in the list indexed under "Orders issued by the Board." Written decisions will be found indexed under "Capital Expenditures" and also under the names of the Applicants.

Six hundred and sixty-eight applications in respect to proposed expenditures, totalling \$15,882,908.02 were considered by the Board and approval was refused in respect to approximately \$600,000.00 of this amount. It should be noted, however, that since Municipal representatives are now aware of the fact that they must obtain the Board's approval of proposed capital undertakings, a large percentage avail themselves of the opportunity of discussing their proposed borrowings with the Board and in many instances are advised that the Board would not be willing to grant approval. Accordingly formal applications in these instances are not filed and do not show in the Board's records.

It should also be noted that the existence of this legislation gives the Board an opportunity to advise and control with regard to the type and term of the debentures to be issued. In this connection the Board has pursued the policy of approving only instalment debentures as opposed to sinking fund debentures and is generally requiring the term of repayment to be shorter than formerly, believing that the saving of interest effected thereby accrues to the benefit of the municipal rate-payers.

A recital in the debenture by-law of the Board's approval under said Section 70 is now obligatory, pursuant to an amendment passed at the 1939 Session of the Legislature (Chapter 30, Section 17), adding paragraph (e) to subsection (1) of Section 305 of "The Municipal Act".

The following list, (generally speaking), shows the maximum debenture term allowed by the Board under this restrictive policy:—

Sidewalks	10 years
Curbs and gutters	10 years
Pavements	10 years
Watermains	15 years
Sanitary Sewers	15 years
Trunk Sewers	20 years
Buildings, including School	20 years

APPROVAL OF RATEPAYERS

By Section 59 (f) of "The Ontario Municipal Board Act" the Board is given power to direct that before any approval is given to the exercise of any powers by a Municipality or to any By-law passed by it, the assent of the electors thereof or of those qualified to vote on money by-laws shall first be obtained, notwithstanding such assent is not otherwise requisite. By virtue of this legislation the Board is continuing its policy, adopted in 1938, of insisting that major capital expenditures the cost of which would be met out of general rates, be submitted to the ratepayers for their approval before being presented to the Board, and further the Board is of the opinion that a representative vote can be taken only at the same time as the municipal election. The result of this policy in many instances has been the rejection of the proposed expenditure by the ratepayers.

ARBITRATIONS

In 1940 the Board acted as Arbitrators in connection with 6 applications, 3 of which were made pursuant to section 79 of "The Highway Improvement Act" for

the fixing of compensation to be paid to the Claimants for property expropriated in connection with construction of the King's Highways, where the amount could not be arranged between the Parties. Of the other applications one was made pursuant to "The Power Commission Act," one pursuant to Section 59 of "The Ontario Municipal Board Act" (as enacted by Section 1, Chapter 20, O.S. 1940) and one pursuant to "The Grand River Conservation Act, 1938."

RESTRICTED AREAS

Under Section 406 of "The Municipal Act" (R.S.O. 1937, C. 266) the Board considered 27 applications for approval of Municipal By-laws placing restrictions on certain areas as to use of land and the erection and use of buildings thereon; also, under subsection (2b) 49 applications for variation of restricted areas already established. The applications granted are shown in the Summary in the list of "Orders issued by the Board".

REFUNDING PLANS OF SUPERVISED MUNICIPALITIES

Pursuant to the provisions of section 32 of "The Department of Municipal Affairs Act" (R.S.O., 1937, C. 59), the Board during 1940 considered and approved plans for funding and refunding the bonded indebtedness of the following Supervised Municipalities: Township of Sandwich East, Township of Sandwich West and Town of La Salle.

EXTENSION OF PUBLIC UTILITIES

(Section 407 (2) of "The Municipal Act")

During 1940 the Board approved of extensions to Public Utilities in an amount totalling \$640,865.46, covering 21 applications. These are shown in the Summary in the list of "Orders issued by the Board".

FLOATING INDEBTEDNESS

(Section 59 (d) of Part IV, R.S.O., 1937, C. 60, as re-enacted by O.S., 1939, C. 47, S. 26 (1).

Under this legislation the Board issued Orders in respect to 12 Municipalities authorizing debenture issues totalling \$695,878.91. It should be noted that this meant a considerable saving of expense to the Municipalities concerned, as special Acts of the Legislature would otherwise have been necessary.

(Section 59 (dd) of Part IV, R.S.O., 1937, C. 60, enacted by O.S. 1939, C. 47, S. 26 (1)

11 Municipalities took advantage of this legislation, which came into effect on April 27th, 1939, and applied to the Board for authority without assent of the electors to retire certain of their debentures redeemable before maturity. The total amount authorized by the Board was \$1,505,212.77.

DIRECT RELIEF FUNDING

The policy of the Board to curtail, as far as possible, the funding of direct relief costs by Municipalities has resulted in only 1 application being filed with the Board during 1940 in respect to a portion of their expenditure in this regard, which application was granted. This represents an improvement over the three preceding years when, in 1937, 10 municipalities applied for and received approval to the funding of a portion of their direct relief costs, in 1938, 5 applications were filed of which only 3 were granted and in 1939 the 3 applications filed were approved.

The Board's hopes for the gradual termination of the practice by Municipalities of funding this type of expenditure are therefore justified.

ASSESSMENT APPEALS

There were 17 Assessment Appeals to the Board during 1940, pursuant to section 84 of "The Assessment Act" (R.S.O. 1937, C. 272), involving property assessed at \$2,564,193.09. Of this number 4 appeals were withdrawn, formal hearings were held in regard to 12 and 1 was held over for hearing in 1941. The total amount involved in the appeals heard by the Board was \$1,828,304.62.

Copies of the Board's written decisions will be found in the Summary, indexed under "Assessment Appeals", "Decisions of the Board" and also under the names of the Parties.

"THE MUNICIPAL FRANCHISES ACT"

(R.S.O. 1937, C. 277)

Under section 6 (c) of this Act the Board granted approval of a Municipal By-law granting to the London Street Railway Company a transportation franchise for one year for operation of a bus service within the limits of the City of London.

Pursuant to section 8, the Board heard two applications by Gas Companies for Certificates of Public Convenience and Necessity to construct works to supply and to supply gas to residents of certain Municipalities. Copies of these Certificates will be found in the Summary, indexed under "Certificates of Public Convenience and Necessity", "Decisions of the Board" and under the names of the Applicant Companies and the Municipalities concerned.

VALIDATION OF MUNICIPAL BY-LAWS AND DEBENTURES

(Section 64 of Part IV R.S.O. 1937, C. 60)

98 applications were made to the Board in 1940 for validation of Municipal By-laws and certification of the debentures authorized thereunder. The total of such debenture issues was \$4,216,453.02.

While purchasers of debentures are frequently satisfied with Orders of the Board under section 70 of the Board's Act, it has been found, particularly in regard to the larger issues, that a further Order of the Board validating the By-law and providing for certification of the debentures, facilitates the marketing of the issue.

PLANS OF LAND SUBDIVISIONS

Under "The Planning and Development Act" (R.S.O., 1937, C. 270, section 5 and 6), "The Land Titles Act" (R.S.O., 1937, c. 174, section 112) and "The Registry Act" (R.S.O., 1937, C. 170, Section 83 (15)), 40 plans were presented to the Board for approval and certification.

PROVINCIAL RAILWAYS

Extensions of and improvements to Provincial Railways during 1940, as reported to the Board will be found in the Summary, arranged alphabetically under the names of the several Systems reporting.

Annual Reports, to December 31st, 1940, by Railway Companies under the Board's jurisdiction were received, of which a summarized tabulation has been prepared for publication herein. The Board has no means of auditing these reports as received and cannot therefore guarantee that the figures taken therefrom are correct or accurate.

Under "The Railway Act" there were 13 applications to the Board in 1940.

Applications were received regarding the operation of buses in connection with the street railway systems of the Cities of Fort William, Kitchener and London.

A tabulation of Accident Reports received by the Board from Provincial Railways during the year 1940 is included in the Summary and shows that 20 persons were killed and 1,558 injured during the year.

PUBLIC VEHICLE AND COMMERCIAL LICENSES

Pursuant to "The Public Vehicle Act" (R.S.O. 1937, C. 289), and "The Commercial Vehicle Act" (R.S.O. 1937, C. 290), no Public Vehicle or Commercial Vehicle license, respectively, may be issued by the Department of Highways without the approval of the Board being first obtained as evidenced by a Certificate of Public Necessity and Convenience of the said Board furnished to that Department, and then only in accordance with such Certificate. Upon the granting of a Certificate by the Board the Department may then, in its discretion, issue or refuse a license.

The Board set aside 37 days during the year for hearing the applications for Certificates of Public Necessity and Convenience. In addition the Board has set aside each Friday morning to deal with the matter of transfers and other details brought before it by the Public Vehicle Division. The Board also during 1940 gave appointments for similar hearings at Port Arthur and Fort William, Kirkland Lake, Cornwall, Sudbury and North Bay.

During the year 44 applications were made for Public Vehicle Licenses and 819 for Commercial Vehicle Licenses. These include applications for extensions to and clarification of existing licenses, and the following is a classification of these and disposition made of same:—

	Class "A"	Class "B"	Class "C"	Class "D"	Class "E"	Class "F"	Class "H"	P.V.	Ttl
Applications Received	47	4	126	73	143	412	14	44	863
Applications Granted	28	4	78	57	112	337	6	29	651
Applications Dismissed	9	0	36	7	7	32	4	6	101
Applications Cancelled	0	0	7	4	20	34	0	1	66
Applications Withdrawn	3	0	2	1	4	9	3	4	26
Applications Reserved	7	0	3	4	0	0	1	4	19

In supporting an application before the Board the applicant may appear in person or be represented by his Solicitor, or, under exceptional circumstances, if unable to attend, may submit evidence in the form of letters, petition or affidavits. The Board hears and considers the evidence for and against and also takes into consideration the facilities extended by existing licensed operators and its decision is based on whether public necessity and convenience requires the service for which the application is made. During the past year the Board has required that sufficient evidence be filed with each application for a license or extension to a license to justify the application being listed for hearing. This has tended to shorten the list as well as to insure that applications are supported when listed for hearing.

All transfers of Public Vehicle and Public Commercial Vehicle licenses are subject to the approval of the Board and care is taken to prevent anything that might appear to be trafficking in licenses. Transfers of important licenses are usually made the subject of a Hearing and evidence is heard for and against.

The Department of Highways has referred to the Board during the year the applications of Class "D" operators for substitution or addition of contract shipers. Such applications are now made the subject of Hearings.

Through the co-operative efforts of the Department of Education and the Public Vehicle Division of the Department of Highways, an effort was made to have all motor vehicles carrying school children licensed under a school bus permit. These applications were dealt with by the Board and permits issued for which no fees were charged and the result has been that 110 School bus applications were received during the year. Of these 97 were granted, 8 cancelled, 3 discontinued, 1 is not operating and 1 has lapsed. The chief objective of this effort has been to require all such vehicles to carry insurance as provided by "The Public Vehicle Act."

FORMS

The Board has (for distribution to parties interested) the following forms and specifications, namely:—

1. The Board's Rules of Practice and Procedure and Practice Forms.
2. Regulations, Specifications and Forms respecting Railways.
3. Standard Specifications for Bridges, Viaducts, Trestles or other structures.
4. Memorandum of material required in support of application for approval of undertaking of capital expenditure involving debenture issue, under section 70 of "The Ontario Municipal Board Act" (R.S.O. 1937, C. 60).

5. Forms of By-laws and Notices which may be used when carrying out the provisions of sections 280 and 305 of "The Municipal Act" (R.S.O. 1937, C. 266) in respect of voting on Money By-laws.
6. Forms for Annual Reports by Railway Systems.
7. Forms for Reports as to Examination of Motormen.
8. Forms for Reports of Accidents by Railway Systems.
9. Directions for guidance of applicants under subsection (2) of section 407 of "The Municipal Act".
10. Tariff of the Board's Fees.
11. Forms under "The Planning and Development Act" with directions for guidance of applicants thereunder.
12. "The Telephone Act".
13. Form of Annual Report to be furnished to the subscribers to a Telephone System established under Part II of "The Telephone Act".
14. Instructions for preparation of Annual Report as mentioned in No. 15.
15. Pamphlet containing information regarding Provincial Telephone Systems and including:—
 - (a) Form of By-law providing for the establishment of a telephone system under Part II of "The Telephone Act".
 - (b) Form of By-law providing for the issue of debentures to pay for the cost of establishing a telephone system under Part II of "The Telephone Act".
 - (c) Form of By-law to regulate the management and operation of a telephone system established under Part II of "The Telephone Act".
 - (d) Form of Account for the use by Telephone Companies using the "Discount System of Collections."
 - (e) Form of Municipal Debenture—Instalment Plan.
 - (f) Form of Constitution and By-laws for a telephone company.
16. Form of Petition praying for the establishment or extension of a Telephone System under Part II of "The Telephone Act".
17. Form of By-laws granting to a telephone company the right to use the highways of a Township.
18. Form for Return by Municipality operating a telephone system.
19. Form for Return by Company, etc. operating a telephone system.
20. Form for Tariff of Tolls for telephone system.
21. Form for Return by Telephone Companies required by Order of the Board to set up a reserve for depreciation.

MISCELLANEOUS MATTERS UNDER THE BOARD'S JURISDICTION

Copies of the Board's written Decisions and a list of Orders issued in 1940 appear in the Summary. These relate to:

Arbitrations—Section 22 (7) of "The Power Commission Act" (R.S.O. 1937, C. 62); Section 59 of "The Ontario Municipal Board Act" (as enacted by Section 1, C. 20, O.S. 1940) and "The Grand River Conservation Act, 1938".

Assessment Appeals—Section 84 of "The Assessment Act," (R.S.O. 1937, C. 272).

Bridges, Relief from rebuilding of—Section 480 (9) and (10) of "The Municipal Act" (R.S.O. 1937, C. 266).

By-laws, approval of—Section 59 (c) of "The Ontario Municipal Board Act" (R.S.O. 1937, C. 60).

Detachment of Farm Lands from Town or Village—Section 21 of “The Municipal Act” (R.S.O. 1937, C. 266).

Erection of Police Village—Section 526 (3) of “The Municipal Act” (R.S.O. 1937, C. 266).

Extension of Municipal Utilities—Section 407 (2) of “The Municipal Act” (R.S.O. 1937, C. 266).

Extension of Time to pass Municipal By-laws—Section 297 (5) of “The Municipal Act” (R.S.O. 1937, C. 266).

Floating Indebtedness, authority to Municipalities to issue debentures for—Section 59 (d) of “The Ontario Municipal Board Act” (R.S.O. 1937, C. 60). (re-enacted by O.S. 1939, C. 47, S. 26).

Franchises—Approval of Municipal By-laws granting right to the laying of mains and pipes for supply of gas and Certificates of Public Convenience and Necessity in respect to the construction of works to supply and to supply gas to residents of Municipalities, pursuant to franchise therefor and also transportation franchise for one year for operation of a bus service in the City of London—Section 6 (c) and 8 of “The Municipal Franchises Act” (R.S.O. 1937, C. 277).

Highways, deferred widening of—Section 348 of “The Municipal Act”.

Highways, Department of, Claims against—Fixing of compensation—Section 79 of “The Highway Improvement Act” (R.S.O. 1937, C. 56).

Highways, Narrow—Approval of—Section 502 (2) of “The Municipal Act” (R.S.O. 1937, C. 266).

Increased Borrowings by Municipal Councils—Section 339 (2) of “The Municipal Act” (R.S.O. 1937, C. 266).

Interest Decrease and Interest Increase By-laws, Approval of—Section 310 of “The Municipal Act” (R.S.O. 1937, C. 266).

Legislation, Special—Approval of By-laws under.

License Fee, approval of fixing of to residents of a Municipality owning and using a bicycle on any highway therefor—Section 420 (11) of “The Municipal Act” (R.S.O. 1937, C. 266).

Local Improvements, approval of undertaking of and passing of a By-law therefor—Section 8 of “The Local Improvement Act” (R.S.O. 1937, C. 269).

Local Improvements, Abandonment of Part of Work—Section 18 of “The Local Improvement Act” (R.S.O. 1937, C. 269).

Local Improvements, Apportionment of cost of work—Section 27 (3) of “The Local Improvement Act” (R.S.O. 1937, C. 269).

Local Improvements, Approval of By-law providing for paving of Lane—Section 29 (3) of “The Local Improvement Act” (R.S.O. 1937, C. 269).

Parks, Approval of the setting aside part of for athletic purposes, etc.—“The Public Parks Act” (R.S.O. 1937, C. 285).

Schools—Amalgamation of School Sections—Appointment of Referee for—“The Public Schools Act” (R.S.O. 1937, C. 357).

Railways, Provincial, Orders respecting—“The Railway Act”.

Restricted Areas, approval of By-laws for establishment of—Section 406 of “The Municipal Act” (R.S.O. 1937, C. 266).

Restricted Areas, Repeal of, or amendments to, approval of By-laws for—Section 406 (2b) of “The Municipal Act” (R.S.O. 1937, C. 266).

Retirement of unmatured debentures—Section 59 (dd) of “The Ontario Municipal Board Act” (as enacted by O.S. 1939, C. 47, Section 26 (1)).

Sewage disposal works, approval of—Section 101 (11) of “The Public Health Act” (R.S.O. 1937, C. 299).

Sinking Funds, use of surplus—Section 321 (a) of “The Municipal Act” (R.S.O. 1937, C. 266) (as enacted by O.S. 1939, C. 30, Section 18).

Sinking Funds, authority to dispense with further levy for, where amount in Sinking Fund sufficient—Section 321 (b) of “The Municipal Act” (R.S.O. 1937, C. 266) (as enacted by O.S. 1939, C. 30, Section 18).

Sinking Funds, redemption of Debentures with,—Section 327 of “The Municipal Act” (R.S.O. 1937, C. 266).

Sterling, issue of debentures in—Section 306 (3) of “The Municipal Act” (R.S.O. 1937, C. 266).

Supervised Municipalities, Appeals to Board—“The Department of Municipal Affairs Act” (R.S.O. 1937, C. 59 (Part III)).

Supervised Municipalities, Approval of Refunding Plans—“The Department of Municipal Affairs Act” (Part III).

Supervised Municipalities, Supervision by the Department of Municipal Affairs—“The Municipal Affairs Act” (R.S.O. 1937, C. 59) (Part III).

Supervised Municipalities, Variation in Local Improvement Rates—“The Department of Municipal Affairs Act” (R.S.O. 1937, C. 59) (Part III).

Tax Rate, Approval of further debt and levy therefor—Section 315 (2) of “The Municipal Act” (R.S.O. 1937, C. 266).

Tariff of Board's fees—Section 107 of “The Ontario Municipal Board Act” (R.S.O. 1937, C. 60). (re-enacted by O.S. 1939, C. 47, Section 26 (3)).

Unemployment Relief, approval of works under—(Section 7, “The Unemployment Relief Act, 1935” (C. 71)).

Unemployment (Direct) Relief, Funding of cost—“The Unemployment Relief Act, 1935” (C. 71).

Validation of debenture By-laws—Section 64 (Part IV) of “The Ontario Municipal Board Act” (R.S.O. 1937, C. 60).

Vote of Electors, applications to dispense with—Section 69 of “The Ontario Municipal Board Act” (R.S.O. 1937, C. 60).

Works ordered by Dominion Railway Board—Section 307 (3) (f) of “The Municipal Act” (R.S.O. 1937, C. 266).

M. B. SANDERSON,

Acting Secretary.

THE ONTARIO MUNICIPAL BOARD

REPORT OF THE INSPECTOR OF TELEPHONE SERVICE

For the Year 1940

The following applications under the provisions of "The Telephone Act" (R.S.O. 1937, Chapter 261) were dealt with by the Board in 1940:

Under Section 31:	For the approval of the purchase of an existing telephone system by a municipality or any portion thereof	3
Under Section 51:	For an order approving appointment of Commissioner to fill vacancy	3
Under Section 56:	For the approval of by-laws of a municipal telephone system	2
Under Section 58:	For an order prescribing the date for holding the annual meeting of subscribers	1
Under Section 79:	For the approval of municipal by-laws granting the right to erect poles and wires upon the highways	1
Under Section 87:	For the approval of by-laws of a telephone company	10
Under Section 96:	For the approval of agreements providing for interchange of service	27
Under Section 101:	For the approval of the sale of telephone systems	5
Under Section 103:	For the approval of charges for telephone service	42
Under Section 108:	For an order re maintenance of reserve for depreciation	5
Under Section 109:	For authority to expend a portion of the moneys set aside for depreciation, upon new construction or extensions or in the purchase of securities	8
	Total Number of Applications	107

The continued policy of the Board in endeavouring to secure an amicable settlement of matters in dispute between the applicant and respondent has proved successful in the majority of cases.

In addition to the applications and complaints referred to, a vast amount of correspondence relating to telephone matters has been dealt with by the Board's Telephone Department, through the medium of which much information and assistance has been given to municipalities, companies and other persons interested, and many difficulties which might otherwise have necessitated a formal application and public hearing have been satisfactorily adjusted.

During the year the following changes were made in the Board's records of Telephone Systems coming within its jurisdiction:

The Plant and Assets of The Scarborough Telephone Company Limited operating about 390 telephones and the Grunwald Telephone Line and the Fairypoint Telephone Line operating 12 and 33 telephones respectively were sold to The Bell Telephone Company of Canada.

The number of telephone systems within the jurisdiction of Ontario of which the Board has record is 572 operating 117,687 telephones, 31,934 miles of pole lead carrying 199,478 miles of wire and representing an investment of over \$11,500,000.

There are eleven systems owned and operated by municipalities under the provisions of Part I of "The Telephone Act", viz.: the Cities of Fort William and Port Arthur, the Towns of Cochrane, Dryden, Fort Frances, Kenora, Keewatin and Rainy River, and the Townships of Alberton, Caledon and Hilliard.

One hundred and twenty-one systems are now established and operating under Part II of "The Telephone Act" and furnishing service in two hundred and seventy-seven towns, villages and townships.

There are sixty-seven systems owned and operated by individuals or partnerships of less than five persons, three hundred and fifty-six by Incorporated Telephone Companies, ten by Incorporated Companies other than Telephone Companies, and seven by Federal or Provincial Government Departments and Commissions.

In addition to the before mentioned systems, the Forestry Branch of the Department of Lands and Forests is operating an extensive system in connection with its work of fire prevention. This system comprises 760 telephone stations, 1,781 miles of pole lead, 1,181 miles of tree line, and 5,601 miles of wire, the total investment being \$326,872.21.

Detailed statistics and other information relative to these systems will be found in the appendix to this report, entitled: "Telephone Systems, 1940."

JAS. A. McDONALD,
INSPECTOR OF TELEPHONE SERVICE.

ABSTRACT AND SUMMARY

DECISIONS OF THE BOARD

ARBITRATIONS

P.F. A-9495

IN THE MATTER of Section 79 of "The Highway Improvement Act" (R.S.O. 1937, Chapter 56) and

IN THE MATTER of the application of the Department of Highways for the fixing by the Ontario Municipal Board of compensation to be paid to Mrs. Matilda M. Clow in respect to certain of her lands expropriated by the said Department and being Lots 9 and 10, Broken Front Concession, Yonge Township in the County of Leeds.

BETWEEN:

MRS. MATILDA M. CLOW,

Applicant,

—and—

THE DEPARTMENT OF HIGHWAYS,

Respondent.

L. V. Fitzpatrick, Esq., K.C.

For the Applicant,

R. J. Driver, Esq., K.C.

For Tenant, Margaret McMillan

H. J. Sims, Esq., K.C.

For the Respondent.

JUDGMENT

This is an application on behalf of the Claimant for the determination of the amount of damages to be paid to her by the Department of Highways for land expropriated by the Department for Highway purposes.

The Claimant is a married woman and is the residuary legatee under the will of her father, William McMillan, and her mother, Margaret McMillan, has a life estate in the west half of Lot 9 and the East quarter of Lot 10, Broken Front Concession, Yonge Township, County of Leeds.

The farm is situated along the St. Lawrence River. The Claimant says it contains about 125 acres. The plan shows 93½ acres. The farm house and small barn are built near the St. Lawrence River, and are surrounded by a garden plot, some small fruit bushes and some fruit trees. On a small point jutting into the River are two cottages owned by residents of Brockville who each pay \$15.00 per year rent for the land on which the cottages are built. The balance of the river frontage is not suitable for summer cottages.

Most of the farm is covered with water or is low lying. Besides the garden plot there are 7 to 9 acres of workable land. There are two wood lots one of which can be approached only by boat. The farm and farm buildings are reached by a Township road, a winding road unimproved through a bush. The distance by the road from the buildings to the main road is about four miles. The road is almost unpassable in winter. Rocks are jutting up in portions of the road which make it dangerous for automobiles. The house is not occupied in the winter, the residuary legatee being a married woman resides with her husband on his farm and the mother occupies the house during the summer. The mother sometimes rents part of the house by the day or week to tourists.

The farm was purchased by the late William McMillan in 1897 for \$1100.00. He erected a barn. The property is assessed at \$850.00.

Geo. A. Clow, the husband of the Claimant says that he worked the farm. He uses the land north of the highway about 40 acres (except 9 acres) for pasture. In addition there are 9 acres of workable land and about 50 acres of bush land. He values the land north of the new highway at \$2500.00 for pasture. He values the land (about 12 or 14 acres) south of the highway at \$6000.00; \$3000.00 for the house and barn and \$3000.00 for the river front. He refers to the sale of a small farm to the Sifton Estate, about 15 acres with a small house for \$15,000.00.

On cross examination he valued the tillable land at \$75.00 per acre, and the river frontage, 1300 ft. at \$3.00 per foot.

Geo. Clow, the father of Geo. A. Clow, figures there would be 3000 cords of stove wood on the land, and the land, after removal of woods, would be worth \$1000.00. He placed a value of \$4000.00 on the land north of the new highway and \$6000.00 on the land south of the highway for lots 800' frontage at \$6.00 per foot. In cross-examination he said he was not a valuator, but that he had 80 acres on No. 2 Highway which is assessed at \$3000.00.

D. R. Davis, an Insurance and Real Estate Agent in Brockville, claimed also to be an appraiser, but in cross examination admitted that his appraising was as to damage by fire. He placed a value of \$4000.00 on the land north of the highway after being told as to the lumber. He said that on the river front there were two good points, that it was not now ready for subdivision but had a potential value of \$2500.00. Total valuation \$6500.00. In cross examination he admitted that his knowledge of valuation of river frontage west of Brockville was not so good as East of Brockville where river frontage would sell at \$10.00 per foot. He said there were large boulders in front of the East point and it would be necessary to remove these.

J. A. McDonald, a farmer, valued land with bush north of Highway at \$33.00 per acre, the house at \$2,000.00, barn \$275.00 and shed at \$50.00.

Benjamin Ferguson, a farmer, valued land north of highway with the timber at \$35.00 per acre and the buildings the same as Mr. McDonald.

Walter Fulford, a farmer, 4 miles west of Brockville, has developed some river frontage and has made sales at \$10.00 per foot. He says that Clow's frontage compares with his but is 6 or 7 miles West. He valued the land south of the highway at \$6000.00. He said his access to highway was good and about 60 rods away.

For the Defence:

Jean A. Lewin, the deputy Registrar of the Surrogate Court produced the papers filed on application for Probate of the Will of William McMillan, wherein the Executor, Margaret McMillan, the widow, and Archibald Elliott swore that the value of this farm was at that time (February 1907) \$1100.00.

Joseph Elwood, a Real Estate Agent of South Falls, examined this farm. He figured there would be 25 acres in both wood lots and that there would not be sufficient lumber on it to interest a lumber man. He enumerated different farms he was offering for sale. He said the farms today were worth about 50% of what they would sell for 20 years ago. He valued the farm at \$1500.00.

Walter Gardiner, an appraiser for the Commissioner of Agricultural Loans, has known the property for 20 years. He placed the value at \$1800.00.

Victor Purvis, Reeve of Young Township, valued the farm at \$2000.00 and something additional for river frontage. He pointed out that the assessment was \$850.00; that formerly assessments were two-thirds of value but that the percentage has been lowered on farms farther back from the road.

Norman Richardson, Chief Property Valuator for the Department of Highways said that he took the whole farm because the north part was of little value and there were no building on it. He valued the farm at \$2000.00 which included the river frontage.

He pointed out that the Sifton purchase was for 100 acres and the price paid was \$3500.00. It was a purchase to add to the location of the property then held by the Sifton Estate.

He admitted he had offered \$2700.00 for the property in order to avoid litigation.

At the request of the parties the Board inspected the property. The only land suitable for summer cottages is now occupied by the two cottages mentioned in the evidence. The balance of the frontage is rocky and not protected by trees. The house has been recently painted and is in a fair state of repair, but the furnace is useless. The barn is in poor repair and is not suitable for cattle. The other buildings are of little value. The balance of the land is of little or no value as a farm. Much of it is covered with water and bush, and the balance is low. Only between 7 and 9 acres is workable. No farmer will pay much for a farm on which there is only 7 to 9 acres of tillable land, even if the balance could be used for pasture. The farm is poorly situated and the road leading to it is extremely poor.

If Geo. A. Clow was honest in his statement of values—50 acres bush \$3000.00, land north of the highway for pasture \$2500.00, land south of highway \$6000.00, buildings \$3000.00, he must have been greatly influenced by his statement that the Sifton property (15 acres and a small house) was sold for \$15,000.00. His statement was wrong. There were 97 acres instead of 15 acres, and the purchase price was \$3500.00 not \$15,000.00 and the purchase was by the Sifton Estate to add to their then holdings.

The Board cannot accept the evidence of Geo. A. Clow or his witnesses, as to value. The Board cannot believe Mrs. Clow when she says that she was offered \$8000.00 for the property south of the highway by an American whom she never saw before or since. The evidence of these witnesses is most unreasonable.

The Department has agreed to take over the leases of the two cottages and to allow Mrs. McMillan the use of the house, garden and fruit trees and bushes during her life.

The Board is unable to find that this property is worth \$2700.00 the amount offered by Richardson, and the offer must have been made to avoid litigation as he says. The Board finds that a fair value of the said lands is \$2000.00, in addition to the use hereinbefore mentioned reserved to Mrs. McMillan. There will be no damages allowed for forcible taking.

There will be no costs to either party and Order will be issued accordingly, the Board's fee of \$40.00 on the application to be paid by the Department of Highways.

DATED at Toronto, this 15th day of August, A.D. 1940.

IN THE MATTER of Section 76 of "The Highway Improvement Act" (R.S.O. 1937, Chapter 56), and

IN THE MATTER of the expropriation by the Department of Highways of the Province of Ontario of certain lands owned by Mabel Milligan and being part of Lot 1, Concession 1, Township of North Grimsby, County of Lincoln, and

IN THE MATTER of the determination of the proportion of the fixed amount of compensation as between the said owner and R. Murgatroyd and Sons, Mortgagees.

F. R. Murgatroyd, Esq. _____ for the Mortgagees, F. Murgatroyd and Sons
 H. C. Moore, Esq. _____ For the Department of Highways

JUDGMENT

THIS IS A CLAIM for compensation for the expropriation of 2.858 acres of land being all of the southerly portion of Lot Number 1, Concession 1, in the Township of North Grimsby in the County of Lincoln, an orchard farm in the Niagara Peninsula, by the Department of Highways for highways purposes.

On the 5th day of June, 1937, Highway Plan No. 134 comprising an area of 1.174 acres was registered. On the 19th day of September, 1938, Highway Plan No. 172 comprising an area of .121 acres was registered. On the 16th day of May, 1939, Highway Plan No. 193 comprising an area of .020 acres was registered. On the 25th day of November, 1939, Highway Plan No. 210 comprising an area of 1.543 acres was registered. The total area of the various takings is 2.858 acres and is the southerly portion of the farm belonging to Mabel Milligan on which R. Murgatroyd and Sons hold a mortgage for \$2,000.00 at the times of expropriation. On the 17th day of February, 1924, one William Hunter who was the owner of 14 acres of land more or less gave a mortgage to Robert C. Murgatroyd and Ellis W. Murgatroyd doing business under the name and style of R. Murgatroyd and Sons for the sum of \$3,500.00 with interest at 7 per cent. On the 18th day of March, 1927, William Hunter sold to Mabel Milligan 9 acres more or less of the said lands and the said Mabel Milligan assumed payment of \$2250.00 of the said mortgage which was chargeable against the said 9 acres. The mortgagees discharged 4.792 acres of the said 14 acres for the sum of \$1250.00 or at the rate of about \$250.00 per acre.

The Department of Highways agreed with Mabel Milligan to pay the sum of \$1600.00 as full compensation for the taking of the said lands and all damages suffered by her and paid to the said Mabel Milligan the sum of \$1000.00 on account. No Notice of Expropriation was given to the Mortgagee.

R. Murgatroyd and Sons gave notice to the Department of Highways of their mortgage and the Department of Highways suggested that they should pay to the said R. Murgatroyd and Sons the sum of \$600.00 as compensation for the damages to them resulting from the exercise of the power to expropriate. R. Murgatroyd and Sons claimed that \$600.00 was not sufficient compensation for the damages suffered by them and claimed that they were entitled to payment to them of the full sum of \$1600.00 which sum they agreed was sufficient to cover the damages suffered by them.

The Public Works Act (R.S.O. 1937, Chapter 54, Section 21), provides:

"The Minister shall make to the owner of land entered upon, taken or used by him or injuriously affected by the exercise of any powers conferred by this Act due compensation for any damages necessarily resulting from the exercise of such powers, beyond any advantage which the owner may derive from the contemplated work, and any claim for such compensation not mutu-

ally agreed upon, shall be determined as hereinafter provided."

In the Interpretation section of this act, Section 1 (g) provides:

"'Owner' shall include a mortgagee, lessee, tenant, occupant, person entitled to a limited estate or interest, and a guardian, executor, administrator or trustee in whom land or any interest therein is vested."

R. Murgatroyd and Sons, the mortgagees, claim that they were entitled to be paid the full sum of \$1600.00. The Board must decide what sum of money the Minister should pay to R. Murgatroyd and Sons for compensation for damages to R. Murgatroyd and Sons resulting from the exercise of the powers beyond any advantage which the owner may derive from the contemplated work.

No evidence as to values or damages was given by the Murgatroyds, they claiming that they were entitled to be paid the full sum of \$1600.00 agreed upon. For the Department of Highways, Joseph J. Smith, one of the valuers for the Department since 1937, and a man who has had a vast experience in purchasing, owning and valuing orchard land in the Niagara Peninsula, said that the land was level and fairly good except in the south west corner containing about 1.27 acres which was a ravine through which a creek ran, the banks of which were a poor soil showing shale. The balance of the land taken comprising 1.58 acres, is much better land and would be as good as the land on the rest of the 9 acres. In his opinion the 1.27 acres in the ravine would not be worth more than \$100.00 per acre but the land west of the ravine would be worth from \$275.00 to \$300.00 per acre. He says that the building of the highway has increased the value of the land and that practically all of the poor land of the farm has been expropriated. He says that in his opinion the farm would sell for as much today as it would have sold for prior to taking the 2.858 acres. In cross-examination he referred to the fact that the buildings on this farm were approached, prior to the construction of the highway, by a narrow road which crosses the railway tracks going south. He said that at first he valued the land taken at \$450.00 but by reason of the taking and other damages, he made an offer of \$800.00 to Mrs. Milligan, the owner. He says that the offer was later increased to \$1600.00 in order to prevent a lawsuit.

Mrs. Milligan said that she had received \$1000.00 and that in her opinion the \$1000.00 paid was for the damages for loss of crops, and for trees which were taken out and of which they lost the use. She says that they got no revenue from the farm for two years by reason of the work that was being done by the Highways Department.

In determining the amount of compensation, the law is well settled that the value to the claimant of the total farm before taking should be taken, and that its value after the part is taken shall be ascertained and that the owner should be paid the difference between the two sums: *Re Ontario and Quebec Railway and Taylor* (1884) 6 O.R. 338; *James vs. Ontario and Quebec Railway* (1886) 12 O.R. 624, 15 O.A.R. 1; *Re Hannah and Campbellford E. Ry. Co.*, (1915) 34 O.L.R. 615. The Board finds that in June, 1937, before the taking, the farm was worth the sum of \$3610.00 and the value of the farm after the taking to have been the sum of \$2910.00, the latter sum including the amount by which the value of the farm has been increased by reason of the construction of the new highway. In the opinion of the Board, the proximity of the right of access to this new highway constituted an advantage which the owner will derive from the contemplated work within the meaning of Section 21 of The Public Works Act: *Re Toronto and Hamilton Highway Commission and Crabb* (1916) 37 O.L.R. 656, 663. Deducting the latter sum from the former leaves the sum of \$700.00 as representing the total value of the lands expropriated and the injury caused to the remainder of the farm by the expropriation. Interest at 5 per cent. should be allowed on \$287.54 from the 5th day of June, 1937, on \$29.64 from the 19th day of September, 1937, on \$4.90 from the 16th day of May, 1939, and on \$377.92 from the 25th day of November, 1939.

Section 32 of The Public Works Act provides:

"The compensation agreed upon or adjudged for any land or property acquired, taken, or used in or injuriously affected by the exercise of any of the powers conferred by this Act shall stand in the stead of such land or property, and any claim to or encumbrance thereon shall, as respects the Crown, be converted into a claim to or upon such compensation, and shall no longer affect such land or property so acquired, taken or used."

In the case of *Bigelow v. Austin* (1922) 23 O.W.N. 230, Middleton J., as he then was, said at p. 230:

"Plainly the proceeds of the expropriation of lands belong in the first place to the mortgagee. The question whether his security is ample or scant is quite irrelevant. To the extent that the mortgage-debt is reduced, the creditors benefit. The mortgagee's claim is incontestable."

The Board finds that R. Murgatroyd and Sons are entitled to the sum of \$700 with interest

On 1.174 acres from June 5th, 1937, on \$287.54	\$48.61
On .121 acres from Sept. 19th, 1937 on \$29.64	4.58
On .020 acres from 16th May, 1939, on \$4.90	.35
On 1.543 acres from Nov. 25th, 1939 on \$377.92	17.19

and that on payment of the said sums to R. Murgatroyd and Sons, they shall release the said expropriated lands from their mortgage and that their mortgage shall be reduced by the sum of \$700.

R. Murgatroyd and Sons claimed \$1600.00. The Department of Highways verbally offered \$600.00. The damages found are \$700.00 and Interest. Under the circumstances there should be no order as to costs, except the Board's fee of \$15.00 which the Board orders to be paid by the Department. The said fee having been paid by R. Murgatroyd and Sons, it is ordered that the Department shall reimburse them.

IN THE MATTER of Section 79 of "The Highway Improvement Act"
(R.S.O. 1937, Chapter 56) and

IN THE MATTER of the Application of the Department of Highways
for fixing by the Board of compensation to be paid to Howard L. Trick-
ey in respect to certain of his lands expropriated by the said Depart-
ment and being Lots 17, 18 and 19, Broken Front Concession, Township
of Yonge, County of Leeds.

BETWEEN:

HOWARD L. TRICKEY, ESQ.,

Applicant,

—and—

DEPARTMENT OF HIGHWAYS,

Respondent.

L. V. Fitzpatrick, Esq., K.C.

For the Applicant

H. J. Sims, Esq., K.C.

For the Respondent

JUDGMENT

The Department of Highways expropriated 12.1 acres for right of way purposes and 8.66 acres south of the Highway, being a part of the farm of the Plaintiff in Lots 17, 18, 19, Broken Front Concession in the Township of Yonge in the County of Leeds. The lands expropriated are the St. Lawrence River frontage of the Claimant's farm.

The Claim was heard by the Board at Brockville on the 10th day of July, A.D. 1940.

The Claim as filed is as follows:

1. Right of way \$100.00 for 12.1 acres	\$1210.00
2. Lands south of right of way 6.66 acres. All this land is marsh land for which he claims \$100.00	660.00
3. 2 acres of this property is suitable for cottage property and he claims for this \$600.00	1200.00
4. Deprived from use of River for watering cattle	1000.00
5. Building a road from his house to new highway	500.00
6. Damage on account of house not facing highway	300.00
7. Damage for ditching	150.00
8. Loss of 1938 crop	100.00
	<hr/>
	\$4,120.00

H. L. Trickey, the Claimant, states that the farm was a good dairy farm comprising 260 acres, all fronting on the River. His house and barns faced the Township Road, along which the mail was delivered and milk and cream collected, that since the new highway is constructed the Township road will not be used, his house is facing from the new road; and mail is delivered on the new road and milk and cream are collected from the new highway; and he will be compelled to build a new road from his house to the new highway, for all of which he claims damages.

He also claims that before the new highway was constructed he kept sixty cattle but since he has kept only forty-five to fifty. He did not give any reason for this. He also said that when it is wet he cannot get to the new road and must use the old road. He claimed that part of the land taken was choice work land and he sometimes put in crops on part of it. Other years he used it in the Spring and Fall for pasture and sometimes he harvested the mash hay. He has a creek running past his barn.

With reference to Claims 1, 2 and 3 the Claimant asks \$100.00 per acre for the land taken, about twenty acres (2 acres of which he claims to be more valuable than the rest by reason of the fact that it might be used for cottage purposes. He admitted that it is low marshy land except a very small portion, that he used it for pasture in the Spring and Fall, and sometimes tilled a part of it. The Coutoux plan Exhibit 3 filed by the Department shows that in the right of way there is 6.91 acres which is called high ground (above water level on June 27th, 1940) and 5.10 acres of marsh (below water level June 27th, 1940). South of the right of way there is 2.56 acres of high ground and 6.10 acres of marsh. For 18 acres of this he claims \$100.00 per acre. Such a price is most unreasonable for land and marsh of this character.

With reference to the two acres claimed as being suitable for cottage purposes—the easterly point, referred to by the Claimant as being rather low, is shown on Exhibit 3 as "Marsh: Crop of Marsh Hay." The westerly point, two portions of which are shown as 'Marsh' and the balance as 'Crop of Marsh hay' is shown as being 248, or about 3 feet higher than water level 244.96. Neither point has ever been used for cottage purposes and the Board doubts that it will ever be so used under any circumstance. The Board finds that the lands taken are of little value as farm land; that its only value is as pasture land and for the harvesting of marsh hay. As pasture it would be of some value in the Spring, and for marsh hay it would be of some value if the crop is harvested early and before it gets rank. Its use during and after the summer would be of little or no value either as pasture or for hay. The land expropriated is only a small portion of his marsh lands, his whole frontage on the river and for some distance back, being marshy low lying land, some covered with rushes and the balance with what he calls marsh hay. A fair value for this land would be \$20.00 per acre.

With reference to Claim No. 5—the ingress and egress to and from his farm have not been interfered with, and no actionable damage has been sustained by reason of this.

Claim No. 6. This is not a matter for which damages can be recovered.

Claim No. 7. Damage for ditching. At some points north of the highway fence the Department has sloped the Claimant's land toward the ditch. The damage for this is almost negligible.

Claim No. 8. Loss of 1938 crop. No evidence was tendered to show when this land was expropriated but the Claimant in his evidence said that on the 13th of July, 1938, he was approached by the Department with an offer. The 'crop' would be a crop of marsh hay. Damage, if any, on this claim would be small.

With reference to Claim No. 4—damage from loss of use of river for watering cattle. This claim has given the Board some trouble. One thousand dollars is claimed for this. Cattle were pastured on this frontage during the Spring and Fall, leading to the conclusion that it was of value as pasturage during the rainy or wet seasons. The land north of the new highway is little if any higher than the land expropriated and some of it is not so high as the River high water mark. A creek runs through the Claimant's land and he has other sources of water supply. But even so there is no doubt that there is some damage to the defendant by being cut off from the River and in the opinion of the Board the Claimant should be allowed \$300.00 on this claim.

The Board, therefore, finds that the damage suffered by the Claimant is as follows:

Claim Nos. 1, 2 and 3.—Damage for land expropriated 20.67 acres at \$20.00 per acre	\$ 413.40
Claim No. 4—Loss by reason of separation from river	300.00
Claim No. 5	Nil
Claim No. 6	Nil
Claim No. 7—Ditching	10.00
Claim No. 8—Loss of Crop, 1938	20.00
	\$ 743.40
The Claimant shall also be allowed 10% for forcible taking	74.34
A TOTAL OF	\$ 817.74

Judgment for \$817.74 damages—there will be no costs.

The Board's fee of \$35.00 on the application is to be paid by the Department of Highways.

DATED at Toronto, this 15th day of August, 1940.

ROCKCLIFFE PARK,

Applicants,

—and—

THE CORPORATION OF THE CITY OF OTTAWA

Respondent.

F. B. Proctor, K.C., and
G. C. Medcalf For the Respondent
J. H. Thomson, Esq. For the Applicants
Alan VanEvery, Esq. For the Department of Municipal Affairs

JUDGMENT

THIS IS A MOTION on behalf of the Respondent, to set aside the proceedings launched by the Applicants.

By Chapter 20 of the Statutes of Ontario, 1940, The Ontario Municipal Board Act was amended by adding thereto the following clause:

- (ii) hear and determine the application of any municipality to confirm, vary or fix the rates charged or to be charged in connection with water supplied thereto by any other municipality.

Four applications were made by the Applicants under the Legislation to the Board to fix the rates to be charged to the said four municipalities by the City of Ottawa, and this is a motion by the City of Ottawa for an Order declaring that the legislation did not apply to the Respondent. The motion was heard by the Board at the Board's Chambers at the City of Toronto on the 29th day of May, A.D. 1940.

Counsel for the Respondent argued:

- 1. That the legislation was one sided legislation by reason of the fact that only the municipalities to which water was supplied had the right to launch an application, and

2. That the legislation permitted municipalities to which water was being supplied by another municipality to treat agreements as scraps of paper and
3. That the legislation did not apply to the City of Ottawa by reason of the fact that the City of Ottawa had special legislation with reference to its water works.

With reference to the first and second of these contentions, these are matters with which the Board, on this motion, has no right to deal. In connection with the third contention, the City of Ottawa Waterworks Act, 35 Victoria, Chapter 80, was a special act passed in the year 1872 under which a water commission was established in the City of Ottawa for supplying water to the City of Ottawa for the use of its inhabitants. Amongst other things the act provides:

2. It shall be the duty of the said commissioners to examine, consider and decide upon all matters relative to supplying the said City of Ottawa with a sufficient quantity of pure and wholesome water for the use of its inhabitants, and also to build and construct necessary water works, buildings, machinery, and other appliances requisite for the said object.
10. The board of commissioners for the time being shall regulate the distribution and use of the water in all places and for all purposes where the same may be required, and from time to time shall fix the prices for the use thereof and the times of payment; and they may erect such number of public hydrants and in such places as they shall see fit; and direct in what manner and for what purpose the same shall be used, all which they may change at their discretion; Provided always, that all hydrants, conduits, or other appliances required and furnished for the purpose of extinguishment of fires shall be placed as the corporation of the City of Ottawa shall direct, and shall be under their exclusive control and discretion when erected.
11. The commissioners shall have power and authority and it shall be their duty from time to time, to fix the price, rate or rent (such price, rate or rent not being less, after the completion of the water works, than sufficient to pay the interest and sinking fund upon the debentures issued for the construction of water works, and the expenses of maintaining and working the same), which any owner or occupant of any house, tenement, lot, or part of a lot, or both, in, through, or past which the water pipes shall run, shall pay as water rate or rent, whether such owner or occupant shall use the water or not, having due regard to the assessment and to any special benefit and advantage derived by such owner and occupant, or conferred upon him or her or their property by the water works, and the locality in which the same is situated and such water rate or rent as shall be assessed by such commissioners upon such owner or occupant, shall be and continue a lien and charge, unless paid, upon such real estate; and the water commissioners shall also have power and authority, from time to time to fix the rate or rent to be paid for the use of the water by hydrants, fire-plugs and public buildings.
12. That each vacant lot of land in the City of Ottawa, fronting on the streets under which the water pipes shall be placed shall, provided the pipes run past the said lot, be rated and taxed by the said commissioners due regard being had to the assessment and to the advantage which the said lot shall derive from water works.
13. The commissioners shall have full power from time to time to make and enforce all necessary by-laws, rules and regulations for the collection of the said water-rent and water-rate and for fixing the time and times (which shall be quarterly) when, and the places where, the same shall be payable; and the said water-rents and water-rates when collected shall be paid over to the chamberlain of the City of Ottawa, and by him placed to the credit of the water account:—
27. The water commissioners shall have power and authority to supply any corporation, person or persons with water although not resident within the City of Ottawa and may exercise all other powers necessary to the carrying out of their agreements with such persons as well within the townships of Nepean, Gloucester and the incorporated Village of New Edinburgh as within the City of Ottawa; and they may also from time to time make and carry out any agreement which they may deem expedient for the supply of water to any railway company or manufactory; provided

that no power or authority shall be exercised under this clause without the consent and approbation of the corporation of the City of Ottawa.

With particular reference to Section 27, the meaning of the word "corporation" was fully argued by Counsel on behalf of all parties, and it was contended by all counsel that corporation did not mean a municipal corporation but referred particularly to a "company." There is no interpretation of the word "corporation" in the act. Mr. Proctor for the City of Ottawa argued further that there was no power in the Municipality of Ottawa under the special act or under other acts, to supply water to outside municipalities.

The Public Utilities Act and Suburban Area Development Act were both referred to and it was contended that neither of these acts would empower the Board of Control of the City of Ottawa or the City of Ottawa to supply water to the applicants.

The City of Ottawa Act of 1872 provided that a Water Works Commissioner should have control of the water works of the City. In 1879 by a special act, the control of the water works system was changed from the water commissioners to the Corporation. By a special act in 1913 the control of the water works was put under a water commission which was elected. In 1916 by a further special act the control and management of the water works system of Ottawa was changed to the Board of Control of the City of Ottawa, and the water works system is today managed and controlled by the Board of Control of the City of Ottawa.

In the year 1936 By-law No. 8267 of the City of Ottawa was passed. This was a by-law respecting water works and by Section 2 of the said By-law the control management and maintenance of the water works is hereby vested in the Board of Control of the Corporation, which shall attend to and discharge, (subject to approval and directions of the Council of the Corporation), all the duties required by an Act passed in the thirty-fifth year of the reign of Her Late Majesty Queen Victoria, chaptered 80, and entitled an Act for the Construction of Water Works for the City of Ottawa, or under any Act or Acts passed in amendment or in substitution therefor, in whole or in part, to be attended to or discharged by the Water Commissioner or by the Water Works Committee in the said Acts mentioned.

Clause 3 of the said By-law provided that the water works of the Corporation and the operation thereof shall be supervised and administered by an engineer, who shall, under the direction and control of the Board of Control, perform the following duties—and his duties are named.

By clause 7 of the said by-law the water rates are fixed. Clause 46 of the by-law deals with non-resident rate agreements and provides that no person shall be permitted a supply of water for use in any building outside of the City of Ottawa unless he has obtained permission therefor **by resolution of the city council adopting a report from the Board of Control recommending his application, nor until the applicant shall have executed an agreement according to the form set out in Schedule "A" thereto.** Clause 56 of the By-law provides that the rates for water supplied to residents of an adjoining municipality **shall be approved by the engineer and shall be fixed and incorporated in an agreement in writing between the Corporation and the corporation of such municipality.** Schedule "A" to the By-law sets forth the agreement with non-resident water consumers. Schedule "B" to the By-law sets forth a list of the agreements entered into with adjacent municipalities.

There is no provision in the special act whereby an agreement shall be entered into by the Corporation of the City of Ottawa with the applicants in this matter so that the agreements which have been entered into must have been entered into under and, by virtue of By-law No. 8267. Under the special legislation the Board of Control should enter into agreements for the supplying of water.

The Board therefor finds that the agreements with the respondent in this matter have not been entered into by virtue of the special legislation of the City of Ottawa (Act of 1872 and amendments) hereinbefore referred to and that therefor the applicants have the right to apply to the Board under and by virtue of Section 59 of the Board's Act as amended by Statutes of Ontario, 1940, Section 1, and the motion of the respondents is therefor dismissed. Costs of this motion are to be determined by the Board on hearing the application.

Chairman.

W. P. NEAR,
Vice-Chairman.

P.F. A-9303

IN THE MATTER of Section 15 of "The Grand River Conservation Act, 1938" (Chapter 15).

BETWEEN:

THE NORWAY REALTY COMPANY LIMITED

Appellant,

—and—

THE GRAND RIVER CONSERVATION COMMISSION,

Respondent.

(Appeal from Decision of the Grand River Conservation Commission, fixing the amount of compensation to be paid to the Appellant in respect to the expropriation on Part of Lots 7 and 8, Concession 4, in the Township of West Garafraxa in the County of Wellington, consisting of 200 acres more or less with buildings thereon).

COUNSEL:

H. J. McNulty, K.C.

For the Appellant

H. J. Sims, K.C.

For the Respondent

THIS IS AN APPEAL by the owner from the award of compensation of the engineers appointed by the Grand River Conservation Commission in respect to a farm of 200 acres, 137 of which has been expropriated by the Grand River Commission for the purposes of the Commission under the powers conferred upon the Commission by the Grand River Conservation Act, 1938, Cap. 15.

An offer of \$9,640.00 for the said expropriated lands was made by the Commission on the 2nd day of March, 1940, but this was refused by the owner on the 11th day of March, 1940. On the 11th day of April, 1940, the Board appointed Wednesday, the 8th day of May, 1940, at 10 a.m. at the Public Library in the Village of Fergus as the time and place for the hearing of the appeal herein, and at that time the full Board heard the evidence tendered by the appellant and the respondent, and at the request of both parties viewed the property.

At the trial the appellant contended that the balance of the lands were of little or no value to it because there were no buildings and it would not be wise to build new buildings on a 63 acre farm. Since the hearing the parties have entered into an agreement by which the Commission agrees to purchase the balance of the lands and both parties agree that the price of the whole farm shall be fixed by this Board. A copy of the said agreement has been filed with the Board.

The farm is described as the South West half of Lot 7 and the South West half of Lot 8 in the Fourth Concession of the Township of West Garafraxa in the County of Wellington and contains 200 acres more or less. It is situated on the allowance for road between the Third and Fourth Concessions of the Township which allowance for road ends at the Grand River at the south corner of the farm. The frontage on the road is 4010 feet and of this 2960 feet is high land and is the front of the part not expropriated by the Respondent. East of this frontage the land falls gradually to the banks of the Grand River, and with the exception of the 63 acres, all of the said lands will be flooded by the works undertaken by the Commission. The buildings are east of the 63 acres, not on the higher land but well situated. They consist of a brick house built in 1883 but in a good state of repair, a large frame barn in a fair state of repair, and some smaller buildings not of much value. There is a row of evergreens west of the house. The orchard is of no value. There is no water at the barn, the well having failed some years ago.

At the north east corner of the farm there was a bush covering some 16 acres, and at the north west corner there was a bush covering some 17 acres, both of which were sold by the Commission for \$810.00, and at the time of the inspection by the Board, had been cut down. The balance of the land has been cultivated. The farm is not well situated being at the end of a blind road often blocked by snow and it is then necessary to make a road through the fields.

In 1909 the farm was sold by Richardson, the then owner, for \$18,000.00. In 1914 it was sold for \$12,500.00. After sales in 1916 and 1917, it was sold by the then owner to Ryan and Stapleton who incorporated the Norway Realty Company, the present owner. Since 1924 the farm has been rented. The rental is now \$200.00 a year and taxes. The Norway Realty Company is a holding company for the Stapleton Estate which controls many properties including this farm. D. B. Stapleton is the Secretary-Treasurer and Managing Director. He said he had been on the farm only 6 times in 21 years. In 1919 the rent was \$600.00 and taxes. In 1924 the half interest of Ryan was purchased for \$8000.00 but this was not cash.

The Grand River Conservation Act 1938 states that the Board of Engineers shall determine the amount of compensation payable. This Board was composed of H. G. Acres, G. C. Fairchild, and Herbert Johnson, all eminent engineers, but they felt they were not qualified to place a value on the property and they appointed Messrs. R. H. Smith, a farmer who formerly resided in Garafraxa who has been Reeve and Councillor of that Township, who knew the values of farms, and the sales of farms in the vicinity, and who knew the farm in question well, and J. L. Gregson, the Township Clerk, who knew the value of farms in the vicinity, who knew of sales of farms, and the assessments, to place a value on the farm in question.

The evidence of these two men impressed the Board favourably. They had gone carefully into the different aspects of the valuation and were fair. Mr. Smith said that the former tenant had been sold out; that he left the farm in poor shape and dirty, due to lack of tillage; that water was procured from the river, a distance of about 1000 feet; that the buildings were old and would require a heavy expenditure to keep them up; that the farm is not well situated as the access to it is by a blind road which is usually closed in the winter by reason of snow; that it is 2½ miles from a school. He values the farm at \$11,000. Mr. Gregson agrees with this valuation.

Mr. B. J. McCabe, a Real Estate and Insurance Agent at Guelph, was called by the Appellant. He deals in the sale of farms, but had sold no farms in this Township. He says it is an ideal stock farm, well located, good soil and well drained. He examined the timber and logs cut down and values this at \$2,500.00. He values the land at \$37.50 per acre and the buildings at \$5500.00. His valuation of the buildings is the same as the valuation placed by Messrs. Smith and Gregson. They differ in the valuation of the land and the bush.

Smith and Gregson both agree that \$30.00 per acre is a fair value for the land. They are neighbours. They know what farms in that vicinity have been selling for; they are supported by the Assessor who assesses land for full value, and the Board finds that the value placed by them should be taken in preference to the valuation placed by McCabe.

There is much difference in the valuation of the timber. This has been cut and some of it removed. McCabe values this at \$2,500.00 but does not show any qualifications as to his ability to value it. D. H. Storey, a saw mill operator, said that he looked at the 16 acre parcel of bush land two years ago and he thinks it was worth \$1500.00. He looked at the logs cut on the 17 acre parcel and values it at \$1,100.00. He valued the spruce trees at \$100.00. The Commission did not advertise the two wood lots for sale. They asked several parties for bids and the highest bid they got was \$810.00. The Board was not impressed by Storey.

Smith and Gregson were of opinion that the price obtained by the Commission, \$810.00, was fair, as the wood was mostly cedar, beech and soft elm and showed considerable rot.

Upon due consideration, however, the members of the Board find that the price of \$11,000.00 recommended by the Engineers was fair, taking into consideration the conditions and location of the said lands and buildings and the values of lands in the said area at the time of the taking.

Accordingly the appeal is dismissed and the appellant having paid the Board's fee of \$25.00, there will be no order as to costs.

ASSESSMENT APPEALS

P.F. A-9596

IN THE MATTER of Section 83 of "The Assessment Act,"

BETWEEN:

ALGONQUIN CORPORATION LIMITED

Appellant,

—and—

THE MUNICIPALITY OF THE VILLAGE OF BURK'S FALLS,

Respondent.

N. S. Robertson, Esq.

Counsel for the Appellant

C. S. McGaughey, Esq.

Counsel for the Respondent

DECISION OF THE BOARD

THIS IS AN APPEAL from the decision of the Judge of the District Court of the District of Parry Sound with regard to the Assessment of land and buildings in the Village of Burk's Falls heard on Thursday, the 12th day of September, 1940, at the same time as the appeal of Knight Brothers.

The Court of Revision reduced the assessment on Lots 11 to 15 Syples Street by \$3,000.00 but upheld the assessment on all other properties. The learned Judge dismissed the appeal from the decision of the Court of Revision.

The only real evidence as to the value of these properties was again given by Smith, the assessor, who maintained that his assessments were extremely reasonable. There is a factory and other buildings on these lots and they are assessed at \$700.00 per lot. The contention of the appellant is that these lots were not more valuable than the lots further down the river and that they should be assessed for \$75.00 per lot. There is no evidence to support this contention. The lots below have been said to have been filled by muck, logs, sawdust, etc., and Lots Numbers 11 to 15 are much better situated.

Having viewed the properties and heard the evidence of the witnesses, the Board is unable to find that the assessments as fixed by the Court of Revision are in any way unreasonable and the appeal is therefore dismissed.

The appellant having paid the Board's fee, there will be no order as to costs.

DATED at Toronto this 1st day of November, A.D. 1940.

DECISION OF THE BOARD

THIS IS AN APPEAL from the decision of the Judge of the District Court of the District of Parry Sound with regard to the Assessment of land and buildings known as mill site, dam, etc., Syples St., W. pt. blk. A. and B and Intake, and office, flume and bulkhead, and was heard by the Board in the Council chambers in the Village of Burk's Falls on Thursday, the 12th day of September, 1940.

The Appellants had constructed a dam in the River from which they developed water power and electrical energy, and they, under an agreement which will expire this year, supplied electric lights and power to the Town. Their mills had been operated by this power and electrical energy. Some years ago the Company went into liquidation and for several years some portions of the buildings have been leased to and used by one Klein and Company. Other portions of the buildings are used by both the appellant and Klein and Company. It is admitted that arrangements would be made between the appellant and the lessees as to payment of the business tax found to be due.

For some years the appellant has enjoyed a fixed assessment on its property and this agreement expires this year. The properties have been assessed annually, but this year, by reason of the expiry of the fixed assessment, the assessor says that he made a more careful assessment and in some instances the assessment was increased. The assessments made by the assessor were as follows:

	Land and Buildings	Business
Mill site, dam, etc.	5,000.00	
Syples St., W. Pt. Blk. A. and B. and Intake	8,000.00	
Office, flume and bulkhead	15,000.00	7,000.00
	\$28,000.00	\$7,000.00

On appeal to the Court of Revision the assessment was reduced to \$20,000.00 on Land and Buildings and \$5,000.00 for Business. On appeal to the County Judge, this finding was substantiated and the appeal was dismissed.

To support its contention that it was over assessed, the appellant called the Town Assessor, W. H. Smith, who said that he inspected the property carefully and that even now he did not consider the appellant was assessed for full value. His direct examination was really a cross examination without objection by Counsel for the Respondent. With reference to item 1, when it was pointed out to him that some of the timbers in the dam and on top of the dam showed evidence of decay, he said that the dam itself was of a value of \$1,000.00; that the land including water rights was worth \$4,000.00. He did not say, as argued by Counsel for the Appellant, that the land was worth \$3400.00, nor in the opinion of the Board did he place himself in the position of placing that value on the land. The Members of the Board understood him to say that the dam as a structure by itself was worth

\$1,000.00. The lands included in mill site, should not be compared in value to other lands in the town or even other lands owned by the appellant.

In Item 2, the west part of Blocks A and B and Intake, in his examination Smith assessed the land at \$3,000.00 and the structure at \$5,000.00 but claimed they were not assessed at actual value, but he kept the assessment down because he wanted the appellant to continue operating. He had increased the 1939 assessment and Counsel contended that this was increased because the appellant refused to reduce power rates to the Corporation. There is no evidence of such a motive. There is no evidence to disprove Smith's estimate of the actual value.

In Item 3, Office, bulkhead and flume and land \$15,000.00, there is no basis for the argument that the values of these properties would not be increased by reason of being along the river.

Smith, the assessor, was called by the Appellant and the Board is therefore asked by the appellant to accept his evidence. His evidence was fair and not tinged with any animosity. He could not in any way be considered an adverse witness. There was no evidence offered by the appellant to show that his assessments were not fair and reasonable. Evidence to the effect that the properties were not being operated to the same extent as formerly is not evidence refuting his valuations. There is evidence to the effect that efforts are and have for some time been made to effect a sale. Culbert's evidence of an offer of \$25,000.00 is not evidence of value. He is a Service Station Operator. He said that that is all that he could afford to pay.

Having heard the witnesses and considered their evidence and having at the request of both parties, examined the properties, the Board finds that it should not interfere with the findings of the Judge and the Court of Revision. The appeal is therefor dismissed. The appellants having paid the Board's fee, there will be no order as to the costs.

Assessment Appeal Re: 55-59 King Street East

COUNSEL: S. R. Jefferess For the Appellant
 A. J. Polson, K.C. For the Respondent

BOARD'S DECISION

This was an appeal pursuant to Section 84 of the Assessment Act on the 1939 assessment of 55-59 King Street East in the City of Hamilton, and was heard by the Board, all members sitting, at that city on the 4th of March, A.D. 1940.

V. H. Edwards, and Stewart Chambers gave evidence for the appellant to the effect that the assessment of the land was in excess of the actual value of the same.

A. A. Parker, Fred S. Lumsden and Thomas Crompton gave evidence on behalf of the respondent city to the effect that the assessment under appeal was justified.

It is noted that the land assessments in the block were raised in 1939 and while the Board views with some misgiving an increased assessment on the type of property under appeal, namely, a business block in an old and central section of the city, nevertheless the members have been unable to come to the conclusion that the present assessment is in excess of the actual value of the land in question. The appeal is accordingly dismissed.

The appellant having paid the Board's fee upon the issuance of the appointment and having failed in the appeal, there will be no further order as to costs.

IN THE MATTER of Section 84 of "The Assessment Act", (R.S.O. 1937 Chapter 272)

BETWEEN:

LONDON REALTY COMPANY LIMITED,

Appellant,

—and—

THE CORPORATION OF THE CITY OF LONDON,

Respondent.

COUNSEL. P. J. W. Glasgow, Esq.	Counsel for the Applicant
H. Davidson, Esq.	Counsel for the Respondent

THIS IS AN APPEAL pursuant to Section 84 of "The Assessment Act" heard by the Board, all members sitting, at London on the 2nd, 3rd and 4th days of April. The property in question consists of the lands and building comprising the Hotel London in the City of London. The 1939 land assessment was \$106,920.00 and the building assessment was \$681,080.00, a total of \$788,000.00. The Court of Revision reduced the building by \$28,000.00 leaving a total assessment in appeal of \$760,000.00.

H. F. Struckett, hotel manager, John Putherbough, a general contractor, and H. G. Wright, hotel company executive, were called as witnesses for the appellant, and H. E. Radford, H. J. Bennett, F. England, assessor, T. C. McBride and H. J. Walker were called as witnesses by the respondent.

The questions relating to the value of the property, namely, the business involved, cost of construction and the present value of the land and building, were gone into very thoroughly by both parties and resulted in direct conflict of evidence.

The case is a difficult one in so far as the nature of the property puts it in a class by itself in the City of London. After careful consideration, however, the Board is unable to find any justification for the increase in assessment proposed by the 1939 assessment. It is noted that the last four years inclusive placed the land at \$106,920.00 and in fact it is admitted by all parties that there is no quarrel with the land assessment. With regard to the building assessment, it is noted that in 1936 it was \$681,080.00, in 1937 \$618,080.00, in 1938 \$618,080.00, and in 1939 the assessment department reverted to the assessment made in 1936 of \$681,080.00. The members of the Board were unable to find in the evidence any justification for the said increase and would view with misgiving any policy of assessment whereby assessments were either decreased or increased without some pertinent reason.

The Board accordingly directs that the 1939 assessment be as follows:

Land	\$	106,920.00
Buildings		618,080.00
TOTAL	\$	725,000.00

and business assessment accordingly.

There will be no costs payable with the exception that since the appellant has paid the Board's fee of \$25.00, that the said sum of \$25.00 shall be payable by the respondent to the appellant.

HENRY WILBERFORCE AIKINS,

Appellant,

—and—

THE MUNICIPAL CORPORATION OF THE CITY OF TORONTO,

Respondent.

P. C. Finlay, Esq. Counsel for Appellant

F. A. Campbell, Esq., K.C. Counsel for Respondent

This is an appeal from the decision of the County Court Judge of the County of York dismissing the appeal by the appellant from the decision of the Court of Revision on the land known as Lots 1 to 9 inclusive, Registered Plan D. 1335, Bloor Street West in the City of Toronto.

The Board at the request of both parties, viewed the properties in question. After carefully considering all of the evidence adduced and noting that the Court of Revision had reduced the assessment materially, the Board finds that the premises are not at the present time assessed at more than their actual value and the appeal is therefor dismissed.

Formal Order of the Board will issue upon application of the respondent and the appellant having paid the sum of \$25.00 for the Board's fees on the issuance of the Appointment herein, there will be no Order as to costs.

A. J. Bentley, Esq. _____ For the Appellant
F. A. Campbell, Esq., K.C. _____ Counsel for the Respondent

This is an appeal from the decision of the County Court Judge, upholding the Assessment by the Court of Revision, on the land being Lot 24, Plan 6A being on the west side of Bay Street, and was heard by the Board at its Chambers in the Parliament Buildings in the City of Toronto, on Monday, the 26th day of February, 1940.

Evidence was presented by A. J. Bentley on behalf of the Appellant and Harry Nixon, Deputy Assessment Commissioner of the City of Toronto, on behalf of the Respondent.

After due consideration the Board is of the opinion that the appellant has not established as a fact that the lands are over assessed or that the assessment is in excess of the actual value of the land and the appeal is therefore dismissed.

Formal Order of the Board will issue upon application of the respondent, and the appellant having paid the sum of \$25.00 for the Board's fees on the issuance of the appointment herein, there will be no Order as to costs.

IN THE MATTER of Section 84 of "The Assessment Act" (R.S.O. 1937, Chapter 272),

BETWEEN:

T. H. HANCOCK, LIMITED,

Appellant,

—and—

THE CORPORATION OF THE CITY OF TORONTO,

Respondent.

F. A. Campbell, K.C..... For Appellant
 H. E. Manning, K.C..... For Respondent

This is an appeal from the decision of the County Court Judge, upholding the Assessment by the Court of Revision, on the land being Lots Numbers 1372, 1376 and 1386 on the plan of Symington Avenue, and the buildings erected thereon, and was heard by the Board at its Chambers in the Parliament Buildings in the City of Toronto on Monday, the eleventh day of March, A.D. 1940.

T. H. Hancock, the manager of the appellant company, gave evidence to show that up to the time of the depression this company had done a very large business, which had fallen off very materially. He felt that the falling off of the business was by reason of the fact that most of the building had been carried on during the past few years on the outskirts of Toronto and that by reason of the situation of his property, he was not getting his share of the business. He said that he would sell for less than \$50,000.00. He pointed out that he carried insurance of \$300,000.00 which was a blanket insurance on the buildings, lumber and machinery. He said that his lumber stocks were about \$200,000.00 and that his machinery would be valued at about \$100,000.00. He also claimed that the lands were not suitable for a lumber business at the present time, that most of the lumber was brought in by truck, and that the railway sidings did not add much to the value of the property for a lumber business. In cross examination he admitted that he did a gross business of \$320,000.00 last year, and that when the subway was built in 1928, he had claimed damages of \$250,000.00 and that he had received \$150,000.00 damages. This subway took no part of his land but by reason of the subway there is a ramp in front of most of his land. Within the past few years, he had built a box factory at a cost of \$10,300.00 and had done other repairs in 1932, 1936 and 1938.

Thos. A. Patterson, the Director of the Mickle-Dyment Lumber Company, pointed out that there was too much competition for the larger lumber companies as outsiders and the smaller lumber companies were selling at less cost, and that none of the lumber companies are doing the business that they formerly did.

J. D. Copeland of the Laidlaw Lumber Company, gave similar testimony, and Harold Walker, a realtor of Toronto, suggested that the property should be divided by the extending of Campbell Avenue south to Bloor Street, and that 2.7 acres west of the westerly limit of such extension would be industrial property and worth perhaps \$10,000.00 per acre. He suggested that the appellant could move to Leaseid and purchase property which would be as valuable for his business as the present property at \$5,000.00 per acre.

A. W. Hutchinson, a realtor of Toronto for 25 years, also suggested the extension of Campbell Avenue to Bloor Street, and that if the part east of the extension were broken up into building lots, the appellant might get more for it. He also suggested that if the westerly part could be sold for commercial or factory purposes, he might get a higher price for it. He valued the property as a residential property at \$46,000.00 but had not valued it as an industrial site.

H. A. Wickett, a building contractor of Toronto, valued the building on the property separately. Building No. 9 on the plan, the service station, he valued at \$3,-

336.00 for the building and \$1500.00 for the tanks and pipes. This is less than the assessed value of this building. His valuations on the other buildings were much higher than the assessments.

V. H. Edwards was called by the respondents and valued the land at \$78,803.00 being \$18,000.00 per acre. He claimed that the property had more value as an industrial site. He valued the buildings at \$56,000.00.

The Board has considered this matter very fully. This business is a going concern, and the business of the appellant has been carried on on this property for a number of years. With the exception of the assessment on Building No. 9 on the plan, the Board must find that the assessment is not higher than the value of the buildings but finds that the assessment on the service station being No. 9 on the plan which assessment is at present \$7,000.00, should be reduced by \$2,000.00.

The Board has considered the assessment on the land and has also looked at the assessments of the neighbouring properties. In view of the situation of the easterly 2.7 acres, being that part of the appellant's property lying to the east of the extension of the easterly limit of Campbell Avenue, the Board believes that it should be assessed at \$14,000.00 per acre. This land, although facing on Bloor Street, is affected by reason of the building of the subway and the ramp to support the land. The Assessment on the balance of the said property should be at the rate of \$16,000.00 per acre.

The Board finds that the assessment on the buildings should be reduced by \$2,000.00 and that the assessment on 2.7 acres of the land should be reduced by \$2,000.00 per acre making a total reduction in the assessment of \$7,400.00, and that the roll should be amended accordingly.

Formal Order of the Board will issue upon application of the appellants, and the appellants having paid the sum of \$25.00 for the Board's fee on the issuance of the appointment herein, costs in the said sum of \$25.00 shall be paid by the respondent to the appellants.

DATED at Toronto this 11th day of April, A.D. 1940.

BETWEEN:

MARY E. JOHNSTON,

Appellant,

—and—

THE CORPORATION OF THE CITY OF TORONTO,

Respondent.

A. M. Dewar For the Appellant

F. A. Campbell, K.C. For the Respondent

JUDGMENT

This is an appeal from the decision of the County Court Judge, upholding the Assessment by the Court of Revision on the lands and buildings in regard to the assessment on Lot 204 Cheritan Avenue and 95-97, 99-101, 103-105, SW pt. Lot 200, S. pt. Lot 202, 107-109 and Pt. Lot 203 Chatsworth Drive, and was heard by the Board at its Chambers in the Parliament Buildings in the City of Toronto, on Tuesday, the fifth day of March, A.D. 1940.

Evidence was presented by A. K. Kingsmill on behalf of the appellant, and by V. H. Edwards on behalf of the respondent. The appellant attempted to show that the lands were assessed for more than their actual value. The city attempted to show that in the assessments the full frontage had not been assessed and asked the Board to assess the properties in accordance with their contention.

After considering the whole matter, the Board finds that neither the buildings nor the land in question are assessed at more than their actual value. With reference to the measurements, the Board refuses to make a finding and suggests that if there has been a mistake made by the assessor in the measurements, that this should be corrected by the assessor on his next assessment. Both the appeal and the cross appeal will therefore be dismissed.

Formal Order of the Board will issue upon application of the respondent and the appellant having paid the sum of \$25.00 for the Board's fees on the issuance of the appointment herein, there will be no Order as to costs.

DATED at Toronto this 14th day of March, A.D. 1940.

P.F. A-9206

IN THE MATTER of Section 84 of "The Assessment Act", (R.S.O. 1937, Chapter 272),

BETWEEN:

NORWICH UNION LIFE INSURANCE SOCIETY,

Appellant,

—and—

THE CORPORATION OF THE CITY OF TORONTO

Respondent.

Harold E. Manning, K.C. For the Appellant

F. A. Campbell, K.C. For the Respondent

JUDGMENT

This is an appeal by the Norwich Union Life Insurance Society from its assessments on Lots Numbers 46, 48 and 50 on the north side of King Street east in the City of Toronto from the judgment of the County Court Judge who dismissed the appeal of the Appellant from the decision of the Court of Revision, and was heard by the Board at its Chambers in the Parliament Buildings in the City of Toronto on the 22nd day of February, 1940.

Lot Number 50 is 24 feet 3 1/2 inches frontage and 100 feet 2 inches in depth, and the land is assessed at \$950.00 per foot with the buildings at \$17,000.00. Lots 46 and 48 King Street are lots having 19 feet 8 inches frontage with 100 feet depth, and are assessed at \$800.00 per foot frontage and the buildings thereon are assessed at \$5,000.00.

The appellants claim that the assessment on both land and buildings is too high and they claim that the buildings add no value whatever to the land. The rental of the buildings in 1939 amounted to \$10,194.75, but the appellants claim that the expenses of operating the buildings amounted to \$9,900.88 leaving a profit of \$293.87.

W. H. Bosley, a witness for the appellant, has managed the building for a number of years and claims that the building on lot 50 is 54 years old and was formerly a bank building. The building at 46 and 48 King Street was an old hotel and the floors of the two buildings are on different levels. He points out that in nine years operation of the two buildings, there has been a loss to the owners of \$22,779.18 although there was a small profit of \$293.93 in the last year's operation. He says that he has been offering to sell the property and that the largest offer that he received for both buildings was \$25,000.00, \$3,800.00 of which was to be cash and the balance to be secured by a mortgage on the properties. This offer was refused but the appellant did offer to take the \$25,000.00 providing \$5,000.00 in cash were paid. The buildings are both fairly well rented. He claims that the buildings add nothing to the value of the land and that the land at 50 King Street is not worth more than \$600.00 per foot and the inside property is not worth more than \$450.00 per foot. On the appeal before this Board last year Mr. Bosley valued the land at 50 King Street at \$800.00 per foot and the inside property at \$600.00 per foot, but he says that he was wrong.

Frank McLaughlin also called by the appellant, says that the property is worth about \$25,000.00 and pointed out that the Shaw and Begg Building was assessed at only \$50,000.00 and that the Union Trust Company Building, a two-storey building which was a better building than the buildings of the appellant, sold for \$25,000.00. He also says that the present rentals are fair rentals and that the expenses charged by the appellant against rentals are not out of the way. He further claims that the buildings add nothing to the value of the land.

V. H. Edwards called by the city who has been in the real estate business for a number of years, says that he can not see any change in the value of this property from one year ago. He says that the land at 50 King Street is worth \$1250.00 per foot and that the inside land is worth \$1050.00 per foot. He claims that the corner building adds \$18,620.00 to the value of the land and that the inside building adds \$5,125.00 to the value of the land.

H. Nixon, the Deputy Assessment Commissioner for Toronto, reviewed the assessments of these properties during the past few years and pointed out that the assessment on the total property was reduced from \$154,979.00 in 1932 to \$60,810.00 in 1939 or a reduction of 63%, that the land was reduced from \$104,929.00 to \$38,810.00, and that the buildings were reduced from \$50,000.00 in 1932 to \$22,000.00.

Mr. Bosley, on being recalled, said that in 1939 the insurance on the buildings was reduced from \$90,000.00 to \$30,000.00. This was objected to by the owners and after consultation with the owners, the insurance company placed the insurance at \$60,000.00, but later this was reduced to \$50,000.00, and the insurance on the buildings now remains at \$50,000.00.

The assessments on the land seem to be in line with the other assessments on King Street. The north east corner of King and Toronto Streets having a frontage of 23 feet 5 inches and a depth of 81 feet 6 inches, is assessed at \$900.00 per foot. The land to the west of the Appellant's property is assessed at \$800.00 per foot.

In view of the fact that the rentals from the buildings amounted to \$10,194.75 during the year, the Board is unable to find that the buildings do not add any value to the land. The evidence did not show that there had been any depreciation in the value of these buildings since the present assessments were determined by the Board last year, but in view of the fact that it has been shown to the Board that the Williams Building is assessed at \$8,000.00, there seems to be a discrepancy in the assessments of the present buildings with the Williams Building. Under all of the circumstances and in considering the evidence placed before the Board, the Board finds that the buildings in question are assessed at too high a figure, and finds that there should be a reduction of \$1,000.00 in the assessment of the inside building and \$3,000.00 in the assessment of the corner building.

The Board therefore finds:

- (1) That the assessment on Lot 50 for the land at \$950.00 per foot should be \$23,077.00 and the assessment of the building on the said parcel should be \$14,000.00.
- (2) That the assessment on Lots 46 and 48 for the land at \$800.00 per foot should be \$15,733.00 and of the building on the said parcel should be \$4,000.00.

Formal Order of the Board will issue upon application of the appellant, and the appellant having paid the sum of \$25.00, for the Board's fees on the issuance of the appointment herein, there will be no Order as to costs.

DATED at Toronto this 14th day of March, A.D. 1940.

CAPITAL EXPENDITURES

P.F. A-8990

IN THE MATTER of the Application of the City of Toronto, pursuant to Sections 69 and 70 of "The Ontario Municipal Board Act" (R.S.O. 1937 Chapter 60) for an order dispensing with the assent of the electors to the passing of a By-law authorizing the issue of \$329,000.00 debentures, the balance required for extending and making additions to the Toronto Waterworks System and empowering the said Corporation to provide moneys to the said amount for the said purposes.

R. C. Baird, Esq. For the Applicant
 A. M. Dewar, Esq. For Property Owners' Association

DECISION OF THE BOARD

This is an application by the Corporation of the City of Toronto authorizing the issue of the debentures in the amount of \$329,000.00 required by the Corporation in extending and making additions to the Toronto Waterworks System by Statutes of Ontario, 1925, Chapter 113.

The City of Toronto was empowered, without submitting the same to the electors qualified to vote on money By-laws, to pass by-laws for the issue of thirty year serial debentures to an amount not exceeding \$14,000,000.00 to raise money for extending and making additions to the Toronto Waterworks System. From time to time debentures were issued during the following years for this purpose but in the sale of the debentures it was found that the interest rate was too low to provide the full amount of the debentures, and that in the sale of those debentures it is found that there is a deficiency of \$256,773.87 and that the sale expenses, printing of the debentures, legal opinions, etc. cost \$20,898.49 and it was further found that in completing the said works there was an extra cost of \$51,327.64 incurred, the said three amounts mentioned totalling \$329,000.00, and the City of Toronto now applies to the Board to dispense with the vote of the ratepayers and that the issue of the debentures for the said amount be authorized.

The motion was heard by the Chairman and he advised that he would report favourably to the other members of the Board. The Chairman has now reported to the other Members of the Board who have considered the matter, and the Board finds that an Order should be issued that the application be granted dispensing with the assent of the electors to the passing of the said By-law.

DATED at Toronto, this 14th day of August, A.D. 1940. .

P.F. A-9200

IN THE MATTER of the application of the Corporation of the City of Toronto pursuant to Sections 69 and 70 of the Ontario Municipal Board Act for authority to dispense with the vote of the electors with respect to the construction of a new sewage treatment plant at an estimated cost of \$5,600,000.00 and for an order empowering the said Corporation to authorize, proceed with and provide moneys for the said work.

C. M. Colquhoun, Esq., K.C., and

R. C. Baird, Esq., Counsel for the Applicant

DECISION OF THE BOARD

This was an application:

- (1) To dispense with a vote of the ratepayers of the City of Toronto pursuant to the Board's powers contained in Section 69 of The Ontario Municipal Board Act, and
- (2) For approval of the undertaking of a capital expenditure in the sum of \$5,600,000.00 as required by Section 70 of The Ontario Municipal Board Act.

The applications were presented by the City Solicitor and the Mayor and Members of the Board of Control spoke in support thereof. No opposition to the project was voiced at the hearing, notice of which had been published in The Globe and Mail, Toronto Star, and Telegram on the 17th day of February, A.D. 1940.

With regard to the application to dispense with a vote, the Board is granting the same. The matter in substance was approved by a vote on the question by the ratepayers and it is acknowledged by all parties that the present application is substantially of a technical nature.

With regard to the matter of approving the capital expenditure, the Board is satisfied that the expenditure is a necessary one, after perusing the available technical reports and hearing evidence tendered by the elected representatives of the city. Accordingly, the Board's Order of approval will issue as of this date.

The contentious matter at the hearing was with regard to the term of debentures to be issued. The Board had suggested in a letter to the City of February 12th, that it should consider a term of ten years for the debentures having in mind the fact that the debentures would be issued from time to time over a period of four years or five years, which would result in a fifteen year period of repayment, and having in mind also the fact that the approval of the Department of Health to this work was subject to the condition that the final stage of the complete treatment plant will be undertaken within four years of the completion of the first stage. The whole cost of the two stages is estimated to be \$9,499,000.00 so that the debentures for the completed work would likely spread the repayment over a total period of 30 years.

Mr. Colquhoun argued that a ten year term would necessitate a tax rate which could not be borne by the ratepayers. From the figures given to the Board by those representing the city on the application, it is shown that

- (1) For a ten year term, the interest would amount to \$980,000.00.
- (2) For a twenty year term, the interest would amount to \$2,280,000.00.
- (3) For a thirty year term, the interest would amount to \$4,115,470.00.

and that the corresponding annual levies covering both principal and interest would be as follows:

\$658,000.00 for ten years,
\$394,000.00 for twenty years, and
\$324,000.00 for thirty years.

With regard to the ten year term, the Board agrees with counsel for the applicant that the annual charges to cover principal and interest would be unduly high. The members of the Board are convinced, however, that the proper term for the debentures is twenty years having in mind that while it is true the annual charges necessary to meet such debentures would exceed the charges necessary to meet thirty year debentures by \$70,000.00 a year, that a saving in interest amounting to \$1,835,470.00 can be effected if the 20 year term is adopted.

The Board realizes that debentures for the payment for works will be issued from time to time over a period of perhaps four years, and the Board approves of a term of twenty years for each of the successive issues in a total amount of \$5,600,000.00

With regard to the question of the Board's fee on the application, if the usual tariff were followed the fee payable would, in the Board's opinion, be excessive. Having regard to all the circumstances the Board fixes its fee at \$1,000.00. The formal Order of the Board will issue upon the request of the applicant and upon payment of the Board's fee.

CERTIFICATE OF PUBLIC NECESSITY AND CONVENIENCE

P.F. A-8396-a

Tuesday, the 16th day of April, 1940

IN THE MATTER of Section 8 of "The Municipal Franchises Act"
(R.S.O. 1937, Chapter 277),

AND IN THE MATTER of a certain By-law Number 14 A.D. 1939 of
the Municipal Corporation of the Town of Dunnville,

AND IN THE MATTER of an Application of the Dunn Natural Gas
Company, Limited, for a Certificate of Public Convenience and Neces-
sity to construct gas pipes and mains along certain roads of the Cor-
poration of the Town of Dunnville and to supply gas within the limits
of the said Corporation to The Monarch Knitting Company, Limited,
only pursuant to the said Franchise By-law Number 14 A.D. 1939 of the
said Town.

TO:

HIS HONOUR, THE LIEUTENANT-GOVERNOR

of the

PROVINCE OF ONTARIO

CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

UPON the application of Dunn Natural Gas Company, Limited, for a Certificate of Public Convenience and Necessity, pursuant to Section 5 of The Municipal Franchises Act, R.S.O. 1937, Chapter 277, AND UPON reading the copy of the said By-law Number 14 A.D. 1939 of the Corporation of the Town of Dunnville and the other material filed, and the Chairman of the Board (duly authorized under Section 16 of The Ontario Municipal Board Act, R.S.O. 1937, Chapter 60) having, pursuant to appointment and notice thereof as directed by the Board, heard this application at the Town Hall at the Town of Dunnville on the 1st day of April, 1940, and no one appearing in opposition thereto, and the Report of the said Chairman recommending the granting of the said application having on the said 1st day of April, 1940, been adopted by the Board,

THIS BOARD CERTIFIES that public convenience and necessity require that approval or permission be granted to Dunn Natural Gas Company, Limited to construct gas pipes and mains along certain roads of the Corporation of the Town of Dunnville and to supply gas within the limits of the said Corporation to The Monarch Knitting Company, Limited only, in accordance with the provisions of By-law Number 14 A.D. 1939 of the said Town of Dunnville, in the County of Haldimand, entitled "A By-law to authorize Dunn Natural Gas Company, Limited to lay gas pipes and mains along certain roads of the Corporation of the Town of Dunnville, in the County of Haldimand and Province of Ontario, and to supply gas within the limits of the said Corporation to The Monarch Knitting Company, Limited only", which By-law was finally passed on the 8th day of January, 1940, after having been first approved by the electors of Dunnville on the 4th day of December, 1939, pursuant to the Statute in that behalf.

AND IN THE MATTER of an application by Union Gas Company of Canada, Limited, for a Certificate of Public Convenience and Necessity, pursuant to Section 8 of the Municipal Franchises Act.

TO:

HIS HONOUR, THE LIEUTENANT GOVERNOR

of the

PROVINCE OF ONTARIO

CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

UPON THE APPLICATION of Union Gas Company of Canada, Limited, for a Certificate of Public Convenience and Necessity pursuant to Section 8 of "The Municipal Franchises Act, 1937," made on the 19th day of July, 1940, at the Council Chamber in the City of St. Thomas, in the presence of Counsel for the said Company, no one appearing for the County of Elgin or for the Townships of Yarmouth, Malahide or Westminster, although duly served with notice of the appointment (as appears by Affidavit of Edna Primeau, filed and upon hearing what was alleged by Counsel aforesaid;

THIS BOARD CERTIFIES that public convenience and necessity require that approval or permission be granted to the Union Gas Company of Canada, Limited, to construct works to supply, and to supply, natural gas in the Townships of Yarmouth, Malahide, Westminster, and in the County of Elgin, to persons whose land abuts on highways along or across which gas is being carried or conveyed from the wells of the Union Gas Company of Canada, Limited, in the Township of Malahide, to the City of London, or to persons whose land lies within such limits as the Council of any of said Townships may by by-law or by by-laws passed from time to time determine should be supplied with such service.

PAYMENT of the Board's fee on this application, pursuant to R.S.O. 1937, C. 60, s. 104 and s. 107 (re-enacted by S.O. 1939, C. 47, s. 26 (3)), in the sum of \$20.00 is hereby acknowledged and confirmed.

R. S. COLTER,
Chairman.

DIRECT RELIEF—FUNDING A PORTION OF

IN THE MATTER of the application of the Corporation of the City of Toronto for an Order of The Ontario Municipal Board approving of the undertaking of a capital expenditure for Direct Relief for the year 1940, amounting to a maximum of \$646,000.00 which is the estimated amount exclusive of administration cost and cost of items not admissible of government rebate of the Corporation's share of the cost of Direct Relief in excess of \$500,000.00 for the year 1940.

DECISION OF THE BOARD

THE CITY OF TORONTO has applied to the Board for approval of the funding of \$646,000.00 being the estimated amount in excess of \$500,000.00 of the Corporation's share of the cost of Direct Relief for the year 1940. For some years past the City has budgeted currently for \$600,000.00 for Relief purposes exclusive of administration costs and has been allowed by the Board to borrow by way of debentures the balance of the current Relief costs.

The Board's policy with regard to borrowing money on debentures to pay for the cost of Relief has been to require all Municipalities to increase the annual levy in the tax rate and to shorten the debenture term so that at the earliest date possible all Relief moneys shall be levied for in the year in which they are expended.

It is noted that the debenture charges to be levied for in 1940 covering former Relief expenditures, as compared with those necessary in 1939, dropped from \$2,572,019.00 to \$1,958,656.00.

The Board has considered the matter fully and feels in view of the circumstances it would be a backward step to reduce the amount to be placed in the current levy of the City of Toronto to meet its share of the estimated expenditure for relief in 1940, and accordingly the Board would not be prepared to approve of the items set out above, namely, \$500,000.00 to be placed on the current budget and \$646,000.00 to be borrowed. The Board is prepared, however, to issue an Order of approval as of this date under "The Unemployment Relief Act" permitting an issue of debentures for the City of Toronto for 1940 in the sum of \$546,000.00, the term of the debentures to be two years. This would necessitate the City placing in its current estimates the sum of \$600,000.00 exclusive of administration costs, the same sum which has been placed in the said estimates heretofore.

DATED at Toronto this 23rd day of February, A.D. 1940.

DISPENSING WITH VOTE OF ELECTORS

P.F. A-9728

Tuesday, the 29th Day of October, A.D. 1940

IN THE MATTER of Section 69, "The Ontario Municipal Board Act" (R.S.O. 1937, Ch. 60)

BEFORE:

R. S. COLTER, Esq.,
Chairman,

W. P. NEAR, Esq., B.A., Sc.,
Vice-Chairman, and

ALAN VanEVERY, Esq.
B.A., Member

AND IN THE MATTER of a certain By-law of the Council of the City of Fort William providing that the N. M. Paterson Company, Limited and all other elevator companies at present operating in the City of Fort William, who are constructing or who may embark on the construction of what could be known as distress storage for use in the present war emergency, be granted a fixed rate of taxation equal to \$500.00 per calendar year per million bushels capacity, providing that after the war is over the usual business assessment be levied against such building, when in actual use.

AND IN THE MATTER of an application by the Corporation of the City of Fort William to dispense with a vote of the electors in regard to the said fixed assessment.

This application having come on before W. P. Near, Vice-Chairman of the Board, and Mr. Alan VanEvery, Member, both duly authorized under section 13 of "The Ontario Municipal Board Act," at a public hearing on Monday, the 28th day of October, 1940, after notice thereof having been given as directed by the Board, in the presence of counsel for N. M. Paterson Company, Limited, no one having appeared for the applicant or in opposition, upon consideration of what was alleged by counsel aforesaid and of the material filed and the report of the Vice-Chairman and Member recommending the granting of the application having this day been filed with and approved by the Board as the basis for this Order and the Board being satisfied after due enquiry that the assent of the electors to the proposed Fixed Assessment By-law may, under the circumstances, properly be dispensed with;

1. The Board, by the unanimous decision of all members thereof, hereby declares and directs, pursuant to Section 69 of "The Ontario Municipal Board Act" that the assent of the electors of the City of Fort William, or those qualified to vote on money By-laws, to the passing by the Council of the Corporation of the said City of a By-law intituled:

"A By-law to authorize a fixed assessment to N. M. Paterson and Company, Limited, and other Grain Elevators in connection with distress grain storage construction during the present war."

shall not be requisite to be obtained, notwithstanding the provision of any general or special Act.

PAYMENT of the Board's fee on this application, pursuant to "The Ontario Municipal Board Act", R.S.O. 1937, Chapter 60, sections 104 and 107, re-enacted by Statutes of Ontario, 1939, Ch. 47, section 26, ss. 3, in the sum of \$25.00 is hereby acknowledged and confirmed.

R. S. COLTER,
Chairman.

RELIEF FROM RE-BUILDING OF BRIDGE

P.F. A-9274

IN THE MATTER of Section 480, subsection (9) of "The Municipal Act", and

IN THE MATTER of an application by the Corporation of the Township of Adelaide for relief from its obligation to rebuild the bridge on road used in lieu of Town Line running easterly from Highway No. 81 to the junction of Millwood Road in the Township of Adelaide and Head Street in the Town of Strathroy.

COUNSEL: J. G. Logan For certain Property Owners
 Ian MacRae For the Town of Strathroy

BOARD'S DECISION

This is an application by the Township of Adelaide in the County of Middlesex pursuant to the above legislation asking that the township be relieved of any duty which it may be subject to to rebuild a bridge on the road used in lieu of the town line running east from Highway No. 81 to the junction of Millwood Road to Head Street in the Town of Strathroy.

The application was heard by the Chairman and Vice-Chairman at the Town Hall, Strathroy, on the 25th day of April, 1940. Ambrose Topping, Clerk of the Township, and H. Currie, Reeve, outlined the reasons for the application, namely, that in their opinion it would be a saving of expense if the bridge did not have to be built, the same having been washed out by a flood.

Two property owners, Shannon and Rose, gave evidence to the effect that they would be adversely affected both in the matter of the use and value of their lands should the bridge be not replaced.

Evidence before the Board varied as to the cost of the bridge from \$2700.00 to \$1800.00 and it was further pointed out that should the bridge come up to certain specifications, a grant could be obtained from the Department of Highways. The Board was further informed that there was a question of whether Strathroy would be contributing or not, but the question of whether the Town of Strathroy had any duty to contribute was not before the Board at the hearing.

After consideration of all of the evidence, the Board has come to the conclusion that the circumstances do not warrant the Board exercising its discretion to relieve the Township of Adelaide of any duty which it may have to rebuild the said bridge. In the opinion of the members of the Board, the saving to the Township would be negligible taking into consideration the contributions from other sources and payment of compensation to affected property owners. Accordingly the application must be dismissed.

The Township of Adelaide has paid the Board's fee of \$25.00 and there will be no further order as to costs.

DATED at Toronto this 15th day of May, A.D. 1940.

R. S. COLTER,
 Chairman.

D. S. CHARLTON,
 Vice-Chairman.

W. P. NEAR,
 Commissioner.

ORDERS OF THE BOARD

ORDERS ISSUED BY THE BOARD UNDER SECTION 70 OF "THE ONTARIO MUNICIPAL BOARD ACT" (R.S.O. 1937, CHAPTER 60) APPROVING OF THE UNDERTAKING OF CAPITAL EXPENDITURES

NOTE: Where approval granted under additional legislation, applications marked as follows:

"THE LOCAL IMPROVEMENT ACT"

THE FOLLOWING GIVES A BRIEF SUMMARY OF THE EXTENSIONS AND IMPROVEMENTS MADE TO THE RAILWAYS UNDER PROVINCIAL JURISDICTION DURING THE YEAR 1940

CORNWALL STREET RAILWAY LIGHT AND POWER COMPANY, LIMITED

During the year ending December 31st, 1940, this company reports no extensions to its tracks.

They also report an expenditure of \$6,282.39 for cost of surveying land for 1941 extensions and other miscellaneous improvements.

FORT WILLIAM ELECTRIC RAILWAY

During the year ending December 31st, 1940, this company reports no extensions or expenditures upon improvements &c. to track, equipment, land and buildings.

HAMILTON STREET RAILWAY

This company reports no extensions to track during the year 1940.

They however report an expenditure of \$82,553.70 upon additions to equipment, land and buildings. This includes an amount of \$54,563.48 for the purchase of 8 buses.

HUNTSVILLE AND LAKE OF BAYS RAILWAY

During the year 1940 this company reports no extensions to its track or expenditure on improvement to plant.

INTERNATIONAL TRANSIT COMPANY

This company reports no extensions to track during the year 1940.

They however, report an expenditure of \$355.40 on Ferry equipment.

KITCHENER-WATERLOO & KITCHENER-BRIDGEPORT RAILWAYS

This company made no extensions to track during the year 1940, but report an expenditure of \$390.45 upon additions to property during the same period.

LONDON STREET RAILWAY

No extensions to track were made by this company during the year 1940 and on November 30th, 1940, the street railway system was discontinued and bus service commenced.

They report an expenditure of \$360,277.94 upon additions to plant and equipment which includes an amount of \$167,369.81 for the purchase of buses.

MATTAGAMI RAILWAY

This company reports no extensions to track or expenditure on equipment etc., during the year 1940.

MOUNT McKAY AND KAKABEKA FALLS RAILWAY COMPANY

This company reports no extensions to track or expenditure on equipment etc., during the year 1940.

NIAGARA PENINSULAR RAILWAY

This company reports no extensions to track or expenditure on equipment etc., during the year 1940.

PORT ARTHUR CIVIC RAILWAY

This company reports no extensions to track or expenditure on equipment etc., during the year 1940.

SANDWICH, WINDSOR AND AMHERSTBURG RAILWAY

This company reports an expenditure of \$79,582.98 on additions to equipment, land and buildings, which includes an amount of \$67,814.81 (less bus sold \$6,220.63) for the purchase of 10 additional buses.

SUDBURY-COPPER CLIFF SUBURBAN RAILWAY

This company reports no extension of track or expenditures upon additional plant and equipment during the year 1940.

TEMISKAMING AND NORTHERN ONTARIO RAILWAY

This railway reports no extension of track during the year 1940. They, however, report an expenditure of \$364,920.73 upon track improvement, overhead structure, rolling stock, buildings, machinery, etc., during the same period.

THURLOW RAILWAY

This company reports no extension of track or expenditures upon additional plant and equipment during the year 1940.

TILLSON SPUR LINE RAILWAY

This company reports no extension of track or expenditures upon additional plant and equipment during the year 1940.

TORONTO TRANSPORTATION COMMISSION

This company reports an expenditure of \$272,811.80 upon renewals to tracks. They also report an expenditure of \$1,872,187.72 upon additions to equipment, land and buildings &c., during the same period.

NORTH YONGE RAILWAYS AND TOWNSHIP OF YORK AND WESTON
RAILWAYS

The Toronto Transportation Commission, which operates these railways, reports that during the year 1940 no extensions were made to track and also report no expenditures on improvement to equipment, property, etc.

Examiner

FORM TO BE USED BY COMPANIES IN REPORTING ACCIDENTS

ACCIDENTS: Regulations under and in pursuance of Sections 275 and 276 of "The Railway Act, 1927," R.S.O., Chapter 224.

ACCIDENTS—Every company upon the happening of an accident shall give to the Ontario Municipal Board notice thereof in writing by delivering the same at the office of the Board in the City of Toronto or by mailing it, postage prepaid, in a registered letter and addressed to the Board.

Such notice shall contain a statement signed by duly authorized officer of such company setting forth the information and particulars hereinafter mentioned.

Such statement shall be divided into paragraphs, each of which shall include and refer to one (or one group) only of the numbered particulars hereinafter mentioned, and the paragraph referring to each respective numbered particular shall bear the number corresponding to the number hereinafter given for each such particular.

The numbers of paragraphs and the particulars to which each shall refer as aforesaid are as follows:

1. Name or names of company or companies concerned in accident.
2. Numbers of train, engine, car or motor.
3. Date and time of accident.
4. Nature of accident.
5. Exact location.
6. Name in full, address and legal addition of each person injured or killed.
7. Age.
8. Married or single.
9. Passenger, employee or other.
10. If employee, length and nature of service with dates and periods of different occupations (if more than one).
11. If employee, character, experience, skill and fitness with respect to occupation at time of accident.
12. How engaged at time of accident and how long on duty.
13. Cause of accident, how same occurred, with full particulars and details, and diagram, if required.
14. Persons in charge, with full names, addresses and the particulars referred to in paragraphs 10, 11 and 12.
15. Result to person and particulars of injury.
16. Result to property, including amount of damage.
17. Names and addresses of all persons present at, or eye witnesses of, the accident.
18. What investigation (if any), and result of same.
19. Verdict (if any).

The Board reserves the right to require such further and other details, particulars, maps, plans, profiles, documents, models and information or illustration of any kind as to the nature of the accident and a full understanding thereof may suggest or require.

In pursuance of Section 275 and 276 of said Act, the Board declares that all such information so given in pursuance of this regulation shall be privileged.

Signature of Officer.

N.B.—Give name of officer who fills out this report.

REGULATIONS

REGULATIONS AS TO HEIGHT OF CAR STEPS

Under and in pursuance of a certain order of the Board bearing date the 2nd day of June, A.D. 1909, the Ontario Railway and Municipal Board made the following regulations:

The steps on all cars hereafter constructed and used by The Toronto Railway Company and all other street and electric railways under the jurisdiction of this Board shall have steps conforming to the following regulations.

On closed single truck cars the height of the first step above the ground shall not be less than twelve nor more than fifteen inches.

On closed double truck cars the height of the first step above the ground shall not be less than fourteen nor more than sixteen inches.

On open single truck cars the height of the first step above the ground shall not be less than twelve nor more than fifteen inches, and the distance between the first and second steps and the second step and the floor of the car shall measure twelve inches and nine inches respectively.

On open double truck cars, the height of the first step above the ground shall not be less than fourteen nor more than sixteen inches, and the distance between the first and second steps and the second step and the floor of the car shall measure twelve inches and fourteen inches respectively.

REGULATION RE DRINKING WATER ON PASSENGER CARS

Every Electric Railway in Ontario, subject to the jurisdiction of the Board, shall provide in each passenger car which runs 20 miles or more, a suitable receptacle for water with paper cups attached upon or near such receptacle, and shall keep such receptacle, while the car is in use, constantly supplied with cool drinking water for the use of passengers and the conductor and motorman in charge of such car.

This regulation shall not apply to street railways in towns or cities.

Dated at Toronto, this 10th day of April, A.D. 1928.

CHAIRMAN'S LETTER OF TRANSMITTAL

To His Honour

THE HONOURABLE ALBERT MATTHEWS, LL.D.,

Lieutenant-Governor of Ontario

MAY IT PLEASE YOUR HONOUR:

The undersigned respectfully presents the Thirty-Third Annual Report of The Hydro-Electric Power Commission of Ontario for the fiscal year which ended October 31, 1940.

The record of the Commission's work presented in this Annual Report relates to three principal fields—the co-operative municipal field, the field of rural supply, and the northern Ontario field. The first two cover the Commission's activities on behalf of the co-operative systems, and the last relates to its trusteeship of the Northern Ontario Properties on behalf of the Province. Throughout the various sections of the Report dealing broadly with physical operation of the plants, constructional activities and financial statements, these fields of activity are clearly differentiated.

The Report also presents for the calendar year 1940 financial statements and statistical data relating to the municipal electric utilities operating in conjunction with the several co-operative systems for the supply of electrical service throughout the Province.

War Activities

The past year's work of The Hydro-Electric Power Commission of Ontario has been dominated by the necessity for co-ordinating its activities to the war effort of Ontario and of the Dominion. In all departments, first place has been given to the task of ensuring that for the war industries of Ontario there should be ample supplies of power available wherever and whenever needed.

The beginning of the fiscal year in November 1939 found the Commission in a favourable position with respect to power supplies and the promise then made that Hydro could, during 1940, meet a greatly increased demand for power for industries manufacturing munitions and war supplies has been satisfactorily kept without undue difficulty.

The changing war situation resulting from the collapse of France made it necessary to accelerate greatly the pace of Canada's war effort and this

stimulated demands for power. When additional supplies of power are to be provided from water-power developments, plans must be made well in advance. Continuous attention has, therefore, been paid by the Commission to the problem of ensuring that the power resources of Ontario shall continue to be ample to service all war demands. During the past year the Commission advanced the date of taking 20,000 horsepower from the Maclaren-Quebec Power Company from November 1st to July. Other possibilities of increasing its power supplies are being examined.

In providing supplies of power under war conditions, the Commission must plan for the energy requirements as well as the peak demand of the primary load. In other words, not only must the generating capacity of the system be ample to meet the total demand at peak loads, but the water flow at the power developments must be sufficient to keep the generators working at the required capacity for a greater proportion of the day or week. Higher energy requirements make a greater demand upon stored water.

Ogoki River and Long Lake Diversions

One of the more important actions taken during the past year for increasing Ontario's power supplies was the arrangement made with the United States whereby Canada is enabled to utilize immediately for the increase of power output at Niagara for war purposes an additional flow of water equivalent to that which will be added to the Great Lakes as a result of diverting water from portions of the Albany river watershed adjacent to the height-of-land north of lake Superior.

The Long Lake project was completed in 1938 and was used during 1940 for the transportation of pulp wood. Since the arrangement was reached with the United States the completed works have been used to divert some 1,100 cubic feet of water per second to the Great Lakes. Towards the end of the year work was started on the Ogoki diversion which, when completed in about two years' time, will divert an additional 4,000 cubic feet of water per second through the Nipigon lake and river to the Great Lakes. The ability to put to use an additional water flow of 5,000 cubic feet per second through the power plants on the Niagara river as a result of the friendly co-operation extended by the United States to the Dominion of Canada is of special and immediate value, both with respect to peak demands and energy requirements.

St. Lawrence River Project

Although the diversions into the Great Lakes from northern Ontario have been dealt with on the basis of a friendly understanding with the United States, they have, of course a bearing upon the much larger considerations relating to the improvement of the St. Lawrence river for navigation and for power. This subject is again prominently before the people of Eastern Canada and in connection with future power resources of Ontario is of basic importance. The St. Lawrence river improvement is undoubtedly an enterprise that will profoundly influence the growth and progress, not only of Ontario and Quebec, but of the whole of Canada. As a project it is now linked up with the steps being taken jointly by the United States and Canada for the defence of the Americas. It is evident that changing world conditions

must profoundly modify many of the views previously held respecting this great undertaking. During the past year certain investigations and studies relating to power development on the international section of the river were carried on by the Commission. United States authorities also were actively investigating this project and several joint meetings of the technical advisers of each country were held during the year.

Operating Conditions

No special operating difficulties were experienced during the year. Service interruptions were few and no major failure of equipment occurred. Precipitation on most of the watersheds supplying the Commission's generating stations was sub-normal early in the year but the spring run-off filled the storage reservoirs and water conditions at the close of the year were satisfactory.

Interruptions to service due to lightning, sleet and gales were relatively few and little damage was done to lines or equipment. There was only one complete interruption during the year on the 220,000-volt lines supplying power to the Niagara system from eastern sources.

To an increasing degree generating plants and transmission and distribution net-works operated by the Commission on behalf of the various co-operative systems and Northern Ontario Properties tend year by year to become linked together, in so far as the physical properties are concerned. Thus, the Niagara system is linked to the Georgian Bay system by frequency-changers at Mount Forest and Hanover. It is also linked to the Eastern Ontario system by a frequency-changer at Chats Falls. These frequency-changers and their associated tie transmission lines are of sufficient capacity to permit interchange of substantial blocks of power from one system to another, so that diversity in the time of peak load, fluctuating energy requirements, or variations in power supplies available from different power plants, may all be co-ordinated to smooth out the demand curve to the advantage of the inter-connected systems.

Not only are the Commission's own plants inter-connected but connections are also available to certain municipal and privately owned local systems. At times during the past year the Commission was able through these connections to render valuable assistance to the local systems of the Orillia Water, Light and Power Commission, the Rideau Power Company, the corporation of Fenelon Falls, the Campbellford Water and Light Commission, and the municipality of Renfrew, when the output of their own generating facilities was restricted by conditions beyond their control.

The pooling of power resources by the co-operative systems of southern Ontario contributes to the advantage of all three systems, as it reduces the amount of reserve plant required. Instead of three different reserves of plant capacity being maintained, all reserve plant becomes available to any system. In northern Ontario also, inter-connection by means of long tie lines has been beneficial between certain districts. For example, the inter-connection between the generating stations serving the Patricia-St. Joseph district previously made, was of special benefit in 1940 as it enabled the Commission to

transfer to the Ear Falls generating station part of the load carried on the Rat Rapids generating station. This was done for the purpose of raising the level of the English river below Ear Falls to improve navigation and also to limit the draw-down of the elevation of lake St. Joseph.

Load Conditions

Increased deliveries of power for war industries, and increased use of power for commercial, domestic and rural service, all stimulated by the increased industrial demand, featured the operations of the Commission during 1940. For the war industries additional power in large amounts was required and supplied. As was forecast last year, all these extra demands were satisfactorily met and attention was directed to the various means of ensuring ample supplies of power for the future.

Up to September 1940 the increase of the total primary peak load for all systems, was about 14 per cent, or little more than 200,000 horsepower. During October, November and December the monthly increases for total primary load ranged between 6 and 7 per cent, increases of 100,000 to 120,000 horsepower over corresponding months in 1939. This lower apparent rate of increase was due in part to the continuation of daylight-saving time in many municipalities of the Niagara system, and also in part to the fact that in the corresponding months of 1939 a rapid growth in load had taken place.

It is not possible to evaluate with exactness the effect of the extension of daylight-saving time. However, taking into consideration the various factors involved, it is estimated that the reduction in peak load attributable to this cause was, during the closing months of 1940, from 65,000 to 85,000 horsepower. Making the appropriate adjustment for this factor the average

of the monthly primary peak loads during 1940 was nearly 24 per cent higher than in 1938, an average gain of about 12 per cent per year for the two years.

The total output of energy in all systems for primary purposes in the fiscal year was 7,838,000,000 kilowatt-hours, being 19 per cent greater than the corresponding output of energy in the previous year and by far the largest output of primary energy delivered by the Commission in any one year. The higher increase in energy consumption, as compared with the increase in peak demand, reflects longer hours of use in war-time production.

In addition to meeting all primary demands the Commission utilized its reserve capacity to produce an additional 1,850,000,000 kilowatt-hours for secondary power purposes during the year. Much of this was employed in war materials production.

Increased Mining Load

Again, as for several years past, a remarkable growth in load took place in the northern Ontario mining fields. The average of the monthly peaks of the total primary load of all districts was about 20 per cent higher than in the previous year. In December 1940, the combined monthly primary peak of the Northern Ontario Properties reached about 205,000 horsepower.

The accompanying tabulation gives for the months of October and December, 1939 and 1940, the primary peak loads of the co-operative systems and of the several districts of the Northern Ontario Properties. It also gives similar data for the total primary and secondary loads.

Additions to Generating, Transmission and Distributing Equipment

The multiplicity of demands for increased supplies of electricity throughout the Province as a result of war activities, and the increased demand for power for commercial, domestic and general industrial use, makes necessary not only the provision of additional power supplies but also the construction of transmission lines and transformer stations for the wholesale delivery of the power, and a great increase in distribution facilities throughout the Province.

This heavy demand for additional electrical service during the past year has necessitated an amount of engineering and administrative work that is unprecedented in the Commission's history. The aim of the Commission has been not merely to supply a demand that has materialized but to anticipate where possible demands for Hydro service for war purposes.

The extension to the Ear Falls development in northern Ontario referred to in last year's report was completed in June 1940. The unit added, first placed in service in January, has a rated capacity of 7,500 horsepower under a head of 36 feet. The total installed capacity in this development is now 17,500 horsepower.

To serve the growing demands of the Georgian Bay system, work was commenced on the Big Eddy development on the Musquash river. This is

situated about nine miles below Bala and four miles below the Ragged Rapids generating station which was brought into service in 1938. It will have a turbine capacity of 10,000 horsepower under a head of 36 feet and will contain two units. It is expected to come into operation in November 1941.

In the Eastern Ontario system, plans were made for a development at Barrett Chute on the Madawaska river. This development is situated about five miles above Calabogie village. It will contain two units with a total rated capacity of 56,000 horsepower under a head of 154 feet. To improve the run-off on this river the Commission is constructing a storage dam at the outlet of Bark lake about 67 miles up-stream from Barrett Chute. Both the development and the storage works are expected to be available for service in 1942.

Before the war the Commission planned and in part carried out a general strengthening of its transmission lines and distribution networks. Since the war started further improvements have been made in many areas. In July 1940 a new 110,000-volt single-circuit line on steel towers between St. Thomas and Windsor was placed in service. This line, which has a capacity equal to the other two existing lines on double-circuit towers, has greatly improved operating conditions for the western section of the Niagara system.

In the eastern section of the Province substantial progress was made on the construction of a new 220,000-volt line which, when completed, will extend from the eastern boundary of the Province, the Quebec border, to a new transformer station being constructed at Burlington. At the end of December about 225 miles of towers and footings had been erected and 125 miles of conductor had been strung.

The receiving transformer station is being designed for an ultimate capacity of 450,000 kv-a. The initial installation will be two banks of three 25,000-kv-a single-phase transformers together with necessary equipment. Other activities in connection with the Niagara system include the completion of three large transformer stations at Toronto, Thorold, and near Simcoe. Another transformer station is under construction at Hamilton and additional transformer capacity has been installed at many other stations.

In the Georgian Bay system at the Hanover frequency-changer station an additional unit of 6,750 kv-a was installed. It is operated in parallel with the original 5,000-kv-a unit for the interchange of power with the Niagara system.

In the Eastern Ontario system the capacity of the Ottawa transformer station was increased; a new transformer station was constructed to supply power to the National Research Council, and additional capacity provided at many distributing stations.

In Northern Ontario more than 43 miles of transmission circuits were erected and additional transformer capacity was installed at many stations distributing power to the mines.

In rural Ontario the construction of about 1,400 miles of rural primary line was authorized to serve applications from some 10,000 new rural consumers.

Research Work

Since the last war an important contribution to the growth and progress of this Dominion as a scientific and industrial state has been made by research workers. Fortunately Canada has been farsighted in supporting this fundamental aid to industrial progress.

The Testing and Research Laboratory of the Commission is giving valuable technical assistance to the Department of Munitions and Supply and to the United Kingdom Technical Commission in connection with electrical matters.

Capital Expenditure

Extensions to generating stations, transmission lines, rural distribution networks, storage works, etc., during the year necessitated a capital expenditure of \$11,188,042.25 as compared with \$9,136,803.86 in the previous year. In the co-operative systems, apart from rural extensions, the chief capital expenditures were made for important extensions and additions to transmission lines and to transformer stations. In the Northern Ontario Properties, the chief capital expenditures made were for extensions to transmission lines and transformer stations feeding mining properties.

Efficient Utilization of Hydro Service

The Commission's programme of sales promotion was necessarily modified during the past year to meet the changed conditions imposed by the war. A large number of factory inspections were made, and special engineering reports prepared, to assist plants producing war materials to operate more efficiently. This free engineering advisory service on lighting, motive power, and heat treatment, was welcomed and used to excellent advantage by many industrial organizations throughout the Province.

While increasing attention was given to this industrial work, domestic and rural problems were not overlooked. In the rural area, in particular, every effort was made to foster the use of electricity on the farm in ways that would release manpower and enable the farmer to produce in greater volume at lower cost.

CAPITAL INVESTMENT

The total capital investment of The Hydro-Electric Power Commission of Ontario in power undertakings is \$328,910,813.56 exclusive of government grants in respect of construction of rural power districts' lines (\$18,148,898.04); and the investment of the municipalities in distributing systems and other assets is \$120,127,058.33, making in power undertakings a total investment of \$449,037,871.89.

The following statement shows the capital invested in the respective systems, districts and municipal undertakings, etc.:

Niagara system (including Hamilton street railway).....	\$224,124,468.65
Georgian Bay system.....	12,419,752.16
Eastern Ontario system.....	24,689,319.20

Fire insurance reserve.....	88,936.24
Miscellaneous reserves.....	383,250.87
Employers' liability insurance, and staff pension reserves.....	7,709,382.00
Total reserves of the Commission.....	\$139,440,883.13
Total reserves and surplus of municipal electric utilities.....	93,203,419.75
Total Commission and municipal reserves.....	232,644,302.88

Financial Operating Results for 1940

Increase in the use of power in industry, caused by the intensified war effort, had a notable effect upon revenues of the Commission. Sales of power direct to large industries increased the revenues of the Niagara and other co-operative systems by some \$2,200,000, notwithstanding that the increased demand for primary power restricted the amount of energy available for sale as secondary power. The war effort also increased the power demands of many municipalities as compared with the previous year, particularly during the first eleven months. In October 1940, the extension of daylight-saving time lessened the increases in municipal loads and in the consequent revenue derived by the Commission.

For all classes of service combined, the increase in revenue was more than \$4,750,000 or about 14.5 per cent for the four systems operated on behalf of municipalities. The increase in expense for power purchased, for operation, maintenance and administration and for interest, including exchange premium, was less than 4 per cent. This made it possible for the Commission to set aside an increased provision for reserves, particularly for the rate stabilization funds. This action gives practical expression to the policy announced early in the war, of anticipating and as far as possible eliminating drastic changes in the interim rates for power during any period of post-war re-adjustment. At the same time it facilitates financing essential war-time construction.

The Northern Ontario Properties yielded an increase in revenue over 1939 figures of more than \$800,000 or 19 per cent. As the increase in expense for operating items and interest charges was only some \$250,000, there is an increased balance available for reserves.

REVENUE OF COMMISSION

The revenue of the Commission at interim rates from the municipal utilities operating under cost contracts, from customers in rural power districts and from other customers with whom on behalf of the municipalities the Commission has special contracts, all within the Niagara, Georgian Bay, Eastern Ontario and Thunder Bay systems, aggregated \$37,399,535.90. The revenue of the Commission from customers served by the Northern Ontario Properties, which are held and operated in trust for the Province, was \$5,066,193.82, making a total of \$42,465,729.72.

Summarized operating results of these co-operative systems and rural power districts and of the Northern Ontario Properties, follow:

Surplus.		1,655,300.24

With regard to the local Hydro utilities operating under cost contracts, the following statements summarize for each of the four co-operative systems administered by the Commission, the financial status and the year's operations as detailed in Section X of the Report:

NIAGARA SYSTEM

The total plant assets of the Niagara system utilities amount to \$81,328,811.01. The total assets, including an equity in the H-E.P.C. of \$45,609,455.14 aggregate \$144,568,329.62. The reserves and surplus accumulated in connection with the local utilities, exclusive of the equity in the H-E.P.C., amount to \$75,337,559.11, an increase of \$1,419,027.18 during the year 1940. The percentage of net debt to total assets is 18.6, a reduction of 2.4 per cent.

The total revenue of the municipal electric utilities served by this system was \$30,677,444.27, an increase of \$2,118,717.64 as compared with the previous year. After meeting all expenses in respect of operation, including interest, setting up the standard depreciation reserve amounting to \$2,125,698.12 and providing \$2,223,707.93 for the retirement of instalment and sinking fund debentures, the total net surplus for the year for the municipal electric utilities served by the Niagara system amounted to \$1,280,866.74, as compared with \$661,463.52 the previous year.

GEORGIAN BAY SYSTEM

The total plant assets of the Georgian Bay system utilities amount to \$3,026,575.25. The total assets, including an equity in the H-E.P.C. of \$1,697,365.75 aggregate \$5,284,015.09. The reserves and surplus accumulated in connection with the local utilities, exclusive of the equity in H-E.P.C., amount to \$3,192,112.33, an increase of \$60,939.28 during the year 1940. The percentage of the net debt to total assets is 11.0, a reduction of 0.9 per cent.

The total revenue of the municipal electric utilities served by this system was \$1,330,359.48, an increase of \$67,474.96 as compared with the previous year. After meeting all expense in respect to operation, including interest, setting up the standard depreciation reserve amounting to \$95,072.85 and providing \$45,099.86 for the retirement of instalment and sinking fund debentures, the total net loss for the year for the municipal electric utilities served by the Georgian Bay system amounted to \$18,182.98 as compared with a loss of \$26,897.01 the previous year.

EASTERN ONTARIO SYSTEM

The total plant assets of the Eastern Ontario system utilities amount to \$9,392,825.41. The total assets including an equity in the H-E.P.C. of \$2,440,518.23, aggregate \$14,640,965.26. The reserves and surplus accumulated in connection with the local utilities, exclusive of the equity in H-E.P.C., amount to \$10,243,898.36, an increase of \$642,560.31 during the year 1940. The percentage of net debt to total assets is 9.7, a reduction of 1.9 per cent.

The total revenue of the municipal electric utilities served by this system was \$4,051,036.67, an increase of \$294,312.10 as compared with the previous year. After meeting all expenses in respect to operation, including interest, setting up the standard depreciation reserve amounting to \$254,994.50 and providing \$101,843.09 for the retirement of instalment and sinking fund debentures, the total net surplus for the year for the municipal electric utilities served by the Eastern Ontario system amounted to \$290,513.86 as compared with \$162,451.40 the previous year.

THUNDER BAY SYSTEM

The total plant assets of the Thunder Bay system utilities amount to \$2,887,304.27. The total assets, including an equity in the H-E.P.C. of \$2,710,337.64, aggregate \$6,535,501.20. The reserves and surplus accumulated in connection with the local utilities, exclusive of the equity in H-E.P.C., amount to \$3,341,359.07, an increase of \$55,896.33 during the year 1940. The percentage of net debt to total assets is 9.6 a decrease of 0.2 per cent.

The total revenue of the municipal electric utilities served by this system was \$1,336,533.62, an increase of \$97,291.79 as compared with the previous year. After meeting all expenses in respect of operation, including interest, setting up the standard depreciation reserve amounting to \$48,060.93 and providing \$9,273.30 for the retirement of instalment and sinking fund debentures, the total net loss for the year for the municipal electric utilities served by the Thunder Bay system amounted to \$21,400.66, as compared with a net loss of \$11,352.00 for the previous year.

* * *

In concluding this review of the 1940 activities of the Commission reference should once again be made to the excellent co-operation the Commission has received from the partner municipalities and all officials of the local Hydro utilities. Without the whole-hearted support that has been given, the Commission's task in meeting the power demands of the war year of 1940 would have been much more difficult.

My colleagues, the Hon. William L. Houck and Mr. J. Albert Smith, join with me in acknowledging the faithful and efficient service given by the Commission's staff, many of whom have worked exceptionally long hours to meet war-time emergencies. Our thanks are also extended to the Press for its continued interest and support.

Respectfully submitted,

T. H. HOGG,
Chairman

TORONTO, ONTARIO, MARCH 31ST, 1941.

T. H. HOGG, ESQ., B.A.Sc., C.E., D.ENG.,

*Chairman, The Hydro-Electric Power Commission of Ontario,
Toronto, Ontario.*

Sir:

I have the honour to submit, herewith, the Thirty-third Annual Report of The Hydro-Electric Power Commission of Ontario for the fiscal year which ended October 31, 1940. This report covers the operations of the Commission with regard to the supply of power to, or on behalf of, the partner Municipalities of the several Co-operative Systems, as well as the administration of the Northern Ontario Properties, which are held and operated by the Commission in trust for the Province of Ontario.

I have the honour to be, Sir,

Your obedient servant,

OSBORNE MITCHELL,

Secretary.

THIRTY-THIRD ANNUAL REPORT
OF
The Hydro-Electric Power Commission
of Ontario

FOREWORD
and
Guide to the Report

THE Hydro-Electric Power Commission of Ontario administers a co-operative municipal-ownership enterprise, supplying power throughout the Province of Ontario. The Commission was created in 1906 by special act of the Legislature and followed investigations by advisory commissions appointed as a result of public agitation to conserve the water powers of Ontario as a valuable asset of the people and to provide a more satisfactory supply of low-cost power in Scuthern Ontario. In 1907 The Power Commission Act (7-Edward VII Ch. 19) was passed amplifying and extending the Act of 1906 and this Act—modified by numerous amending acts which now form part of the Revised Statutes of Ontario, 1937, Chap. 62—constitutes the authority under which the Commission operates.

The Hydro-Electric Power Commission of Ontario consists of a Chairman and two Commissioners, all of whom are appointed by the Lieutenant-Governor-in-Council to hold office during pleasure. One of the Commissioners must be a member of the Executive Council and two may be members.

In 1909, work was commenced on a comprehensive transmission system and by the end of 1910 power was being supplied to several municipalities.

The Commission has now been supplying electrical energy for more than thirty years and the Report contains diagrams depicting the growth of the enterprise. During this period the costs of electricity to the consumer have been substantially reduced and the finances of the enterprise have been established on a secure foundation.

At the end of 1940 the Commission was serving 886 municipalities in Ontario. This number included 26 cities, 104 towns, 304 villages and police villages and 452 townships. With the exception of 14 suburban sections of townships known as "voted areas", the townships and 119 of the smaller villages are served as parts of 184 rural power districts.

Financial Features of Co-operative Systems

The basic principle governing the financial operations of the undertaking is, that electrical service be given by the Commission to the municipalities and by the municipalities to the ultimate consumers at cost. Cost includes not only all operating and maintenance charges, interest on capital investment and reserves for renewals or depreciation, for obsolescence and contingencies, and for stabilization of rates, but also a reserve for sinking fund or capital payments on debentures.

The undertaking from its inception has been entirely self-supporting and no contributions have been made from general taxes except in connection with service in rural power districts. In this case, the Province, in pursuance of its long established policy of assisting agriculture and with the approval of the urban citizens, assists extension of rural electrical service by a grant-in-aid of the capital cost and in other ways as specified and detailed in the Report.

As the principle of "service at cost" is radically different from that obtaining in private organizations, where profit is the governing feature, it naturally results in different and in some ways unique administrative features.

The undertaking as a whole involves two distinct phases of operations as follows:

The *First* phase of operations is the provision of the electrical power—either by generation or purchase—and its transformation, transmission and delivery in *wholesale* quantities to individual municipal utilities, to large industrial consumers, and to rural power districts. This phase of the operations is performed by The Hydro-Electric Power Commission of Ontario as trustee for the municipalities acting collectively in groups or "systems," and the financial statements relating to these collective activities of the municipalities are presented in Section IX of the Report. Each system of municipalities, as provided in *The Power Commission Act*, forms an independent financial unit and the accounts are therefore segregated and separately presented for each system. In order, however, that there may be a comprehensive presentation of the co-operative activities of the undertaking as a whole, there are presented, in addition, for the four main systems and miscellaneous co-operative activities, a balance sheet of assets and liabilities, a statement of cost distributions, a tabulation of fixed assets, and summary combined statements respecting the various reserves.

The *Second* phase of operations is the *retail* distribution of electrical energy to consumers within the limits of the areas served by the various municipal utilities and rural power districts. In the case of rural power districts which usually embrace portions of more than one township, The Hydro-Electric Power Commission not only provides the power at wholesale, but also on behalf of the respective individual townships—attends to all physical and financial operations connected with the distribution of energy at retail to the consumers within the rural power districts. Summary financial statements relating to the rural power districts are also presented in Section IX of the Report, and a general report on their operation is given in Section III.

In the case of cities, towns, many villages and certain thickly populated areas of townships, retail distribution of electrical energy provided by the Commission is in general conducted by individual local municipal utility commissions under the general supervision of The Hydro-Electric Power Commission of Ontario. The balance sheets, operating reports and statistical data relating to the individual urban electrical utilities are presented in Section X of the Report.

For the Northern Ontario Properties held and operated by the Commission in trust for the Province there are also presented in Section IX financial statements including a balance sheet, an operating account, and statements respecting reserves and capital expenditures.

THE HYDRO-ELECTRIC POWER COMMISSION OF ONTARIO
TWENTY-FIVE YEARS RECORD—ALL SYSTEMS

Further details respecting administration, and explanations of the financial tables presented in the Report are given in the introductions to sections IX and X on pages 103 and 187.

Co-operative Systems Operating

From time to time in accordance with provisions in *The Power Commission Act* various groups of municipalities have been co-ordinated to form systems for the purpose of obtaining power supplies from convenient sources. In some cases these small systems grew until their transmission lines interlocked with those of adjacent systems and it proved beneficial to consolidate the transmission networks and the financial and administrative features. In the well settled parts of the Province, known as Old Ontario, this process has now reached a more stable condition and the municipalities of the southern part of the Province are now combined in three systems: the Niagara system, the Georgian Bay system and the Eastern Ontario system. One other system of partnership municipalities is known as the Thunder Bay system.

The Niagara System is the largest and most important system. It embraces municipalities in all the territory between Niagara Falls, Hamilton and Toronto on the east and Windsor, Sarnia and Goderich on the west. It is served with electrical energy generated at plants on the Niagara river, supplemented with power transmitted from generating plants on the Ottawa river and with power purchased from Quebec companies.

The Georgian Bay System comprises municipalities in that part of the Province which surrounds the southern end of Georgian Bay and lies to the north of the territory served by the Niagara system. It includes the districts surrounding lake Simcoe and extends as far north as Huntsville in the Lake of Bays district and south to Port Perry. Its power supplies are derived chiefly from local water power developments.

The Eastern Ontario System serves all of Ontario east of the areas comprising the Georgian Bay and the Niagara systems. It includes the districts of Central Ontario, St. Lawrence, Rideau, Ottawa and Madawaska; formerly separate systems. Its power supplies are from local developments supplemented by purchases from other sources.

The Thunder Bay System comprises the cities of Port Arthur and Fort William, adjacent rural sections, the village of Nipigon, and the mining district of Longlac. Two developments on the Nipigon river supply power.

Northern Ontario Properties

In addition to its operations on behalf of the partner municipalities, the Commission, under an agreement with the Province, holds and operates the Northern Ontario Properties in trust for the Province. For the purposes of financial administration these properties are treated as one unit. The Northern Ontario Properties lie in the portion of the Province north of Lake Nipissing and French River areas, exclusive of the territory served by the Thunder Bay system. The principal areas in this vast territory at present receiving service are the *Nipissing District* centering around the city of North Bay on the shore of lake Nipissing; the *Sudbury District* comprising the city of Sudbury and the adjacent mining area known as Sudbury Basin; the *Abitibi*

THE HYDRO-ELECTRIC POWER COMMISSION OF ONTARIO
 PROVINCIAL ADVANCES AND FUNDED DEBT

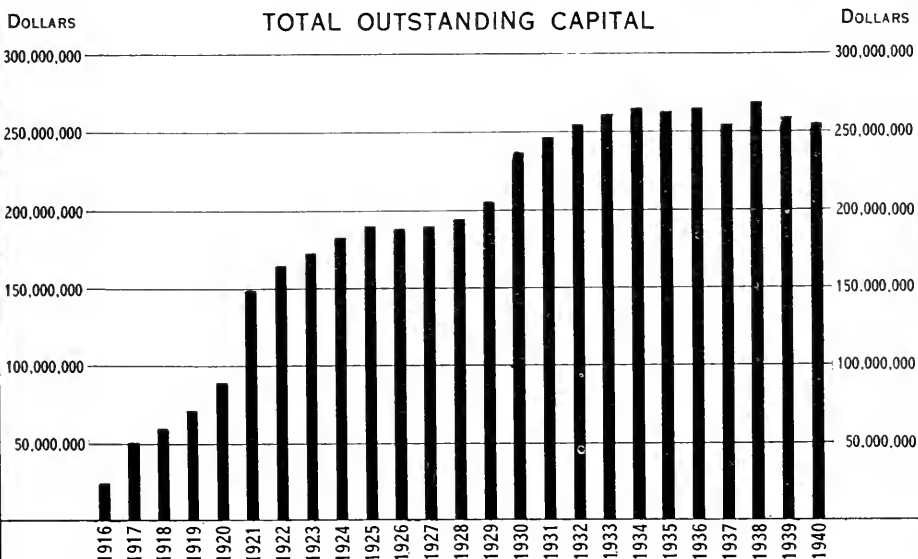

PROVINCIAL ADVANCES

FUNDED DEBT IN HANDS OF PUBLIC

TOTAL OUTSTANDING CAPITAL

District comprising the territory served by 25-cycle power from the Abitibi Canyon development, together with a small area in the southern portion of the district of Sudbury in which mining properties are served with 60-cycle power; the *Patricia-St. Joseph District* comprising the territory within transmission distance of the Ear Falls development at the outlet of lac Seul on the English river including the Red Lake mining area, and the territory immediately north of lake St. Joseph in the territorial district of Patricia served with power from a development at Rat Rapids on the Albany river. Included in the Northern Ontario Properties are rural power districts on Manitoulin island, and others adjacent to the communities served in the various districts of Northern Ontario.

The geographic boundaries of the various systems and districts are shown on the maps of transmission lines and stations at the back of the Report.

The power supplies for the systems and Northern Ontario districts are listed in the first table of Section II of the Report on pages 8 and 9.

The Annual Report

The table of contents, pages xxi and xxii lists the matters dealt with in the Report. At the end of the Report there is a comprehensive index. To those not conversant with the Commission's Reports, the following notes will be useful.

In Section II, pages 7 to 34, dealing with the operations of the systems, are a number of diagrams showing graphically the monthly loads on the several systems and districts. Tables are also presented showing the amounts of power taken by the various municipalities during the past two years.

The rural distribution work of the Commission has proved of widespread interest and special reference to this is made in Section III on pages 41 to 60.

In Sections V and VI will be found information respecting progress of work on new power developments and on transmission system extensions, together with photographic illustrations.

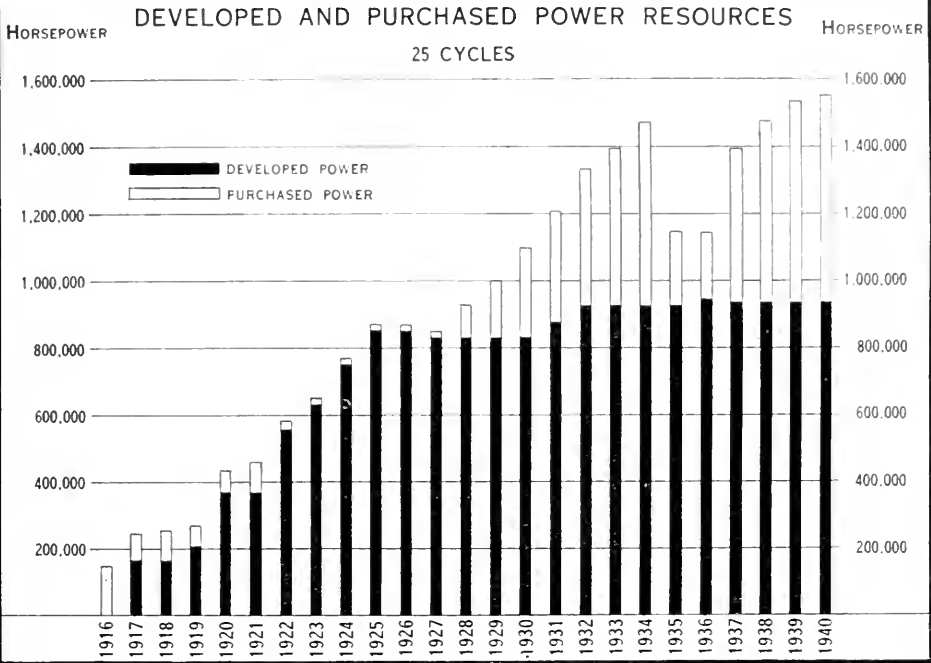

About one-half of the Report is devoted to financial and other statistical data which are presented in two sections IX and X already referred to above.

Frequent enquiries for the rates for service to consumers are received by the Commission. For the urban municipalities served by the Commission these are given in statement "E" starting on page 344. For the rural power districts they are given in a table starting on page 52. Certain statistical data resulting from the application of the rates in urban utilities are given in statement "D". This statement is prefaced by a special introduction starting on page 326.

In its Annual Reports the Commission aims to present a comprehensive statement respecting the activities of the whole undertaking under its administration. Explanatory statements are suitably placed throughout the Report. The Commission receives many letters asking for general information respecting its activities, as well as requests for specific information concerning certain phases of its operations. In most cases the enquiries can satisfactorily be answered by simply directing attention to information presented in the Annual Report.

RIGHT-OF-WAY AND PROPERTY

THE increased scale of operations, closely associated with Canada's war effort, resulted in a 35 per cent increase in right-of-way requirements, largely in the industrialized areas of the Province.

Power Development Lands

A right-of-way 100 feet in width and about 4 miles long for a roadway and transmission line extending from the Ragged Rapids development to the Big Eddy development, both on the Musquash river, was acquired. Adjacent to the Ragged Rapids plant the right-of-way was obtained from a number of private owners, but for most of it the fee was acquired from the Indian Branch of the Department of Mines and Resources, as the site for the development is situated within the Gibson Indian Reserve. By agreement with the Canadian Pacific Railway a siding at Bala was provided.

To provide better access to the Ragged Rapids and Big Eddy developments and to eliminate a hazardous highway crossing of the Canadian Pacific Railway, the Commission joined with the town of Bala, the townships of Wood and Medora and the railway company for the relocation of the highway.

In connection with the new power development at Barrett Chute on the Madawaska river near Calabogie, right-of-way for 3 miles of roadway and transmission line from the Black Donald highway was acquired. Sand and gravel areas were also purchased and a siding at Calabogie was rehabilitated and extended by agreement with the Canadian Pacific Railway Company.

Further claims respecting property abutting Chats lake were settled.

Transmission and Distribution Lines

Rights for 271 miles of the original steel transmission line erected in 1909 were renewed. A greatly increased main line construction programme necessitated the acquisition of 5,613 easements, 1,051 crossing agreements

with other corporations, 1,358 tree trimming agreements, and settlement of 748 damage claims. The fee of approximately 50 miles of main transmission line right-of-way was also acquired, involving 186 purchase agreements.

Transmission line rights of importance were acquired in the following systems:

Niagara System—Urban development adjacent to several of the larger centres made it necessary to purchase the fee of rights-of-way in order to make permanent provision for essential transmission lines. These purchases included property to complete a strip of over-all width of 200 feet extending from Dundas transformer station southerly for 1.5 miles, and a strip of 100 feet of over-all width extending from the east limits of Kitchener through the southerly portion of the city to the Canadian National Railways' main line from Kitchener to Stratford.

A right-of-way was acquired for a 110,000-volt transmission line 109 miles long from St. Thomas transformer station to Essex transformer station. Perpetual easements 100 feet wide were acquired for the easterly 103 miles, and for the westerly 6 miles the fee of a strip of land adjacent to the existing owned right-of-way was purchased to provide an over-all width of 158 feet.

An agreement with the Province of Ontario provided for the sale of former radial railway lands extending from immediately west of the Humber river to Mimico creek upon which was located the main circuit steel-tower line from Niagara Falls. All lands lying south of the Canadian National Railways were surrendered to provide a terminus and grade separation for the Queen Elizabeth Way entering Toronto from the west. In order to maintain the continuity of the important right-of-way entering the city from the west, a strip of land 150 feet in width to the north of the Canadian National Railways and extending easterly from Salisbury avenue to the Humber was transferred to the Commission.

The remaining former radial railway right-of-way and lands lying between Mimico creek and Oakville were transferred to the Niagara system and will be held in reserve until the Commission's requirements are determined.

A lease was negotiated with the Canadian National Railways for the construction of a 110,000-volt steel-tower transmission line from St. Clair avenue northerly along the right-of-way of that railway to Fairbank junction, and easterly to the new Fairbank transformer station on the northerly edge of the Canadian National Railways belt line and immediately east of Danesbury avenue.

220,000-volt lines—A perpetual easement right-of-way 150 feet in width was acquired from Baudet at the inter-provincial boundary at the easterly extremity of the Province to a junction with the Gatineau lines in Whitby township, a distance of approximately 270 miles. Certain revisions to the fourth unused Gatineau line were required in order to bring the new line to a point in Pickering township where the Beauharnois lines diverge to cross the Metropolitan area of Toronto.

From this latter point, rights 150 feet in width are being acquired extending westerly to an intersection with the Canadian Pacific Railway main line in Scarboro township. Commencing at the Canadian Pacific Railway

and extending westerly to Leaside junction, the fee of a strip 350 feet in width is being acquired. Negotiations are being conducted for the acquisition of the fee of a strip 150 feet in width from Leaside junction to Leaside transformer station. From Leaside junction westerly to Etobicoke creek through Metropolitan Toronto a strip of minimum width of 350 feet is being purchased so as to provide a permanent right-of-way to protect the present and future projected needs of the Commission with respect to east and west transmission line requirements.

Other lines of importance for which perpetual easement and clearing rights were acquired are as follows: Decewsville to Rainham junction; Rainham junction to Rainham distributing station; Rainham junction to Jarvis; Lawrence avenue junction to DeHaviland; Bendale junction to Agincourt; Lawrence avenue to York Mills; Sun Brick to East York; Kent to Prince Albert junction; Hamilton to Windermere junction; Escarpment junction to Smithville; Fairbank to Glencairn; Fairbank to Forest Hill; Fairbank to York "C"; York "C" to York "A"; and Fairbank to Kodak junction.

Georgian Bay System—Perpetual easement rights 66 feet in width and rights to clear were acquired for a 110,000-volt wood-pole line from Ragged Rapids to Nobel.

Eastern Ontario System—Perpetual easement rights were acquired for a 110,000-volt wood-pole transmission line extending from Chats Falls to Federal junction, the centre line of which is spaced 100 feet from the existing 220,000-volt line of the Niagara system.

The fee of additional property was acquired near Ottawa from Federal junction easterly to a point near Hawthorne, a distance of six miles; this strip parallels an owned right-of-way, and will provide an over-all width of 225 feet. Negotiations are proceeding for the acquisition of the fee of a 66-foot strip extending from near Hawthorne northerly to the National Research (Ottawa) transformer station intersecting the Canadian National Railways right-of-way at Cyrville junction.

The right-of-way of the Canadian National Railways extending from Ottawa to Hawkesbury was offered for sale and the opportunity was taken to purchase that portion extending from Herdman Bridge to Cumberland. The easterly end of the right-of-way extending from Cumberland to Cyrville junction provided an excellent right-of-way for the tie-line from Lievre junction to Cyrville junction, and the westerly portion thereof is expected to be of very considerable value as a ready means of entrance to the east limits of Ottawa.

Perpetual easement rights for a right-of-way 66 feet in width and 56 miles long, from Frontenac transformer station near the north limits of Kingston to Sidney transformer station near Trenton, were acquired for a steel transmission line. The rights were extended westerly from the latter point to the re-insulated line from Newcome junction to Oshawa transformer station; this completes the 110,000-volt transmission line rights required for the new supply of power to Oshawa transformer station.

Rights were acquired for a new 44,000-volt line from Cornwall transformer station to Howard Smith Paper Mills.

Northern Ontario Properties—Perpetual easement rights were acquired for transmission lines from Kirkland Lake transformer station to Lake Shore Gold Mines in the Abitibi district, and from Couchenor-Willan to McMarmac Gold Mines, and Uchi switching station to Jason Gold Mines, in the Patricia-St. Joseph district.

Station Sites

Some of the more important station sites acquired included the following:

Burlington transformer station, immediately east of the town line between East Flamboro and Nelson townships and adjoining the Canadian National Railways' main line to the north. This site contains an area of approximately 80 acres, and includes a number of small holdings with dwellings which must be removed. Arrangements were made with the Canadian National Railways for a private siding.

At Fairbank a large area was acquired for a transformer station and for future expansion; a number of buildings on the site were removed. Arrangements for a siding were made with the Canadian National Railways.

In Oshawa a transformer station site is being acquired.

A site was purchased for a transformer station at the northwest corner of Brownleigh avenue and Centre street, Crowland township, adjacent to the eastern limits of the city of Welland and adjoining the Atlas Steels Limited property.

In Sudbury, at the corner of Brebeuf and Kathleen streets, a transformer station site was acquired.

Other important sites for switching, distribution or rural stations were acquired at the following places:

East York, Bartonville, Perth, Stayner, Thornhill, Port Hope, DeHavilland, Mountain View Airport, Sharon, Wasaga Beach, Agincourt, Bolton, Brantford Airport, and Rainham.

Of agreements totalling 7,719 negotiated for rights on privately-owned properties, only six owners appealed to the valuator appointed under The Power Commission Act.

Sales and Leases

The policy of disposing of excess lands was continued and many properties were sold.

Lands owned by the Commission in connection with power developments, and also lands comprising several hundred miles of right-of-way not wholly occupied by the Commission's equipment, were leased wherever possible to adjoining property owners subject to joint use thereof. Practically all of the residences owned by the Commission were occupied under lease. A substantial increase in the number of revenue-bearing leases was effected.

Surveys

In connection with the purchase of station sites, transmission line right-of-way, and miscellaneous properties, the renewal of rights, the acquisition of easements and crossing agreements, the settlement of damage claims and other matters as referred to in the foregoing summary, a large number of surveys were made.

Among the more important surveys were those made in connection with the renewal of the rights on 200 miles of the original 270 miles of line constructed in 1909; the purchase of 40 miles of lands for transmission line entrances to important urban areas; the 109 miles of right-of-way between the St. Thomas and Essex transformer stations; the 270 miles of right-of-way from the east Provincial boundary at Baudet to Whitby township, and the power development, transmission line, and roadway lands in connection with the Big Eddy and Ragged Rapids developments of the Georgian Bay system.

Records

The following is a brief summary of the records made:

- (1) All current deeds, including plans attached, were copied in the title record books, and title record plans brought up to date.
- (2) Plans were indexed for all purchases, sales, easements, leases, licences of occupation, crossings and title records.
- (3) The following were indexed: 216 deeds of land; 773 trimming rights and 3,189 transmission line easements.

Taxes

Assessments covering Commission-owned properties were received from 265 municipalities. Where assessments were not in conformity with the provisions of The Power Commission Act, appeals were made, resulting generally in a reduction of assessment and taxes.

SECTION II

OPERATION OF THE SYSTEMS

NO special operating difficulties were encountered during the year; service interruptions were comparatively few, and no major failure of equipment occurred. Precipitation on most of the watersheds supplying the Commission's generating stations was subnormal during the early part of the year, but during the spring run-off storage basins were filled and water conditions at the close of the year were satisfactory.

Load Conditions

The total output from all generated and purchased sources amounted to 9,686,402,421 kilowatt-hours. This was the largest output on record, and exceeded that of the previous fiscal year by 13.9 per cent. The October peak load, including primary and secondary power, was 1,954,069 horsepower, slightly lower than the October, 1939, peak.

The output for primary power purposes also exceeded all previous records. It amounted to 7,837,727,173 kilowatt-hours, an increase of 19.2 per cent. The monthly primary peak loads, without exception, exceeded all recorded maxima for corresponding months in any year. Compared with the previous year the increase in primary peak loads during the first eleven months of the year was in the order of 14 per cent, but as a result of daylight-saving time being continued beyond September, the October primary peak, amounting to 1,783,962 horsepower, was only 6.9 per cent greater than the October, 1939, peak.

The greater portion of the current year's increase in primary load was centred in the Niagara system, and arose in a large measure from the greater demands of the electro-metallurgical and electro-chemical industries in the production of war material. Numerous other plants manufacturing war material also contributed to the year's growth, as did the greater than normal use of electricity in the commercial and domestic fields occasioned by the war effort. Both the Georgian Bay and Eastern Ontario systems recorded substantial increases in load, a considerable portion being directly attributable to the production of war material. In the Northern Ontario Properties

* Because the peak loads on the various generating plants and purchased power sources usually occur at different times, the sum of the individual peak loads would not represent the sum of the peak loads on the systems. These, in the case of each system, must relate to the maximum load occurring at any one time. Consequently, the column headed "Peak load" is not totalled.

*Purchased for delivery to remote rural power districts.

†Purchased on kilowatt-hour basis.

‡Emergency use.

CAUTION: The figures for “Maximum normal plant capacity” reflect the capacity of the various plants under the most favourable operating conditions which can reasonably be considered as normal, taking into consideration turbine capacity as well as generator capacity, and also the net operating head and available water supply.

Owing, among other things, to changes in generating equipment due to wear and tear or the replacement of parts, also to changes in limitations governing water levels and effective net heads, the maximum normal plant capacity is not a fixed quantity but is one which must be revised from time to time.

It is particularly important to bear in mind that the column headed “Maximum normal plant capacity” cannot be taken as an indication of the dependable capacity of the various plants: in some cases it is, but in many cases it is not. Chief among the factors which govern the maximum dependable capacity of an hydraulic power plant and which are not reflected in column headed “Maximum normal plant capacity” are abnormal variations in water supply and operating limitations encountered when plants are so situated on a given stream as to be affected by one another.

the substantial growth of recent years has continued, the total primary peak load rising from 168,000 horsepower in October, 1939, to 202,000 horsepower in October, 1940, an increase of 20.1 per cent, which was about the average increase for the year.

Details regarding the load of each of the co-operative systems and of the several districts of the Northern Ontario Properties are given in the load graphs in this section of the Report.

Maintenance

All lines, stations and equipment were regularly inspected and maintained in efficient operating condition. Except where special emergencies demanded immediate attention, this work was carried out in accordance with regular schedules undertaken to prevent failures of equipment and service interruptions. The thorough and successful nature of the inspection and preventive maintenance work performed is indicated by the absence of serious failures of equipment. Such damage as was experienced from lightning, sleet and wind was promptly repaired, and a rapidly increasing demand for power was met with few interruptions to service.

Forestry

The Forestry division continued its regular transmission and rural-line clearing operations to protect the Commission's lines, equipment and service from tree interference.

Reforestation was continued, but confined to replacement plantings on non-revenue producing lands in the Niagara system.

The year's operations involved treatment of 78,300 trees and 1,545 pole spans of underbrush spread over 3,313 miles of power transmission, telephone and rural distribution lines.

Tree clearance was also obtained for approximately 197 miles of line in connection with the construction of new transmission and rural lines and the rehabilitation of certain existing lines. This work necessitated the treatment of 8,400 trees and 107 pole spans of underbrush.

Line-clearing operations were performed for fifteen municipalities. This work involved treatment of 3,800 trees spread over 58 miles of local primary and secondary lines.

NIAGARA SYSTEM

The total average output of energy on the Niagara system reached the highest level in its history. It exceeded the output in the previous year by 18.1 per cent. Approximately 79 per cent of the total output was supplied for primary power services. Compared with the previous year the average output for primary power purposes was 19.6 per cent greater. In every month the primary peak demand exceeded that of the corresponding month of the previous year. During the first eleven months of the year this increase was of the order of 15 per cent, but in October, when municipal demands were curtailed by the extension of daylight-saving time, the increase dropped to 4.8 per cent.

Capacity in excess of that required for primary services was used to produce approximately 1,540,000,000 kilowatt-hours for delivery to the secondary power market. This represented about 21 per cent of the total energy output.

Operation of the transmission lines was very favourable throughout the year. Interruptions to service caused by lightning, sleet and gales were relatively few, and little damage was done to lines or equipment. On the 220,000-volt lines supplying power from Eastern sources there was only one complete interruption during the year.

In general, the Niagara river plants, together with the available supply from Eastern power sources, have been operated to obtain the greatest possible amount of power and energy. Practically no trouble was experienced from ice conditions in the Niagara river during the winter. On one occasion,

January 14, a large ice jam formed in the lower river which resulted in a reduction in the output of the Ontario Power plant of some 25,000 horsepower for the greater part of one day. Assistance was given to the Niagara Hudson Power Corporation between January 19 and 23, when the output of the Schoelkopf plant was reduced by ice at the intake.

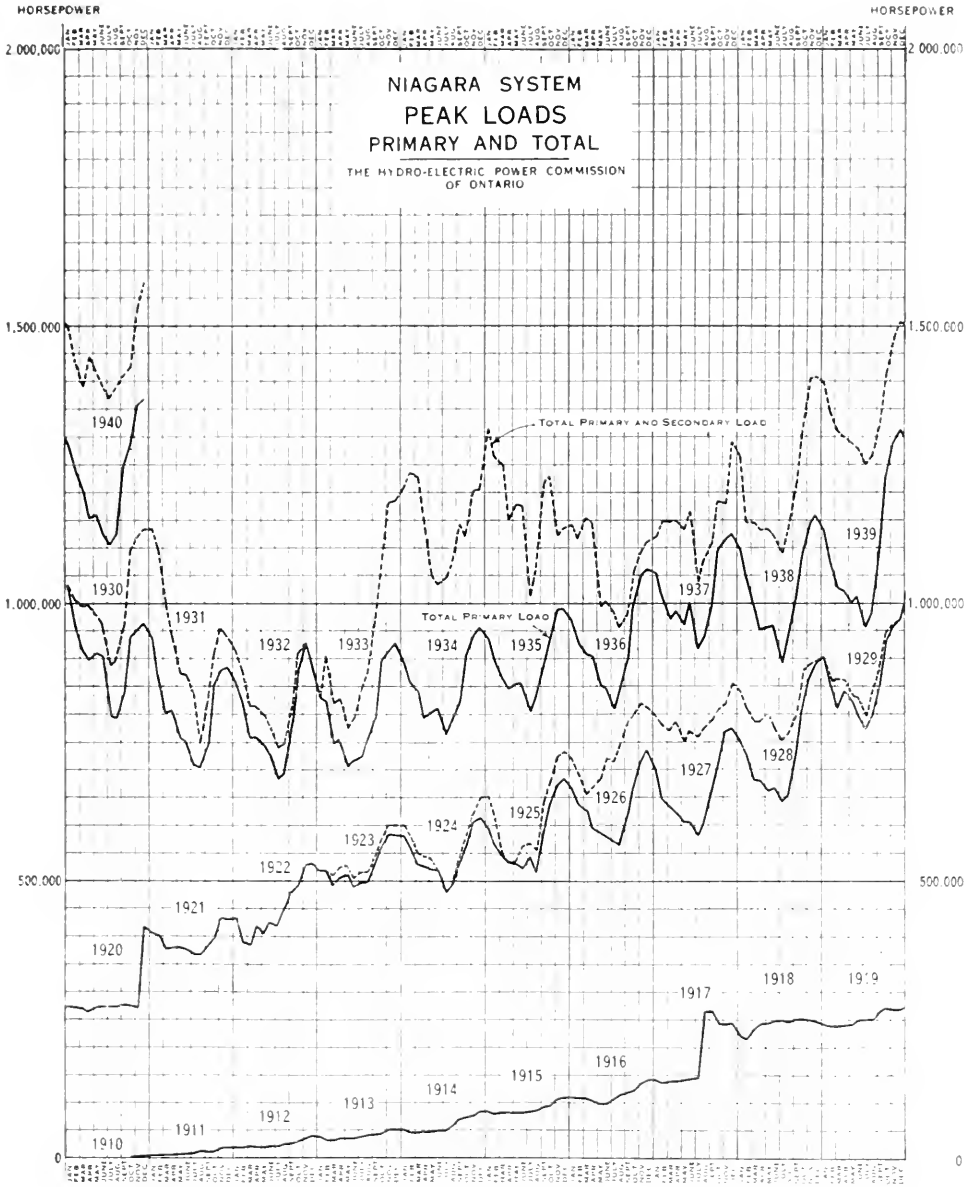

The output of the two units at the Canadian Niagara Power Company's plant reserved for the Commission's use was available to the Niagara system throughout the year. There were no deficiencies in this supply, and all the power and energy to which the Commission was entitled under the terms of the power agreement was delivered.

Except for No. 2 unit, which was out of service for four months for complete overhaul, all units at the Chats Falls generating station were available for operation throughout the year. During the spring run-off, when the Ottawa river flow was in excess of that required to generate full power delivery under the terms of the Ottawa Valley Power Company agreement, the Chats Falls generating station was operated to a maximum in order to utilize as much of the river flow as possible. Natural flow conditions on the Ottawa river drainage basin were below normal during the winter of 1939-40, and although the freshet peaks did not approach those of a normal year, river flow and storage conditions at the close of the year were above average.

The frequency-changer set at Chats Falls generating station was available as a reserve source of supply for the Eastern Ontario system during the year. On a few occasions it assisted in carrying the Eastern Ontario system's primary peak load. In November, 1939, it was used extensively to transfer power for secondary use on the Eastern Ontario system, and for the same purpose occasionally thereafter until August 3, 1940, when the set was operated at part capacity to supply a portion of the export load at Massena, New York.

The DeCew Falls generating station operated to use all the water available during the year. On August 27, diversion from the Welland canal was increased by 330 cubic feet per second under a supplemental lease with the Department of Transport. Load demands on the Dominion Power and Transmission division, in excess of the capacity available at DeCew Falls generating station, were met by the frequency-changer set at Niagara Falls. This set was available throughout the year except during two short periods in June and August when it was disabled. During these periods the capacity of the Dominion Power and Transmission division was augmented by a supply of power from a generating station of the Department of Transport on the Welland ship canal.

The Hamilton steam station was available as a limited standby reserve for the Dominion Power and Transmission division. No assistance was required from this station during the year. The boiler plant was used for generation of steam for commercial purposes up to the end of March.

On November 1, 1939, an additional 60,000 horsepower became available to the Niagara system from the Gatineau Power Company, completing full delivery under the terms of the power agreement with this Company. By arrangement with the Maclaren-Quebec Power Company the increment of 20,000 horsepower due November 1, 1940, was taken on July 11, at 60 cycles, increasing the total delivery from this Company to 80,000 horsepower.

NIAGARA SYSTEM—LOADS OF MUNICIPALITIES—1939-40

Municipality	Peak load in horsepower		Change in load

NOTE: The yearly peak demands of the individual municipal Hydro utilities and also of the rural power districts do not all occur during the same month of the year nor, for any given municipality or rural power district, do they always occur in the same month in successive years; in nearly all cases however the yearly peak occurs during the second half of the calendar year. For this reason a comparison of the peaks occurring during the second half of the year as shown in the tables of this Section shows most satisfactorily the general trend of the local loads.

GEORGIAN BAY SYSTEM

The total energy output of the Georgian Bay system exceeded that of the previous year by 14.6 per cent. There was, however, practically no growth in peak load until the month of October when a munition plant, which went into production about the middle of September, gradually increased its demand until by the end of the year about 4,000 horsepower, of an ultimate demand of 5,000 horsepower, was being taken. The October peak load was 42,217 horsepower, exceeding all previous records and exceeding that of October, 1939, by 21.5 per cent. Lack of peak growth during the summer months, when demands on this system are usually at a maximum, indicates the saving that can be made in bulk power supply by the adoption of daylight-saving time in parts of the area served. On the Georgian Bay system, in the summer of 1940, twelve municipalities adopted daylight-saving time. This advanced the time of the municipal peaks in those communities

one hour, with the result that although there was a substantial growth in the individual municipal loads during the summer, the diversity caused by changing the times of the peak loads in those twelve municipalities was sufficient to permit serving the whole system with practically no increase in system load.

From about the first of December, 1939, until the commencement of the spring run-off in April, 1940, river flows on this system were considerably below normal, necessitating a comparatively large transfer of power from the Niagara system during this period. All storage reservoirs were filled early in June, and, with heavy rainfall in August and September, stream flow conditions at the end of the year were well above normal. During the year 21,968,000 kilowatt-hours were transferred to this system from the Niagara system, representing about 15 per cent of the total Georgian Bay system requirements.

Assistance was given the Orillia Water, Light and Power Commission to the extent of 1,850,000 kilowatt-hours, chiefly during the period of November 28, 1939, to April 2, 1940, because of low water conditions at their plants.

There were no serious interruptions of power service during the year.

In order to provide additional capacity for the Georgian Bay system, a second frequency-changer set of 7,500 horsepower capacity was installed at Hanover and placed in service on June 19, 1940.

EASTERN ONTARIO SYSTEM

The primary load on the Eastern Ontario system, which started to show a substantial increase near the close of the previous year, continued at a high rate of increase throughout the current year. The primary peak occurred in September, and amounted to 155,174 horsepower. It exceeded all recorded maxima and was 9.3 per cent greater than the primary peak of the previous year. The extension of daylight-saving time to the winter months did not produce any appreciable saving on the peak load of this system. The total primary energy, which amounted to 562,238,265 kilowatt-hours, represented an increase of 13.5 per cent over the previous year.

Secondary energy, amounting to a total of 77,251,800 kilowatt-hours, was delivered to the steam generator at the Howard Smith Paper Mills between November 1, 1939, and August 3, 1940, when this delivery was discontinued in order to provide transmission facilities for the supply of 40,000 horsepower, via Cornwall, to the Aluminum Company of America at Massena, New York. Of the above amount 60,700,000 kilowatt-hours were supplied direct from the Eastern Ontario system generating and purchase sources, and the balance by transfer from the Niagara system. In addition, a small amount of secondary energy was supplied to the Aluminum Company of Canada at Kingston. Following August 3, to the end of the fiscal year,

such surplus energy as was available on the Eastern Ontario system, amounting in all to approximately 7,200,000 kilowatt-hours, was in effect transferred to the Niagara system for disposal in the secondary power market of that system.

The system's power resources, including generating capacity and power purchased under contract, were in general sufficient to meet all primary demands. However, on a few occasions in September and October it was necessary to call on the Niagara system for assistance to meet the system's primary peak demand, and on one occasion, January 17, it was necessary to call for the operation of the frequency-changer station at Chats Falls in order to augment the Central Ontario district generating sources when trouble developed on the Kingston-Belleville tie line.

There were no serious interruptions to service of any customer on this system during the year.

Stream flow conditions on the rivers in the Eastern Ontario system were considerably below normal up to the spring run-off due to the lack of the usual amount of precipitation in the fall of 1939. The spring break-up came later than usual, and the run-off during the freshet period was less than in a normal year. However, precipitation following the freshet period averaged well above the normal expectancy, and storage reserves were conserved against anticipated heavier power demand in the fall and winter.

Valuable assistance was rendered at times during the year to the local systems of the Rideau Power Company, corporation of Fenelon Falls, Campbellford Water and Light Commission and the municipality of Renfrew, when the output of their own generating facilities was restricted by conditions beyond their control.

During the year new transmission lines were placed in service to safeguard present supplies, and provide service for new customers. On November 3, 1939, a 44,000-volt wood-pole line of approximately 2.5 miles in length, providing a second circuit to the Howard Smith Paper Mills from Cornwall transformer station, was placed in service. A 110,000-volt wood-pole line between Ottawa transformer station and Chats Falls generating station, of approximately 30 miles in length, was placed in service on March 27, 1940. This line now makes the full capacity of the Chats Falls frequency-changer station directly available to Ottawa and the eastern portion of the Eastern Ontario system. On February 25, 1940, a new 110,000-volt line was made available to serve the Aluminum Company of Canada's new plant at Kingston from Frontenac transformer station.

On August 3, 1940, a new 110,000-volt wood-pole line of approximately 20 miles in length, extending from the Masson generating station of the Maclaren-Quebec Power Company to Federal junction near Ottawa, was placed in service. This line, together with the transmission facilities of the Maclaren-Quebec Power Company, provides a direct supply of 60-cycle power to the Eastern Ontario system from the High Falls plant of the Maclaren-Quebec Power Company. Provisions under the 25-cycle contract supply to the Niagara system permits the taking of a part of this supply at 60 cycles whenever the Commission so desires. Since August 3, these facilities have been used by the Niagara system to supply a portion of the 40,000 horsepower exported to the Aluminum Company of America at Massena, New York.

THUNDER BAY SYSTEM

During the latter part of the summer of 1939, as noted in last year's Annual Report, it became apparent that the inflow to lake Nipigon was below normal and the output of the generating stations on the Nipigon river

was, therefore, limited to an average weekly withdrawal of 8,400 cubic feet per second. As the lake level continued to recede, withdrawal was further reduced late in January, 1940, and since February 5, has been limited to that required for primary load purposes. Consequently there has been a comparatively small amount of energy available this year for the use of the paper mills in the electrical generation of steam. Arrangements, similar to those existing in 1939, were continued during 1940, whereby the paper mills under the control of the Abitibi Power and Paper Company were permitted to obtain secondary power from the Kaministiquia Power Company, a subsidiary of the Abitibi Power and Paper Company, through the Commission's transformers and over the Commission's transmission circuits. After February 1, however, little use was made of these facilities.

The demand for primary power on the Thunder Bay system has, on the average, been 15 per cent greater than in the previous year. However, the primary peak demand was slightly less, falling from 98,934 horsepower in the previous year to 97,855 horsepower. This was due chiefly to the seasonal demand of the grain elevators at Port Arthur and Fort William being lower than usual.

Power service to all customers in this system was well maintained. All generating and transformer stations, and all of the transmission lines have functioned reliably and satisfactorily.

The precipitation on the watershed supplying the Nipigon river plants was 16.94 inches, which is much below average. The elevation of lake Nipigon on October 31, was 849.33 as compared with 850.94 for the same time last year.

THUNDER BAY SYSTEM—LOADS OF MUNICIPALITIES—1939-1940

Nipigon	5.0	6.0		1.0

NORTHERN ONTARIO PROPERTIES

Nipissing District

The maximum 20-minute peak on the Nipissing district was 5,232 horsepower, being slightly smaller than that of the previous year. Energy

consumption, however, was 7.3 per cent greater. Precipitation on the watershed of the plants supplying the Nipissing district was below normal most of the year, and was even insufficient to fill all storage basins during the spring run-off in April and May. Consequently, from the commencement of the year to April and, also, in July and August, it was necessary to transfer to the district large quantities of power from Crystal Falls generating station in the Sudbury district. Water conditions at the close of the year were satisfactory.

Manitoulin District

Operating conditions were normal on the Manitoulin district. The peak demand of the district rose from 273 horsepower in October, 1939, to 330 horsepower in October, 1940, due largely to the extension of rural service.

Sudbury District

The maximum 20-minute peak on the Sudbury district was 22,707 horsepower, exceeding the peak of the previous year by 15 per cent. A con-

siderable portion of this increase resulted from supplying about 2,000 horsepower of temporary power to the Huronian Company in January, February and March, when the Company was short of water at its own plants. Energy consumption during the year exceeded that of the previous year by 4.7 per cent.

Precipitation was sub-normal on the Wanapitei and Sturgeon river watersheds during the early part of the year. However, storage basins supplying the Sudbury district were completely filled in June following the spring run-off, and river flows for the remainder of the year were maintained satisfactorily.

On March 31, the voltage of the Crystal Falls-Coniston tie line was raised from 22,000 to 110,000 volts following the installation of 8,000-kv-a transformers at both the Crystal Falls and Coniston generating stations. The tie line was re-insulated last year for the higher voltage. This change permits the transfer of the full capacity of Crystal Falls generating station to Coniston, which at 22,000 volts was not heretofore practicable.

Abitibi District

Output of the Abitibi Canyon generating station, as governed by flow and storage conditions on the Abitibi river, was at all times adequate to meet the primary demand in the Abitibi district. The phenomenal growth

experienced in this district for the past several years continued, the primary peak rising from 130,968 horsepower in October, 1939, to 164,879 horsepower in October, 1940, a gain of 25.9 per cent. The average primary load was 24.6 per cent above that of the previous year.

Precipitation in the watershed supplying the Abitibi Canyon generating station was subnormal during the first half of the year, and it became necessary late in November to conserve water storage by curtailing the secondary energy supply to the Smooth Rock Falls station of the Abitibi Power and Paper Company for the electrical generation of steam. Further curtailment of this supply, without curtailing mill production, was arranged early in February by the part-time transfer of certain quantities of power to the Smooth Rock Falls station from the Island Falls generating station of the Abitibi Electrical Development Company. On April 23, with the commencement of the spring run-off, these measures were discontinued as the output of the Abitibi Canyon generating station was then adequate to meet all primary and secondary power demands. All storage basins were filled early in June, and water conditions in this district were satisfactory during the remainder of the year.

No special difficulties were encountered in the operation of this district during the year. The forebay boom at the Abitibi Canyon generating station broke loose, due to shore ice, and was lost on May 13. It was replaced by a specially designed boom on July 4.

Through the year there were no serious interruptions to customers' services. High-tension oil switches, with suitable relays, which were placed in service at the Timmins transformer station in August, have tended to reduce the number of automatic line outages caused by lightning south of Timmins.

Patricia-St. Joseph District

The load trend of the Patricia-St. Joseph district was upward during the year. The peak rose from 11,792 horsepower in the previous year to 14,209 horsepower, an increase of 20.5 per cent. Energy consumption in the district was up 31.5 per cent.

To provide for the rapidly increasing load, the capacity available for the Patricia-St. Joseph district was increased early in January, when a third unit was placed in service at the Ear Falls generating station. In general the Ear Falls and Rat Rapids generating stations were operated in parallel throughout the year. Late in the summer, part of the load formerly carried on the Rat Rapids generating station was transferred to the Ear Falls generating station, so that by increasing outflow from lac Seul through this station the level of the English river below Ear Falls could be raised to improve navigation. This transfer of load also reduced the draw-down of the elevation of lake St. Joseph, and maintained more efficient operating conditions for the Rat Rapids plant. Towards the end of the year, the outflow from lac Seul was further increased at the request of the Lake-of-the-Woods Control Board, and the majority of the load of the Patricia-St. Joseph district was then carried by the Ear Falls generating station. Precipitation in the watersheds supplying this district has been below normal, with the result

SECTION III

MUNICIPAL WORK

THE Commission acts in an advisory capacity to the municipalities with which it has contracts, and assists the municipal officials to purchase, construct or extend distribution systems. As provided under *The Power Commission Act*, all rate adjustments are approved by the Commission, therefore, a study of the operating conditions of all utilities is made annually and adjustments recommended.

In rural power districts, the Commission on behalf of the township corporations operates the rural power systems and distributes electrical energy to the customers of the respective corporations in all such rural power districts.

NIAGARA SYSTEM

Under the terms of contracts entered into during the fiscal year 1938 the Commission took delivery of the following additional amounts of power from:

	<i>Horsepower</i>
Gatineau Power Company and Gatineau Transmission Company.....	60,000
Maclaren-Quebec Power Company and The James Maclaren Company Limited.....	20,000
	<hr/>
Total additional power taken.....	80,000
	<hr/>

The municipal load supplied showed an increase of 9.2 per cent in urban municipalities and 11.3 per cent in rural power districts.

Engineering Assistance to Municipalities

General engineering assistance was given to nearly all municipalities of the Niagara system respecting the operation and management of their local Hydro utilities.

Certain municipalities received special engineering advice and assistance respecting matters which are more fully referred to below:

Agincourt—Increased load in the police village of Agincourt and in the Scarboro rural power district required a new substation at Agincourt.

Aylmer—The distribution system on the main street was rebuilt and enlarged; this involved the removal of the poles and the installation of modern street lighting.

Bolton—To provide for increasing loads in Bolton and the surrounding district, formerly fed from Kleinburg, a distribution station was constructed near the south limits of the village.

East York—Two distributing stations, numbers 1 and 3, were put into service April 27 to supply power formerly received through the Toronto Hydro-Electric System. The office building is being enlarged.

Etobicoke Township—A new distributing station in the Kingsway district was put into service on June 14, to relieve overloading of other stations in the township.

Forest Hill—On April 30 the work of enlarging Forest Hill station was completed and all power requirements of the Village supplied from this station, thus terminating the arrangements for a supply from the Toronto Hydro-Electric System.

Grimsby—The work of changing over the distribution system for 25-cycle operation was started and it is expected the conversion will be completed in 1941. A new substation of 1,500-kv-a capacity was erected for serving Grimsby and the adjacent rural power district.

Hamilton—Owing to a great industrial expansion, additional high-tension station facilities, consisting of two 25,000-kv-a transformers together with the required low-tension feeders were installed. Low-tension tie lines giving duplicate service to existing substation facilities were also constructed.

Ingersoll—The distribution system was changed from 2,300 volts delta to 4,000-volt grounded wye system; this involved changes and an increase in capacity in the step-down station receiving 26,400-volt power.

Kitchener—Following a study of present and future load requirements, a substantial increase in the Kitchener substation capacity was undertaken. The transformers at substation No. 1 are being replaced with modern equipment; the capacity of substation No. 3 is being doubled, and two new unit-type substations are being designed and will be installed early in 1941.

All transformers are similar, having a normal rating of 3,000 kv-a, or 3,750 kv-a under forced-air cooling. The primary voltage is 13,200 and the secondary 2,300 star connected.

London—An additional 3,000 feet of 13,200-volt cable and a new 1,500-kv-a outdoor substation was installed in the east-end industrial section.

North York Township—To take care of the normal growth of this municipality, as well as a war industry, a new station was put into service.

St. Catharines—Practically all domestic and commercial-lighting customers served by the Lincoln Electric Light and Power Company, Limited, are now served from the 25-cycle system and a large portion of the 66-2/3-cycle distribution system was dismantled.

St. Thomas—The main bus in the St. Catharines street substation was rebuilt with heavier conductor with an emergency bus added as well as disconnecting switches on each side on the feeder breakers. Ground relays are to be installed on the two incoming 13,200-volt feeders to operate in conjunction with the 13,200-volt reactor at the St. Thomas transformer station.

Scarboro Township—To improve voltage conditions in the south-westerly section of the township and to relieve the load on the main Scarboro stations, a new 1,500-kv-a station was put into service.

Smithville—During the year this police village entered into a cost contract with the Commission for a 25-cycle supply. The necessary changes in the distribution system and customers' equipment were made and the municipality is now operating on 25 cycles from a new substation.

Tillsonburg—The substation was rehabilitated and modern equipment installed. At the same time provision was made to receive 26,400-volt supply, as the Woodstock high-tension station supply feeder voltage will be changed during the coming year from 13,200 to 26,400 volts.

Windsor—A 26,400-volt tie line of 4/0 copper was completed between No. 1 substation Windsor and No. 1 substation Walkerville. This completes an alternative 26,400-volt feed to all the substations in Windsor. Work was commenced on a new 26,400-volt, 4/0 copper feeder from No. 3 substation to Sandwich substation, where the wooden switch structure is being replaced by a modern steel structure.

Woodstock—At the Woodstock high-tension station preparations were made for a change in the supply feeder voltage from 13,200 to 26,400 volts.

GEORGIAN BAY SYSTEM

The total increase in average load sold over the previous year was 10.5 per cent, although the highest twenty-minute peak established was only 5 per cent greater than that of 1939. This variation is due to the adoption and continuation of daylight-saving time in several towns on the system. Otherwise, the increase in the peak load would possibly have been greater than that of the total load sold.

No change occurred in the number of urban municipalities, or rural power districts served by the system during the year, the total being sixty-four of the former, and forty-eight of the latter. The average load sold increased by 9.4 per cent to urban municipalities, by 17.4 per cent in the rural power districts, and by 10.7 per cent for system customers. War industries were responsible for a large increase established near the end of the year by system customers.

General engineering advice and assistance was given to all urban municipalities on the Georgian Bay system in connection with the operation of local distribution systems. Certain municipalities received special engineering advice and assistance regarding matters referred to below.

Alliston—Estimates were submitted for an improved street lighting system in the business section.

Camp Borden—A large portion of the distribution system was reconstructed and the voltage changed from 2,200 to 4,000. The substation capacity was increased by the installation of a new bank of transformers.

Uxbridge—New electrically driven pumping units for domestic supply and fire purposes, with gasoline auxiliary were installed in connection with a new water works system.

EASTERN ONTARIO SYSTEM

The power sold on the Eastern Ontario system showed a sharp increase in 1940, principally due to munitions load or to industries directly affected by war conditions, and with a few exceptions the load increased in all municipalities and rural power districts.

The total amount of power delivered to urban municipalities and rural districts amounted to 117,795 horsepower in 1940, an increase of 8.8 per cent.

The Eastern Ontario system is now taking all the power available from the Commission's generating stations on this system and is also taking all the 60-cycle power provided under the Commission's contract with the Gatineau Power Company. A new generating station is now under construction on the Madawaska river, and for immediate future requirements the system can obtain a supply of power from the Niagara system through the frequency-changer at Chats Falls.

General engineering assistance was given to nearly all municipalities on the Eastern Ontario system in connection with the operation and management of their local Hydro utilities.

Certain municipalities received special engineering advice and assistance with regard to matters detailed below.

Belleville—The city is preparing to add 1,500 kv-a in transformer capacity to its substation.

Iroquois—The village has entered into a cost contract with the Commission and commenced to take power on February 10, 1940, from a new substation in the village.

Kingston—Growth in load due to added industries in and adjacent to the city will require a new substation.

National Research Council—To give service to the new laboratory of the National Research Council, near Ottawa, the Commission has constructed a 110,000-volt line and a new substation.

Peterborough—Extensive changes in the distribution system have been undertaken. A large munition load will be served direct from the high-tension lines.

THUNDER BAY SYSTEM

Three urban and two rural areas are served by the Thunder Bay system, viz: the cities of Port Arthur and Fort William, and Nipigon village; and the Thunder Bay and Nipigon rural power districts. Large industrial supply is given mostly to pulp and paper mills, terminal grain elevators, and mines in the Sturgeon river and Longlac districts west of lake Nipigon in which ten producing gold mines are now served. Although the power loads of the terminal grain elevators have suffered some curtailment on account of war conditions, the demands of the pulp and paper industry were greatly increased, which, together with a considerable growth in the mining load as well as in that of the urban and rural districts, has created a net increase for the total load sold of 13.8 per cent over 1939. The municipal load shows an increase of 8.5 per cent; the rural load 32.5 per cent and the mining load 6.9 per cent. One pulp mill, which was idle for the greater part of the previous year, was again placed in operation, and one of the large pulp and paper mills increased its load by 14.6 per cent.

Due to low precipitation in the fall of 1939, and the winter of 1940, and reduced flow on the Nipigon river, the power supplied on an "at-will" basis for electric steam generation at pulp and paper mills was curtailed, resulting in a loss of revenue from this class of service. However, the general load increase in all other classes of customers served, except that of the grain trade, resulted in a gross revenue gain of 5.6 per cent.

Engineering assistance and advice relative to the operation of the local distribution systems was given to the cities of Fort William and Port Arthur, also to Nipigon township. All of the ten mining properties served were also visited periodically for the purpose of assisting in the power supply problems of these customers.

NORTHERN ONTARIO PROPERTIES

The Northern Ontario Properties comprise the generating plants and transmission lines in the areas of northern Ontario lying north and west of, and including Sudbury and North Bay between the Quebec and Manitoba boundaries, excluding the territory served by the Thunder Bay system. These properties are held in trust and operated by the Commission on behalf of the Province. Operations in this territory involve power supply to fifty-one mining properties, two cities, four towns and ten villages, hamlets and mining townsites, as well as power supply to the Canada Northern Power Corporation, which operates in the northern portion of the same area and in portions of the province of Quebec adjacent to the Ontario boundary.

As in previous years, since the Commission first entered this field in 1929 there was, during 1940, large expansion in load growth, the increase in load sold being 31,000 horsepower or approximately 20 per cent.

All of the mining properties served, as well as the municipal and townsite distribution systems, were visited periodically for the purpose of rendering engineering assistance on power supply problems. Similar assistance was also given to a number of mines in the prospect stage.

Nipissing District

This district includes the area adjacent to the city of North Bay, the town of Powassan and the village of Callander, together with the North Bay and Powassan rural power districts. Three generating plants on the South river, and the Crystal Falls development on the Sturgeon river, form the sources of power supply. The increase in load sold over the previous year was 5.4 per cent. During the year the distribution system in the city of North Bay was sold to the Corporation, after enabling and money by-laws were voted on and approved by the ratepayers. Power purchase and sale agreements were executed between the Commission and the Corporation. The Commission operated the distribution system in North Bay from the date of transfer, June 1, until the end of the year. In 1941 the system will be operated by a local Commission.

Sudbury District

This district includes the city of Sudbury and areas adjacent thereto. Power is supplied from three hydro-electric developments on the Wanapitei river and the Crystal Falls development on the Sturgeon river. Power is supplied to the city of Sudbury, the town of Capreol, the hamlet of Garson, the Sudbury rural power district, and for mining purposes to The International and Falconbridge Nickel Companies. The load sold to the city of Sudbury increased by 11.3 per cent, and the total district load sold increased by 7.1 per cent during the year. To provide for load growth a second sub-station was placed under construction in Sudbury.

Abitibi District

The Abitibi district includes the areas served by the Abitibi Canyon development. Power is supplied chiefly for mining purposes in the mining districts of Porcupine, Kirkland Lake, Larder Lake, Matachewan, and Sudbury, and to The Canada Northern Power Corporation. The increase in load sold in this district over the previous year was 20.9 per cent. In addition to power supply for thirty-one mining customers, service is also given to four mining townsites, one town and one village, all of which have shown an increase in both load sold and additional customers served.

Patricia-St. Joseph District

This district comprises the combined areas served by the Ear Falls development on the English river, and the Rat Rapids development on the Albany river, both of which feed into one interconnecting network of transmission lines. Power is supplied to eleven mines in Red Lake, Woman Lake and Pickle Lake mining districts and to the mining townsites of Red Lake and Cottage Cove, the hamlet of Hudson and the town of Sioux Lookout. A contract was negotiated with The Dryden Paper Co. Ltd. for a large block of power on an "at-will" basis to be delivered early in the new year. The total load sold in this district increased 30.7 per cent.

RURAL ELECTRICAL SERVICE IN ONTARIO

Hydro service brings to Ontario farmers a high standard of living and relief from many arduous tasks in house, dairy and barn

RURAL ELECTRICAL SERVICE IN ONTARIO

THE year 1940 completed a period of twenty years during which the Commission extended rural lines to serve consumers in areas known as rural power districts. It is nearly thirty years since the Commission first supplied rural electrical service to consumers. During the first ten years, service was supplied to townships and in most cases lines were constructed from existing municipal urban systems. During the last twenty years the supplying of electrical service in rural districts has been undertaken by the formation of rural power districts, whose boundaries are not arbitrary geographical limits, such as define the areas of townships, but depend rather upon the economic distance which may be served from a distribution centre.

The land area of the Province of Ontario extends over a vast territory of 363,282 square miles, of which about 35,700 square miles are occupied for agriculture. The total rural population in the area served by The Hydro-Electric Power Commission, or in adjacent areas within transmission distance of the Commission's power supply, is approximately 1,100,000.

There are 184 operating rural power districts, and power is delivered to approximately 123,000 rural consumers, comprising farms and dwellings in various groups. The consumers are situated in 422 organized townships; 16 unorganized townships and 119 police villages, villages and towns, and are served over a network of rural primary lines which aggregate 19,492 miles. In addition to the 438 townships served by rural power districts, 10 townships are served jointly by rural power districts and voted areas.

During the past year the mileage of rural line extensions approved for construction in rural power districts in Ontario was 1,340. In all, 9,865

consumers were added. The aggregate load supplied to all rural Hydro consumers in the Province amounted to 70,018 horsepower, an increase of 13.6 per cent over 1939.

Census data indicate that there are approximately 200,000 farms in Ontario, varying from one acre to six hundred acres or larger. It would be erroneous, however, to conclude that hydro-electric service will eventually extend to such a number of farms. Approximately ten per cent of these are very small, and service to them, if available, is supplied by the Commission under rates applicable to non-farm classes. There are also large numbers of farms jointly owned and tenanted, some having no residential buildings on them, and there are also a large number situated in remote districts out of reach of Hydro lines and stations.

During the period that the regulations respecting service to rural consumers required a minimum of three farm contracts per mile of primary line, the Commission made surveys in various parts of the Province and estimated that approximately 75,000 standard or large farms would comprise the probable ultimate total of farms that could be served on this basis. Since that time new regulations have been made permitting service on the basis of two farms per mile, which necessarily has increased the number of additional farms that may be served.

For the next year it is anticipated that the miles of primary line constructed will be about 80 per cent of the number constructed during the past year. As the lines extend into the more remote districts, however, the average number of farms that can be served per mile of line and the number of farms remaining to be served will become smaller, and therefore the mileage of rural lines constructed each year will decrease.

Recent estimates of the major electrical appliances used in rural power districts are set out in the following table:

**ELECTRICAL APPLIANCES IN USE AMONG FARM CONSUMERS IN
RURAL POWER DISTRICTS**

Data for all systems for the year 1939

On the farm			In the farm home		
Item	Number of appliances	Percentage of saturation	Item	Number of appliances	Percentage of saturation

Standard Number of Consumers per Mile

Effective May 1, 1938, the Commission received authority by Order-in-Council to construct rural primary lines on a basis of two farms per mile under existing rates. This new basis does not include service to summer cottages, which remains on the previous basis of three farms per mile. The standard number of consumers required per mile varies according to the class of service rendered. For this purpose a unit rating is allocated to each class of consumer. A total of ten units per mile made up by various classes of consumers is required before construction work is undertaken.

The following table shows the number of units for each class of service:

Class of consumer	Service	Units per class applicable to number per mile—May 1, 1938			
		A—Regular rural consumers		B—Summer cottage consumers	
		Units per contract	Contracts per mile	Units per contract	Contracts per mile
1B	Hamlet lighting	2.25	4.4	1.5	6.7
1C	Hamlet lighting (range)	3.75	2.7	2.5	4
2A	House lighting	1.9	5.3	1.25	8
2B	Small farm service (50 acres or less)	3.5	2.9	2.35	4.3
3	Light farm service (over 50 acres)	5	2	3.35	3
4	Medium farm service (single-phase)	5	2	3.35	3
5	Medium farm service (three-phase)	5	2	3.35	3
6A	Heavy farm service (single-phase)	5	2	3.35	3
6B	Heavy farm service (three-phase)	5	2	3.35	3
7A	Special farm service (single-phase)	5	2	3.35	3
7B	Special farm service (three-phase)	5	2	3.35	3

Cabin Service

Arrangements were made during the year to provide the Commission's rural customers with electric service to cabins at special rates, which call for a service charge of 30 cents gross per cabin per month and five kilowatt-hours extra per cabin per month to be added to the first kilowatt-hour block. The rates are subject to the usual ten per cent discount for prompt payment. This cabin service is supplementary to the regular supply contract and applies to the months of June, July, August and September of each year.

Maximum Consumption Charge

The Commission has found that the maximum economic limit of the first domestic use through the rural power districts of the Province is 6 cents per kilowatt-hour. In all rural power districts the first consumption rate is fixed at a maximum of 6 cents per kilowatt-hour. The second rate has a maximum of 2 cents per kilowatt-hour which applies to all districts.

Low Third Consumption Rate for Long-Hour Users

In 1934 the Commission made available for rural consumers a special energy rate for long-hour users of power. This low rate particularly affects under-earth heating (hot-beds) and heating of water. Where the extra use of energy may be obtained from the present equipment, a third follow-up rate per kilowatt-hour of 0.75 cents gross is given in all districts. The first rate remains unchanged, except that as pointed out above it is subject to a maximum of 6 cents per kilowatt-hour, and the kilowatt-hours to be charged at the first rate remain unchanged. The number of kilowatt-hours to be charged at the second rate varies both with the class of service and the first kilowatt-hour rate. At the head of the table of rural rates at the end of this section is a schedule which shows the class of service, the number of kilowatt-hours per month to be charged for at the first rate, and the number of kilowatt-hours at the second rate according to the governing first rate.

Average Cost to Rural Consumers Decreasing

The remarkable benefits obtained by rural communities in regard to the amount charged to them during the period 1928 to 1939 is indicated in the following tables:

HAMLET AND HOUSE LIGHTING SERVICE
Classes 1B, 1C and 2A

Year	Annual revenue	Kilowatt-hours consumed	Number of consumers billed*	Average revenue per kw-hr.	Average monthly bill	Average monthly consumption, kw-hr.
	\$ c.			cents	\$ c.	
1928	530,407 00	10,702,031	17,585	4.95	2.51	50.7
1929	663,311 00	14,424,770	21,219	4.60	2.85	62.0
1930	757,558 00	17,815,987	25,013	4.25	2.73	64.2
1931	974,224 17	22,127,474	31,176	4.40	2.88	65.6
1932	1,075,081 03	24,654,386	33,638	4.36	2.76	63.3
1933	1,133,368 70	25,410,470	35,941	4.46	2.70	60.1
1934	1,149,876 67	27,768,460	37,466	4.14	2.61	63.0
1935	1,171,873 28	30,802,290	39,751	3.80	2.53	66.5
1936	1,239,010 83	35,666,241	43,014	3.47	2.49	71.8
1937	1,331,919 46	40,935,040	46,785	3.25	2.47	76.0
1938	1,439,681 39	47,612,820	52,514	3.02	2.42	79.9
1939	1,649,496 29	54,787,544	58,328	3.01	2.48	82.4

*See footnote to next table.

FARM SERVICE

Classes 2B, 3, 4, 5, 6A, 6B, 7A and 7B

Year	Annual revenue		Kilowatt-hours consumed	Number of consumers billed*	Average revenue	Average monthly bill	Average monthly consumption, kw-hr
	\$	c.			per kw-hr.	cents	
1928	569,007.00		10,969,828	9,309	5.18	4.97	96.1
1929	777,736.00		16,022,842	12,605	4.85	5.85	120.8
1930	863,805.00		20,507,063	16,011	4.21	5.03	119.4
1931	1,128,554.28		25,716,141	20,796	4.39	5.11	116.4
1932	1,255,482.13		28,675,400	22,432	4.38	4.84	110.5
1933	1,309,122.96		30,062,194	23,283	4.35	4.75	109.2
1934	1,319,922.69		33,312,314	23,882	3.96	4.66	117.7
1935	1,343,222.39		37,667,453	25,357	3.57	4.55	127.5
1936	1,385,784.39		45,447,669	28,198	3.05	4.31	141.4
1937	1,366,484.50		54,858,240	35,508	2.49	3.57	143.5
1938	1,711,788.81		67,886,882	44,565	2.52	3.56	141.3
1939	2,090,259.14		81,613,087	53,240	2.56	3.56	139.1

*It may be observed that the number of consumers reported here does not agree with those shown in other sections of the Annual Report of the Commission. This is due to the fact that the figures given here represent consumers actually billed, whereas elsewhere in the Report the tables show the number of contracts executed to the end of the fiscal year. In many cases service is not given until the following year.

Rural Loans

Under The Rural Power District Loans Act, 1930, authority was given to The Hydro-Electric Power Commission of Ontario to finance the installation of wiring and the purchase of specified electrical equipment by rural farm consumers.

To October 31, 1940, 2,377 applications had been received and of these 1,772 loans were completed. As all applications for loans are governed by regulations made subject to the provisions of the Act, it will be seen that quite a number fail to meet the requirements of these regulations.

To October 31, 1940, 792 loans had been repaid in full either through the maturing of the loan or because of the improved financial position of the borrower.

During the fiscal year ended October 31, 1940, there were received 284 applications which, with the 48 carried over from last year, were disposed of as follows:

Loans completed	247
Withdrawn	27
Did not meet requirements	6
Cheques issued but refused by applicants and cancelled	7
Not approved	40
Approved waiting final papers	5
	332

SUMMARY OF LOANS MADE TO OCTOBER 31, 1940

ELECTRICAL PASTEURIZATION AND COOLING OF MILK

Left—Electric pasteurizer, capacity 35 gallons, in use by farmer retailing milk in a small community. By use of electrical pasteurization the requirements of the Provincial Department of Health can be complied with in a safe and economical manner.

Right—Refrigerator-type of surface cooler which cools the milk from approximately 140° to 50°F., following pasteurization. Shown here mounted in conjunction with bottle filler

Respecting the 1,772 loans made to October 31, 1940, the following table shows the number of loans made for each term of years:

One year term	46	Six year term	10
Two " "	147	Seven " "	79
Three " "	430	Eight " "	9
Four " "	88	Nine " "	0
Five " "	925	Ten " "	38

During the past five years no loans were made for periods longer than five years, and during the past year no loans were granted for periods longer than three years.

SUMMARY OF RURAL LINE EXTENSIONS

As Approved by the Commission from June 1, 1921, to October 31, 1940
Constructed or Under Construction

System	Miles of primary line	Number of consumers			Capital approved for extensions	
		Hamlet	Farm etc.	Total	Total	Provincial grant-in-aid
Niagara	11,487.43	31,717	44,663	76,380	\$ 27,240,476.89	c. 13,596,958.44
Georgian Bay	2,933.83	9,711	7,604	17,315	\$ 6,287,143.95	c. 3,059,455.49
Eastern Ontario	4,494.44	12,327	13,077	25,404	\$ 10,159,299.31	c. 5,079,649.65
Thunder Bay	275.79	382	758	1,140	\$ 558,161.00	c. 279,080.50
Northern Ontario Properties	300.59	2,175	608	2,783	\$ 761,208.00	c. 380,604.00
Totals	*19,492.08	56,312	66,710	123,022	\$ 45,006,289.15	c. 22,395,748.08

*This total includes 240.97 miles of primary line under construction on October 31, 1940, and service to 664 new consumers was not completed until after the end of the fiscal year.

HYDRO DISPLAY AT INTERNATIONAL PLOWING MATCH

CLASSIFICATION OF SERVICES FOR RURAL POWER DISTRICTS

When contracts between the consumer and the township have been executed, users of power in townships are supplied with electric service under general classes, according to the requirements and conditions of the individual consumer, as follows:

Class	Service	Class demand kilowatts	Phase	Volts	Fuse rating amperes (maximum)
1B	Hamlet Lighting	1 32	1	110	20
1C	" "	2	1	220-110	35
2A	House Lighting	1 32	1	110	20
2B	Small Farm Service	2	1	220-110	35
3	Light Farm Service	3	1	220-110	35
4	Medium Farm Service	5	1	220-110	50
5	" "	5	3	220-110	35
6A	Heavy Farm Service	9	1	220-110	100
6B	" "	9	1 and 3	220-110	60
7A	Special Farm Service	15	1	220-110	According to load
7B	" "	15	1 and 3	220-110	According to load

Class 1: Hamlet Service—Includes service to customers (other than farm and power users) in hamlets, where four or more consumers are served from one transformer. Service is given under two sub-classes as follows:

Class 1-B: Service to residences or stores, including use of portable appliances, and permanently installed appliances not exceeding 1,320 watts.

Class 1-C: Service to residences or stores with electric range or ordinary permanently installed appliances greater than 1,320 watts. Where a combination of residence and store can be supplied from one service, the combination is billed as a single Class 1-C consumer. Special or unusual loads will be treated specially.

Class 2-A: House Lighting—Includes service to all consumers other than farm and power users that cannot be grouped as in Class 1.

Class 2-B: Farm Service, Small—Includes service for lighting of farm buildings, power for miscellaneous small equipment and power for single-phase motors not exceeding 2 horsepower and electric range if motors and range are not used simultaneously, on a farm of fifty acres or less.

Class 3: Farm Service, Light—Includes service for lighting of farm buildings, power for miscellaneous small equipment and power for single-phase motors not exceeding 3 horsepower and electric range if motors and range are not used simultaneously.

Class 4: Farm Service, Medium Single-Phase—Includes service for lighting of farm buildings power for miscellaneous small equipment, and power for single-phase motors up to 5-horsepower demand and electric range if motors and range are not used simultaneously.

Class 5: Farm Service, Medium 3-Phase—Includes service for lighting of farm buildings, power for miscellaneous small equipment and power for 3-phase motors up to 5-horsepower demand and electric range if motors and range are not used simultaneously.

Class 6: Farm Service, Heavy—Includes service for lighting of farm buildings, power for miscellaneous small equipment and power for motors up to 5-horsepower demand and an electric range, or 10-horsepower demand without an electric range. Single- or three-phase service will be given at the discretion of The Hydro-Electric Power Commission of Ontario.

Class 7: Farm Service, Special—Includes service for lighting of farm buildings, power for miscellaneous small equipment, power for 3-phase motors from 10- to 20-horsepower demand and electric range. Single- or three-phase service will be given at the discretion of The Hydro-Electric Power Commission of Ontario.

Note: Classes 2B to 7B are designed primarily to cover the service requirements of farmers. Consumers other than farmers who require a more comprehensive service with greater demand than is provided for in classes 1B, 1C and 2A may obtain this service upon payment of the specified service charge listed in the table of rates.

Note: Class 2B is the service usually supplied to farms of fifty acres or less and Class 3 is the service usually supplied to larger farms. More than 90 per cent of new contracts for farm service are in one or other of these classes.

 *See footnote on page 51. †Summer cottage rates. ‡See heading to first page of table.

SECTION IV

SALES PROMOTION

IN last year's report an outline was given of the changing circumstances connected with the Commission's growth and available power supplies which recently made it profitable to establish a Sales Promotion department.

Before the first year's work of the newly-formed department was completed the war had begun to change the situation again and sales promotion activities were necessarily modified to meet the new conditions.

Ontario's position as the chief industrial province of the Dominion gave added importance to the industrial and lighting services of the Commission in connection with war activities and stress was laid on assisting industry to use electrical energy in the most efficient manner and to use more of it wherever such use would contribute to greater production or better products.

This advisory service was welcomed by the municipal utilities and by industrial consumers and has assisted them to make advantageous changes in equipment or methods.

In the rural power districts effort was made to foster those uses of electricity on the farm and in rural industries that would release man-power and enable the farmer to produce greater volume at lower cost.

Industrial Work

Co-operating with the municipal Hydro utilities a total of 869 calls were made on 377 industrial plants. On the initial calls the service offered by the Commission was explained; on subsequent calls detailed attention was given to plant operations which usually resulted in suggestions for improvements to operating conditions or practice. In some plants complete surveys were made and recommendations submitted. Where the suggestions in these reports were adopted gains up to 30 per cent of efficiency in motor loading and up to 10 per cent in plant power factor were frequently made.

New tools and processes have been introduced and tried out in industrial establishments. An interesting example is the use of infra-red lamps for drying and baking processes. With the co-operation of the Commission's laboratories testing equipment has been provided and Hydro consumers

may now, at a reasonable cost, have their processes analysed to determine whether the use of these new developments would be profitable.

Domestic and Rural Activities

Co-operation with municipal Hydro utilities has been given to encourage further domestic use. Hydro Homemaker Forums were conducted in 48 municipalities, with a total of 102 sessions. The gross attendance at these schools was 39,400, or an average of 387 per school.

In the rural areas, the Hydro Display Coach was shown in 31 rural centres to a total of 12,200 consumers, and prospective users. This travelling display was also used to advantage at 15 Fall Fairs before an estimated total audience of 20,000 people.

Lighting

A substantial increase in lighting advice service was recorded. The most insistent demands for this service came from industries being adapted to war work and from schools.

The necessity for good lighting for efficient war material production is well recognized. Many problems in industrial lighting were solved during the year; most of them on an emergency basis requiring fast service. A total of 65 industrial establishments for war supplies were given lighting surveys followed by recommendations for improved lighting equipment.

Improvements in lighting and wiring followed reports on 268 schools, most of which adopted the suggestions made. The interest of rural school boards has been exceptional, and has resulted in the installation of adequate lighting in a large number of country schools.

During the year, the Lighting section issued 833 reports, with a recommended increase in lighting load of 5,905 kilowatts.

Advertising

The Commission's advertising programme, following that established in the previous year, was divided into four different classifications: institutional, domestic, rural and industrial.

A type of institutional advertising copy was inaugurated dealing with the work of Hydro and electric power supply in aid of the war effort, and emphasizing its vital and important position. In the industrial advertising field, stress was laid on new applications of electricity, and on the value of adequate lighting to munition industries.

The media selected for this advertising campaign were such as to ensure maximum coverage at lowest cost. An analysis of circulation of the various publications used assures that the advertisements reached nearly every home, farm, and industry in the Province.

A number of bulletins and pamphlets were prepared and issued, dealing with domestic and rural applications. These were advantageously used by municipal Hydro utilities to develop increased uses of energy in these markets.

Representative group of advertisements used in sales promotion work during 1940

Sales of Lamps and Equipment

The sale of electrical supplies and equipment including water heater material, to Hydro municipal systems has amounted during the year, to a total of \$414,676, an increase of \$180,900 over the previous year. The distribution of Hydro lamps to Hydro systems was well maintained, and the total sales during the year show a substantial increase.

General Comments

Since the work of the Sales Promotion department has been so largely concentrated on assisting war services, it is difficult to enumerate the load increases attributable directly to sales promotion activities. However, it can confidently be stated that an increase in energy supply of 25,000,000 kilowatt-hours resulted, providing a continuing annual increase in revenue of approximately \$375,000 to the municipal systems.

During the coming year, the war service work will be continued and augmented.

SECTION V

HYDRAULIC ENGINEERING AND CONSTRUCTION

DURING 1940 the situation respecting power supplies to meet growing Hydro loads made it necessary to do preliminary work on certain new developments and to investigate other power sources. At the Ear Falls development in the Patricia-St. Joseph district of northern Ontario, No. 3 unit was completed. In July, work commenced on the construction of the Big Eddy development on the Musquash river to serve the Georgian Bay system, and in September the Barrett Chute development on the Madawaska river to serve the Eastern Ontario system was started.

NIAGARA SYSTEM

Hydraulic engineering investigations and studies in connection with potential sources of additional power for the Niagara system were chiefly concerned with two matters—the proposed peak load plant at DeCew Falls and the diversion of northern waters to the Great Lakes.

DeCew Falls Peak Load Plant

The existing DeCew Falls plant, which supplies power to the Dominion Power and Transmission division of the Niagara system, has a capacity of about 50,000 horsepower, generation being at a frequency of 66-2/3 cycles. The plant supplies power to a number of municipalities in the Niagara peninsula, and is necessarily separate from the 25-cycle supply also given in that district. The D. P. and T. division is connected with the 25-cycle system by a frequency-changer set at Niagara Falls, through which a peak supply of about 10,000 horsepower may be introduced into the division to supplement the output of the DeCew Falls plant.

During recent years, many municipalities and customers formerly supplied at a frequency of 66-2/3 cycles have been transferred to the 25-cycle system, but the natural load growth of the remaining customers in the D. P. and T. division has been approximately equal to the reduction effected by these transfers. It is necessary, therefore, to maintain the present plant in operation while the proposed new plant is being built.

The DeCew Falls plant receives its water supply from lake Erie through the Welland ship canal, and has large storage basins to enable the uniform supply from the canal to be used at a varying rate suited to the fluctuating daily load demands in the division. Prospective increases in the peak-load demands on the 25-cycle system and the probability that additional supplies of water would be made available for generation of power in the locality have prompted a series of investigations of the manner in which an extension or reconstruction of this plant might be used effectively in the 25-cycle system. The problem is complicated considerably by the high state of development of the terrain through which structures and channels for the conveyance of water must be built, and also by the necessity of maintaining the present plant in service for some time.

The investigations indicate that it may be possible ultimately to build a plant here having a peak capacity of 200,000 horsepower in four 25-cycle units of 50,000 horsepower each, involving the discontinuance of 66-2/3-cycle generation in the final stage. It is probable that the capacity of storage basins will be increased somewhat and that, for the complete development, extensive works will be required in Twelve Mile creek and in the old Welland canal from St. Catharines downstream, through which the water discharged from the plant must flow to reach lake Ontario.

At the Queenston plant a programme of work on the cliff to provide effective protection to the plant has been instituted. Cyclopean rip-rap was placed to protect the bank of the Niagara river along the power-house railway, some distance downstream from the power house.

Long Lake and Ogoki Diversions

The Long Lake diversion project was used in 1940 for the transportation of pulpwood from the Kenogami watershed to lake Superior. Following the understanding reached with the United States respecting the use of waters to be diverted into the Great Lakes by Canada, the diversion of the flow of a part of the Kenogami river to the Great Lakes system, via Long lake, was brought into operation. Careful consideration has been given to the procedure to be used for accurately measuring the amount of water diverted.

Surveys, investigation of foundation conditions and office studies were continued in connection with the Ogoki diversion project, and preliminary designs have proceeded to the extent necessary to permit commencement of construction of the works required for the project.

GEORGIAN BAY SYSTEM

The load demands of this system have continued to grow rapidly and, in spite of the installation last year of a second frequency-changer set at Hanover, having a capacity of 7,250 kilowatts, it became necessary to commence construction of a second plant on the Musquash river. Between lake Muskoka and Georgian bay there are on the Musquash river five possible power concentrations. One at Bala is partially developed at present, a second at Ragged Rapids was completed during 1938, and construction has commenced at the third at Big Eddy, about four miles below Ragged Rapids.

DECEW FALLS DEVELOPMENT

Valley of Twelve Mile Creek, the tailrace channel of the development; showing St. Catharines beyond Glen Ridge bridge

BIG EDDY DEVELOPMENT — MUSQUASH RIVER

Power-house excavation at Big Eddy pool—December 3, 1940

Big Eddy Development

The Big Eddy plant will operate under a head of about 36 feet,—the headwater approximating the tailwater level at Ragged Rapids—and will contain two generating units, the turbines being of the propeller type with a rated capacity of 4,950 horsepower each. Work commenced in July 1940, the first item of construction being a roadway, about four miles long, from the Ragged Rapids development to the area close to the new power-house site. By the end of the fiscal year, temporary camps had been constructed at Big Eddy, and earth and rock excavation for the canal and for the power house had commenced.

Certain studies were made concerning possible future developments at other sites on the South Muskoka and Musquash rivers.

EASTERN ONTARIO SYSTEM

Barrett Chute Development

Major activities in the Eastern Ontario system were in connection with the development commenced at Barrett Chute on the Madawaska river. Barrett Chute is one of seven new developments projected on this river, and is situated immediately above Calabogie lake about 31 miles from Arnprior. The development will concentrate at this point a total fall of 154 feet occurring under natural conditions in some five miles of the river, and will comprise a concrete dam across the river channel above High falls and a power canal, 38 feet wide and 2,000 feet long, extending from the pool above the dam to headworks some 600 feet from the shore of Calabogie lake. From the headworks, two steel penstocks, 14 feet in diameter and 550 feet in length will extend to two units in the power house, each having a rated turbine capacity of 28,000 horsepower, giving a plant rating of 54,000 electrical horsepower. The turbines will have single, vertical, Francis type runners in steel-plate casings, and discharge through elbow-draft tubes. They will run at 164 r.p.m. and generate their rated output under a head of 150 feet.

At the same time as the development is under construction, storage facilities on the river will be increased by building a concrete and earth fill dam at Bell rapids to raise the level of Bark lake some 25 feet and to provide storage capacity therein for 215,000 acre-feet, which may later be increased to 270,000 acre-feet by raising the lake an additional five feet.

Before a decision was made as to the appropriate capacity for the Barrett Chute plant and the required increase in storage facilities, a thorough study was made of the relation of the Madawaska sites to the rest of the Eastern Ontario system and, in fact, their place in the power supply for the whole of southern Ontario. These investigations indicated that it was feasible and desirable to provide for capacities at the various sites on the river considerably greater than those which would be warranted if they were isolated from other power sources.

BARRETT CHUTE DEVELOPMENT — MADAWASKA RIVER

The chute on the Madawaska River from which the development derives its name

BARRETT CHUTE DEVELOPMENT — MADAWASKA RIVER

Canal excavation, near canal intake — December 14, 1940

The Eastern Ontario system which operates at 60 cycles receives its power supply, in part, from hydro-electric developments on the Trent, Mississippi, Madawaska and other rivers; in part, from Quebec power sources by purchase; and, in part, also from the 25-cycle Niagara system through the Chats Falls frequency-changer. Investigations indicated that it would be advantageous to conserve the water stored in the Madawaska storage basins through certain of the spring, summer and early fall months by transferring through the frequency-changer at Chats Falls a larger amount of power than has been customary in the past, in those months when surplus capacity exists in the Niagara system.

As an isolated plant, the Barrett Chute development would probably be capable, with suitable storage facilities, of carrying a load of 36,000 horsepower. Because of the variation in load demands throughout the year and the arrangements for transfer of power from one system to another, it was determined that the optimum capacity for the site was about 54,000 horsepower. The economic capacity of other sites on the river is similarly increased over that anticipated some years ago, when the river was studied separately. Upon the complete development of the river, an additional supply of approximately 150,000 horsepower will be obtained from six sites at present undeveloped. Additional storage of some 200,000 acre-feet will also ultimately be constructed.

Construction commenced on the Barrett Chute development in September 1940, the first work being the betterment of an existing road and the building of approximately three miles of new road between Calabogie and the power site. By the end of the calendar year the road to the site was completed, temporary camps were being erected, and earth excavation had commenced. At the same time, some of the preliminary work had begun on the improvement of the road from Barry bay to the Bark lake dam.

Preliminary studies were made in connection with other power sites on the Trent and Mississippi rivers.

THUNDER BAY SYSTEM

In the Thunder Bay system work was confined to field investigations of the flow of the Nipigon river; estimates and studies of additional installations at Cameron Falls and Alexander plants; a new development at Pine Portage and other sites, and the relation of the proposed Ogoki diversion to these sites.

NORTHERN ONTARIO PROPERTIES

Sudbury and Nipissing Districts

Field investigations were made of the flow in the Sturgeon and Wanapitei rivers, with a view to improving the efficiency of the use of water at the Crystal Falls plant on the former, and at the Coniston, Stinson and McVittie plants on the latter. In the case of the Wanapitei river plants, the investigations had also in mind the possible increase in capacity of the plants by reconstruction of certain units and installation of additional units.

BARRETT CHUTE DEVELOPMENT — MADAWASKA RIVER

Power-house site in foreground, on shore of Calabogie Lake

UNDEVELOPED POWER SITE ON FRENCH RIVER

Looking downstream past middle pool, to lower obstruction at power-house site

Abitibi District

Surveys in considerable detail were made for a power site at Five Mile rapids on the French river. At this site a head of about forty feet may be developed, the forebay at the proposed development being slightly below the level of lake Nipissing. The survey included the taking of topography along the intricate courses of the river from the power site to lake Nipissing and, in greater detail, at power-house and dam sites. Continuous records of water levels were obtained at certain key points for the determination of hydraulic gradients and flow distribution in the various channels.

The French river site has certain advantages if used in connection with the 25-cycle Abitibi district, as it will be possible to draw on the water stored in lake Nipissing, through those months when the water supply in the Abitibi river is deficient. Used thus, as an integral part of the Abitibi district, the site may be developed for possibly 25,000 horsepower. Its capacity, if used independently or as a part of the 60-cycle Sudbury district, would be very much less than this.

Surveys and studies continued in connection with power sites on the Mississagi river.

Patricia-St. Joseph District

At the end of 1939, the third unit in the Ear Falls plant was approaching completion; it was brought into service in January 1940. The new unit consists of a vertical turbine, rated at 7,500 horsepower at 36 feet of head, with automatically adjustable blade runner of the Kaplan type, directly connected to a 6,000-kv-a. generator. The Ear Falls plant, which is described in some detail in the last Annual Report, now has an installed capacity of 17,500 horsepower.

Preliminary investigations were also made in connection with the Manitou Falls power site some fifteen miles downstream from Ear Falls plant, and on possible channel improvements at Manitou chutes lying between the two power sites.

HYDRAULIC INVESTIGATIONS

The growth in the number of water power developments owned and operated by the Commission; the more complete utilization of the individual sites; the development of additional storage and particularly the interconnection of developments on different watersheds have made the collection and analysis of hydrometric data of much greater importance and value. Systematic collection and study of data relating to the flow of streams, the topography, forest cover and storage possibilities of their watersheds and detailed information respecting lakes and power sites, is essential to the efficient operation of existing power plants and the most economical design of future developments. To be of maximum value these data must extend continuously over many years. Their lack is a serious handicap. The Commission has given increasing attention to this matter during recent years as a routine administrative feature of its Hydraulic Engineering department.

SECTION VI

ELECTRICAL ENGINEERING AND CONSTRUCTION

CONSTRUCTION work proceeded on an extensive scale in the co-operative systems during 1940 and was also active in the Northern Ontario Properties. The rapid growth in industrial load originating with the production of munitions and other war necessities, together with a growth in domestic and commercial demand stimulated by these activities, required engineering studies and careful planning for efficient power supply. This planning involved the rearrangement of certain distributing circuits and the advance purchase of transformers and oil circuit-breakers which require considerable time to produce, in order to ensure availability of such equipment for war load installations which in many cases are of an emergent nature.

At the end of this section is given a tabulation of the transformer and distributing stations where major construction work affecting the transformer capacity was undertaken and to a large extent completed during the fiscal year. At other stations similar work is under way and scheduled for completion in 1941.

Besides changes in transformer capacity important work of a less extensive nature in both the generating and transformer stations of the Commission was carried out where required, such as the installation of additional switching equipment, improved relaying and protective equipment and larger capacity metering equipments.

Transmission line construction in 1940 centred around the industrial communities of southern Ontario. In the previous year it had centred around the mining communities of northern Ontario. In all, 281 miles of new transmission lines were placed in service and extensive revisions and improvements were made in existing lines.

The largest single item of transmission line expenditure was on the 220,000-volt steel tower line from the Ontario-Quebec boundary near the St. Lawrence to serve the Toronto and Hamilton areas. This line was 40 per cent completed in 1940 and is scheduled to be placed in service in 1941.

Two maps at the back of this report show the transmission lines and stations of the Commission in the co-operative systems and Northern Ontario Properties. A tabulation of transmission line mileage placed in service

during the fiscal year is given at the end of the section, together with a brief summary of the more important projects completed during the year.

Co-operative Systems

On the Niagara system the three transformer stations under construction in 1939 were completed and placed in service during the year. One of these is Toronto Fairbank, a 50,000-kv-a transformer station located in the northwest section of the city; another is Allenburg transformer station, 67,500-kv-a capacity and located at Ontario Paper Company's plant at Thorold; the third is Norfolk transformer station, 6,000-kv-a capacity, near Simcoe.

Among the transformer stations included in the tabulation but which were not completed in 1940 is one being constructed at Burlington for the supply of additional power to the Niagara system at 110,000 volts from sources in Quebec and eastern Ontario over 220,000-volt circuits. Designs are being prepared for a station with an ultimate capacity of 450,000 kv-a. The site has been purchased and construction work was started in November 1940. Most of the equipment for the initial installation has been purchased and is expected to be placed in service by June 1941. This initial installation will consist of two 75,000-kv-a transformer banks with a spare unit and two voltage-regulators. The transformers are rated 25,000-kv-a, 25-cycle, single-phase 220,000/110,000 13,200-volt, forced-air-cooled and the voltage-

TORONTO-FAIRBANK TRANSFORMER STATION

St. Thomas to Windsor

regulators are rated 75,000-kv-a (circuit-capacity), 25-cycle, three-phase, 110,000-volt, self-cooled, for a maximum voltage regulation of 15 per cent.

At Hamilton a two unit 50,000-kv-a transformer station similar to Toronto-Fairbank is under construction. One of the units has already been placed in service. Additional transformer capacity was installed and placed in service at Toronto-Bridgman, St. Thomas, St. Clair, Brant and Woodstock transformer stations.

In July 1940, the new 110,000-volt single-circuit line on steel towers between St. Thomas and Windsor, 103 miles, was placed in service. This line, which has a capacity equal to the other two existing lines on double-circuit towers, has greatly improved operating conditions of the western section of the Niagara system.

TRANSMISSION LINES IN TORONTO — NIAGARA SYSTEM

Narrow-base towers on 110,000-volt line from St. Clair Avenue junction to Toronto-Fairbank transformer station

Substantial progress was made on the construction of a new 220,000-volt line which, when completed, will extend from the eastern boundary of the Province, the Quebec border, to the new transformer station at Burlington. At the end of the fiscal year about 150 miles of towers and footings had been erected and 75 miles of steel-reinforced aluminum conductor had been strung.

In the Georgian Bay system at Hanover frequency-changer station an additional frequency-changer of 6,750 kv-a capacity was installed. It is operated in parallel with the original 5,000-kv-a unit for the interchange of power with the Niagara system. Two 5,000-kv-a generating units have been purchased for the power development now under construction at Big Eddy on the Musquash river. A 6,000-kv-a distributing station was in-

TRANSMISSION LINES — EASTERN ONTARIO SYSTEM
Standard tower on 110,000-volt line from Frontenac to Sidney

stalled and a 37-mile high-voltage transmission line was constructed for the supply of power to a munitions plant. Increased transformer capacity was provided in 12 distributing stations.

In the Eastern Ontario system a new 3,000-kv-a transformer station was constructed to supply power to the National Research Council at Ottawa, and an adjacent rural power district. The capacity of the Ottawa transformer station was increased by the installation of an additional bank of three 5,000-kv-a transformers, and additional transformer capacity was provided at many distributing stations. Many sections of the high-voltage network were strengthened by the construction of new lines and the rehabilitation of certain sections.

Northern Ontario Properties

The third generator unit, 6,000-kv-a capacity, was placed in service at Ear Falls development in the Patricia district. Additional transformer capacity was installed at Ramore, Timmins, Larder Lake and Pamour transformer stations in the Abitibi district. The re-insulation of the transmission circuit from Crystal Falls generating station to Coniston generating station for 110,000-volt service was completed and an 8,000-kv-a, 3-phase step-up transformer installed at each end to effect a tie-in to the original circuits. More than 43 miles of transmission circuits were erected throughout the various districts.

Rural Power Districts

The rural power lines throughout all the systems were extended approximately 1,550 miles for the supply of power to the rural districts; 570 miles of these extensions were in Niagara system; 366 miles in Georgian Bay system; 405 miles in Eastern Ontario system; 82 miles in Thunder Bay system and 127 miles in Northern Ontario Properties.

Office Building

Ten additional office floors and two penthouse floors were added to the Commission's six-storey office building on University avenue, erected in 1934. The enlarged office space will relieve the crowded condition that

DISTRIBUTION STATION NO. 3 — EAST YORK
A unit type station with site improvements

RURAL DISTRIBUTION STATION — PERTH
A standard rural type station

exists in the present offices and accommodate that portion of the head-office staff that has been housed in other buildings. The construction work was started in March and will be completed early in 1941. Most of the staff will, however, be in their new quarters by December 1940.

Distribution Lines

At the end of this section is a tabulation of the mileage of distribution lines constructed by the Commission in rural power districts, and the number of consumers served. The capital investment in these rural power districts at October 31, 1940, was approximately \$36,600,000.

In addition to the extensions in connection with rural electrical service, the Commission during 1940 extended power lines to serve aerodromes established in connection with the Empire training plan and constructed distributing systems on the aerodrome sites.

The lighting of the Queen Elizabeth dual highway was extended. Installations were completed from the western limits of Toronto to Brown's Line, from Burlington to Burlington Beach and from Burlington Beach to the vicinity of Niagara Falls. The total mileage added during the year was 41.6 miles. Construction work was also commenced on the 16-mile section between Oakville and Hamilton.

A number of highway traffic signals were installed in various parts of the Province.

**TRANSMISSION LINE CHANGES AND ADDITIONS MADE DURING YEAR
ENDED OCTOBER 31, 1940**

NIAGARA SYSTEM

High-Voltage Lines

A 110,000-volt, single-circuit, steel-tower line was built from St. Thomas transformer station 103 miles to Essex transformer station.

A 110,000-volt, single-circuit, wood-pole line was built from Vanessa junction 7.4 miles to Norfolk transformer station.

A 110,000-volt, double-circuit, steel-tower line was built from St. Clair Avenue junction 2.8 miles to Fairbank transformer station.

A 60,000-volt, single-circuit, wood-pole line was built from Dainville junction 1.28 miles to Welland transformer station.

Two suspension towers and one lattice steel pole were installed near Gage avenue in Hamilton to provide a tap for Hamilton-Gage transformer station in the 110,000-volt line from Hamilton-Beach transformer station to Hamilton-Stirton transformer station..

Tower No. 50 of the Queenston-Hamilton line was moved back from the bank of the Welland canal to a more solid footing.

Tower No. 327 of the Niagara-Welland line was relocated to provide clearance for new buildings of the United Steel Corporation.

The disused former Toronto and Niagara Power Company towers from Silverdale approximately 10 miles to Oxleys was restrung and put into service at 44,000 volts as part of the line from DeCew Falls to Bartonville.

A 60,000-volt, single-circuit, wood-pole line, temporarily operating at 12,000 volts, was built from a point in the former Toronto Power Company line in Stamford township 1.6 miles to the Welland Chemical Works Limited.

Low-Voltage Lines

NIAGARA DISTRICT: Sections of the 12,000-volt line between Lionite junction and Niagara-on-the-Lake were relocated and parts were restrung. The greater part of the section between St. Davids distributing station and Niagara-on-the-Lake was converted to pole-top-pin construction.

A 12,000-volt emergency circuit was built from Queenston generating station 2.3 miles to Whirlpool junction.

DUNDAS DISTRICT: A 26,400-volt line was built from Decewsville distributing station 7.3 miles to Rainham distributing station.

A 26,400-volt line was built from Rainham junction 7.7 miles to Jarvis airport for the Dominion Government.

TORONTO DISTRICT:—A 26,400-volt line was built from Newmarket distributing station 4.3 miles to Sharon distributing station, replacing the former circuit.

A 26,400-volt line was built from Bendale junction 3.9 miles to Agincourt distributing station.

A 26,400-volt line was built from Lawrence Avenue junction 5.0 miles to de Havilland Airport distributing station.

A 13,200-volt line was built from Wardin Avenue junction 2.1 miles to Fallingbrook distributing station.

A 26,400-volt line was built from Park Avenue junction 3.2 miles to York Mills distributing station.

The 13,200-volt line from Leaside transformer station 0.9 mile to Sun Brick distributing station was restrung and reinsulated for 26,400-volt operation, and a new 26,400-volt line was built from Sun Brick distributing station 0.7 mile to East York distributing station No. 1, and from East York distributing station No. 1, 0.7 mile to East York distributing station No. 3.

STRATFORD DISTRICT:—The 26,400-volt line from Stratford transformer station 9.7 miles to Tavistock distributing station was converted to pole-top-pin construction.

WOODSTOCK DISTRICT:—The 13,200-volt line from Beachville distributing station 6.0 miles to Embro distributing station was reinsulated for 26,400 volts.

The 13,200-volt line from Norwich junction 4.6 miles to Norwich distributing station was reinsulated for 26,400 volts and converted to pole-top-pin construction.

BRANT DISTRICT:—The 26,400-volt line from Vittoria junction 8.5 miles to St. Williams distributing station was converted to pole-top-pin construction.

A 26,400-volt line was strung on existing rural poles from Vittoria junction 0.7 mile to Vittoria distributing station.

The 26,400-volt line from Burford distributing station 3.1 miles to Canadian Aggregates Limited was removed.

A 26,400-volt line was built from Consolidated Sand and Gravel junction 0.7 mile to Consolidated Sand and Gravel Company for that Company.

A 26,400-volt line was built from Norfolk transformer station 0.6 mile to Lynnville junction, and from Norfolk transformer station 2.6 miles to the Lake Erie and Northern Railway Company at Simcoe, while the existing line from this point to Simcoe municipal station was rebuilt.

KENT DISTRICT:—A section of the 26,400-volt line from Prince Albert junction to Blenheim distributing station was relocated.

ESSEX DISTRICT:—The 26,400-volt lines from Amherstburg junction 21.5 miles to Comet distributing station and Kingsville distributing station were fitted with new hardware, and re-sagged.

YORK DISTRICT:—A 13,200-volt line was built from York transformer station 1.3 miles to Kingsway distributing station.

The 26,400-volt line from Kleinberg distributing station 5.1 miles to Bolton distributing station was converted to pole-top-pin construction.

A 26,400-volt line was built from Malton distributing station 0.3 mile to Canadian Associated Aircraft Limited.

HAMILTON DISTRICT:—A 13,200-volt line was built from Hamilton Beach transformer station 1.3 miles to Windermere junction, so that Grimsby distributing station and Beamsville distributing station are now fed from Hamilton Beach transformer station.

A 13,200-volt line was built from Smithville distributing station 1.1 miles north to former Dominion Power and Transmission Company lines, so that Smithville is now fed from Hamilton Beach transformer station.

A 13,200-volt line was built from Hamilton Beach transformer station 1.0 mile to the former Dominion Power and Transmission Company lines, so that Bartonville distributing station is now fed from Hamilton Beach transformer station.

ST. CLAIR DISTRICT:—A 26,400-volt line was built from Wanstead junction 8.1 miles to Watford junction.

TORONTO AND FAIRBANK DISTRICT:—A 26,400-volt line was built from Fairbank transformer station 1.3 miles to Forest Hill municipal station.

A 26,400-volt line was built from Fairbank transformer station 1.4 miles to Glencairn distributing station.

A 26,400-volt line was built from Fairbank transformer station 2.7 miles to Kodak junction.

PORT COLBORNE DISTRICT:—A 13,200-volt line was built for Robin Hood Flour Mills Limited from their plant 0.6 mile to the Welland canal to connect with cable under the canal and a former Dominion Government-owned line to Killaly junction.

WELLAND DISTRICT:—A part of the 12,000-volt double-circuit line from Electro Metallurgical Company 0.5 mile to Canada Steel junction was converted to single-circuit construction and restrung with heavier conductor.

A 12,000-volt circuit was strung from the Electro Metallurgical Company of Canada on the existing 46,000-volt line from Welland transformer station 0.4 mile to Union Carbide junction.

ALLANBURG DISTRICT:—The 12,000-volt, double-circuit line between the Ontario Paper Company and Port Robinson distributing station was converted to single-circuit construction, and was relocated from Welland canal junction 1.1 miles to Port Robinson distributing station. This line, together with the line from Port Robinson junction to Fonthill distributing station and the newly-built line from Allanburg transforming station 0.3 mile to Best Yeast Limited, are now energized from Allanburg transformer station and constitute a new operating district.

NIAGARA DOMINION DISTRICT:—The former Dominion Power and Transmission Company and the former Toronto and Niagara Power Company circuits between Niagara Falls and Hamilton were connected by the construction of four 44,000-volt taps at Windermere junction, Red Hill junction, Escarpment junction and Smithville junction, as noted under Hamilton district above.

GEORGIAN BAY SYSTEM

High-Voltage Lines

A 38,000-volt, single-circuit, wood-pole line was built from Ragged Rapids generating station 37.2 miles to the plant of Canadian Industries Limited at Nobel for that Company.

The former 22,000-volt line from Stayner junction 1.5 miles to Stayner distributing station was restrung and reinsulated for 38,000-volt operation.

One of the 22,000-volt circuits on the existing line from Eugenia 34.3 miles to Hanover was reinsulated for 38,000-volt operation.

EASTERN ONTARIO SYSTEM

High-Voltage Lines

A 110,000-volt, single-circuit, wood-pole line was built from Frontenac transformer station 1.5 miles to the Aluminum Company of Canada.

A 110,000-volt, single-circuit, wood-pole line was built from Chats Falls 29 miles to Federal junction, from Federal junction 8.9 miles to Cyrville junction, and from Cyrville junction 11.4 miles to Lievre junction.

A 110,000-volt, single-circuit, steel-tower line was built from Frontenac transformer station 56.1 miles to Sidney transformer station.

A 110,000-volt, single-circuit, wood-pole line was built from Sidney transformer station 3.0 miles to Newcombe junction, while the 44,000-volt, single-circuit, wood-pole line from Newcombe junction 34.6 miles to Welcome junction and from Welcome junction 28.1 miles to the former Oshawa Boulevard junction was rehabilitated and reinsulated for operation at 110,000 volts. Provision is thus made for a 110,000-volt line which will be placed in service next year from Trenton transformer station 65.7 miles to the new Oshawa transformer station.

Low-Voltage Lines

Additional storm guys were added to many lines in the Central, Rideau, and St. Lawrence districts.

NORTHERN ONTARIO PROPERTIES

ABITIBI DISTRICT:—The relocation of Timmins transformer station necessitated a diversion of part of the 132,000-volt, double-circuit, steel-tower line from Tisdale junction to Timmins transformer station.

A 13,200-volt line was built from Kirkland Lake transformer station 1.2 miles to Lakeshore Mines Limited.

A 13,200-volt line was built from Golden Gate Mining Company 0.8 mile to Crescent Kirkland Gold Mines Limited.

A short portion of the 26,400-volt line from Simpson Lake junction 1.4 miles to Ankerite junction was relocated.

PATRICIA-ST. JOSEPH DISTRICT:—A 44,000-volt, single-circuit, wood-pole line was built from Couchenour-Willans distributing station 1.0 mile to McMarmac Red Lake Gold Mines Limited.

A 44,000-volt, single-circuit, wood-pole line was built from Uchi switching station 42.0 miles to Jason Gold Mines transformer station.

TELEPHONE LINES—ALL SYSTEMS

In the Niagara system, portions of the line from Dundas transformer station to Guelph transformer station, 8.8 miles in length, were rebuilt. Between Allanburg junction and Dundas transformer station, 14.9 miles of the AA line were removed. This was replaced by 14.5 miles of new line located to the south of the former A line.

Part of the line was rebuilt from London transformer station 2.2 miles to St. Thomas transformer station. Part of the line was rebuilt from Woodstock transformer station 1.9 miles to London transformer station.

A double-circuit line was erected on 26,400-volt transmission line poles from Fairbank transformer station 4.7 miles to York Mills distributing station, with single-circuit taps of 0.5 mile to Forest Hill and Glencairn distributing stations. A single-circuit line was erected from Fairbank transformer station 2.5 miles to Kodak junction. A 34-pair, paper-insulated, lead-covered cable was erected from Fairbank transformer station 3.4 miles to Toronto-Wiltshire transformer station. An additional circuit was provided from York Mills distributing station 24.8 miles to Newmarket distributing station, including a new portion of line from Morgan avenue junction 8.3 miles to Elgin Mills.

A single-circuit line was erected on 26,400-volt transmission line poles from Norfolk transformer station 0.6 mile to a tap on the Delhi line. A single-circuit line was erected on 26,400-volt transmission line poles from Norfolk transformer station 2.7 miles to the Lake Erie and Northern Railway substation and to Simcoe municipal station.

Telephone line carrier installations were made for operation between Leaside transformer station and Belleville transformer station, Belleville transformer station and Chats Falls generating station, and Dundas transformer station to Eugenia generating station.

In the Georgian Bay system, conductor was replaced from Midland distributing station 3 miles to Penetang distributing station and from Berkeley distributing station 14.3 miles to Kilsyth junction.

An additional circuit was erected on transmission line poles from Bradford junction 24 miles to Fergusonvale junction, together with the replacement of telephone conductor from Bradford junction 11 miles to Bradford distributing station.

In the Thunder Bay system, new telephone line carrier equipment was installed for operation between Port Arthur transformer station and Cameron Falls generating station.

In the Northern Ontario Properties, a new single-circuit line was erected on transmission line poles from Uchi switching station 42 miles to Jason Gold Mines.

DISTRIBUTION LINES AND SYSTEMS

IN RURAL POWER DISTRICTS

The following tabulation shows the mileage of distribution lines constructed by the Commission in rural power districts and the number of consumers served.

The summary indicates a total construction during the year of 1,545 miles of new primary line completed and giving service to 10,827 additional consumers.

SUMMARY OF CONSTRUCTION IN RURAL POWER DISTRICTS

System and district	At October 31, 1939		At October 31, 1940

SECTION VII

TESTING—RESEARCH—INSPECTION

PRODUCTION AND SERVICE

THE Laboratories have been more active than usual in nearly all sections in carrying on research work and investigations, in routine testing, in factory inspection of electrical equipment being purchased by the Commission or the municipalities, and in examination and testing of devices and fittings in the interest of public safety.

The Research Committee, organized in 1933, directs the work of sixteen subcommittees each of which is studying some specific practical problem related to the design, construction, operation or maintenance of the power systems. These subcommittees have been very effective in developing new ideas and in improving the characteristics of various materials and equipment. A new subcommittee, formed during the year, will study methods of suppressing radio interference from power lines.

In 1940, a change of great importance was made in the method of carrying on the approvals testing of electrical equipment. On May 1, the Canadian Engineering Standards Association assumed responsibility for this work, and since that date all correspondence and negotiations regarding approvals testing of electrical equipment in Canada has been carried on by the Association. The name of The Hydro-Electric Power Commission of Ontario is no longer used in this connection.

In view of the importance of this change, a brief history of the steps leading to it is given.

The Commission organized its Approvals Laboratory about 1918 for the purpose of carrying on testing only in Ontario. Its activities were, however, considerably expanded when the first edition of the Canadian Electrical Code appeared in 1927 and it undertook work for other provinces at their request, so that for the past ten or more years it has carried on approvals testing and factory re-examination in all parts of Canada and also for a large number of United States manufacturers who applied for approval under the terms of the Canadian Electrical Code. This condition appeared undesirable from the point of view of national acceptance of approvals regulations, and in 1938 a conference of provincial inspectors from all provinces passed a resolution requesting the Canadian Engineering Standards

Association to assume responsibility for the approval of electrical equipment. With this resolution the Commission agreed and when the task was accepted by the Canadian Engineering Standards Association the Commission's officials, in conjunction with representatives of the Canadian Engineering Standards Association and the National Research Council, gave every assistance in working out the details connected with the change. On May 1, 1940, the transfer of responsibility was officially made and the new order has been accepted by electrical inspection departments and industry in general with enthusiasm.

The Canadian Engineering Standards Association organized a special Approvals division which will be financed entirely from the approvals fees and will not be a charge on other standardization work of the Canadian Engineering Standards Association. The administration of the division is in the hands of an administrative board of three members, the chairman being the chief testing engineer of The Hydro-Electric Power Commission, the secretary being the secretary of the Canadian Engineering Standards Association; the third member is the engineer in charge of the electrical laboratories of the National Research Council. In order to secure the necessary contacts with and support from the provinces, an Approvals Council, which is an advisory body, was also formed consisting of the chief electrical inspector in each province.

The Commission's Approvals Laboratory still carries on most of the testing and inspection work as an agent of the Canadian Engineering Standards Association. Consequently, the transfer of responsibility has involved little change either in the staff or equipment of the Approvals Laboratory.

The Approvals Laboratory and Electrical Inspection department have co-operated throughout the year to render important service in testing various types of appliances, wire and wiring devices, and in inspecting installations to insure protection against fire and electric shock. Due partly to this activity, electrical accidents in the Province have been few.

The photographic, blueprinting and photostat department, the production and service department, machine shop, carpenter shop and garage also have completed a large number of orders for the various types of work that they handle for other departments.

TESTING AND RESEARCH LABORATORIES

Routine and General Testing

The Laboratories each year conduct a large number of routine tests on different types of material and equipment, and inspect various work for the Commission and for municipalities during construction in the manufacturer's plants and erection in the field. These services are maintained to insure the highest quality in material and workmanship in order that the equipment will be satisfactory in characteristics and in operation, with a minimum of maintenance and expense, and that power interruptions will be avoided as far as possible.

Materials and Equipment Inspection

Transmission Line Materials

The inspection of transmission line materials which pass through Strachan avenue stores has included crossarms, brackets, insulator pins, clamps of various types, general hardware, wire and cable. The amount of copper wire, steel-reinforced aluminum and galvanized steel cable inspected was 4,058 tons, about fifty per cent more than last year. A large number of vibration dampers for the new Beauharnois power line also were inspected.

Electrical Equipment

Electrical factory inspection included 214 power transformers, having total capacity of 371,850 kv-a, which was a larger number and more than twice the transformer capacity inspected in the previous year. Nearly seven times as many oil circuit-breakers were inspected with an increase of 26 per cent in total capacity, and 6,155 disconnecting switches, totalling 16,988,000 kv-a, nearly eleven times the circuit-breaker capacity inspected last year. Distribution transformers amounted to 2,900; line and bus insulators increased to the total of 352,950 units. Metal-clad switchgear for several installations was given detail inspection at the factories.

Gradient tests were made on about 3,500 transformer and oil-circuit breaker bushings in position and those showing abnormal conditions were removed and reconditioned.

Routine tests were made in the Laboratories on 5,644 pairs of linemen's rubber gloves, 2,776 samples of insulating oil, 1,680 instrument and distribution transformers, 261 thermostats and 10,000 insulators, a large increase over last year in nearly all items. Miscellaneous safety equipment also was tested. Watthour meters repaired and checked numbered 2,674 and 154 indicating instruments were calibrated.

Mechanical and Structural Equipment

The mechanical equipment inspected included ten oil-storage tanks, one heating boiler, and ten street car axles. Structural equipment included 433 window sashes. In addition, various other items of equipment for generating, transformer and switching stations were inspected. The fabrication of tanks and other parts for transformers and oil circuit-breakers, and housings for metal-clad switchgear and unit substations has been followed through the factories. Special attention was given to welding and painting.

Concrete

Three resident concrete inspectors and three part time assistants were stationed on two construction jobs. These inspectors tested the aggregates, supervised processes and generally checked the quality of the concrete.

Field inspections of four structures were made to observe the condition of the concrete and to record any evidence of deterioration so as to give them the necessary attention.

Field surveys for materials were made prior to construction work at three sites:—Big Eddy, Barrett Chute and Bark lake.

Protective Coatings

The inspection of paints and other protective coatings has shown a definite increase, 537 samples having been tested at the Laboratories. Exposure tests were made on some paints with special wood-preservative properties.

Steel and Timber

A total of 8,416 tons of steel was inspected, of which 94 per cent was tower and station steel for new installations, and most of the remainder was for reinforcing. About 11,700 pine and cedar poles also were inspected and of these 27 per cent were rejected as not suitable for any purpose of the Commission. A number of stop logs for the dam at Virgin Falls were examined.

Lamps and Lighting Equipment

A total of 84,400 lamps were tested at the factory and 4,833 life tests were made at the laboratory, the latter being an increase of 24 per cent over the previous year. Four special tests were carried out, and 35 tests made on automobile equipment for the Department of Highways. Also four candle-power distribution tests were completed. As in previous years, a number of reflex signals, samples of safety glass, auto headlight devices and direction signals were checked to determine their characteristics.

Research

Research work is carried on continually in both the laboratories and the field to improve the characteristics and quality of materials and equipment in order to insure the highest efficiency and continuity of service and to reduce cost wherever possible.

Vibration of Transmission Line Conductors

The study of vibration in power line conductors was continued and valuable information obtained to guide the engineers in the design of new lines. Mathematical studies were directed chiefly toward the design of test equipment and the characteristics of dampers and conductors.

The experimental test spans referred to in previous reports were in almost continuous operation in connection with studies of the protection required for the St. Thomas-Windsor line and the new 220,000-volt Beauharnois-Burlington line. Specific recommendations were made in both cases for the installation of dampers. Some special cables were tested on these spans to obtain comparative information on their inherent ability to suppress natural vibrations.

Further experimental work was done to determine the physical characteristics of dampers. Energy loss measurements on several types of dampers were made at Stanford University, a member of the Laboratory staff being present.

Two fatigue testing machines were in continuous use on aluminum and galvanized steel wire. Two additional machines were ordered; one arrived in September and has since been in operation. Fatigue, bend and twist

VIBRATION STUDIES ON TRANSMISSION LINE CONDUCTORS

Left — Electrical strain gauge, mounted for test, showing its two gauge points in contact with one strand of a conductor

Right — The combined bridge and electronic amplifier used with the gauge. By means of this equipment, together with an oscillograph, rapid variations of very small strains in the strand are recorded

tests were completed on a large amount of steel wire removed at different stages in the hot dip and electro-galvanizing processes.

A number of vibration fatigue tests were made on the Laboratory span to determine the endurance of certain cables, clamps and connections. The study of the forces developed and the vibratory displacement near the clamps has been continued on various types of cable.

Electrical Insulation

A new method was devised, and equipment assembled, for detecting the presence of conducting material in moulded and sheet insulation. Treatment of line insulators to prevent radio interference was a subject of active study. Klydonographs were installed at one large station to record the frequency and magnitude of lightning strokes, and readings were taken periodically.

Remote Control of Loads

Various systems of off-peak control of loads such as electric water heaters, have been investigated and engineering assistance was given to a number of municipalities where installations were contemplated.

Rural Applications of Electricity

Investigations of the characteristics of grain grinders were continued and a machine was constructed which incorporated the features developed in previous work. The objective in these studies is the design of a suitable grinder in small size which will sell at a reasonable price to meet the requirements of a large number of rural customers.

The equipment previously installed at the Ontario Agricultural College in Guelph for experiments in soil heating and the application of artificial illumination to plant growth was in use during the fall, winter and spring

months. These investigations have resulted in a number of commercial florists adapting these methods in an experimental way to further production in their own greenhouses.

Electric Welding

A method of comparing stresses in welded joints, before and after stress relieving, was developed and will be useful in determining the quality of welds. The information gained in welding studies was found valuable in the inspection of welded tanks and other equipment fabricated for the Commission.

Radio Interference

Field tests of radio interference were made on several power lines of various voltages using a radio noise meter specially adapted to this purpose. The effects of such factors as temperature, humidity, proximity of ground wires and telephone lines were studied.

The interference caused by household appliances and other low-voltage devices was measured on a large number and variety of units.

Methods of suppressing radio interference and the determination of probable allowable limits were the objectives in these studies.

Electronic Applications

Studies of direct-current power transmission were continued and a bibliography of historical and recent technical articles was prepared. The problems of relaying and communication on the 220,000-volt power systems received further attention.

Domestic Hot Water Tanks and Heaters

The study of corrosion in domestic electric hot water tanks has been continued to determine the effect of size or surface area of the heating element upon the economy of operation and life of the elements. The behaviour of different elements in galvanized iron and in non-ferrous tanks was studied and some specially coated or covered elements were tested. Trouble with fuse links in thermostats also was investigated and a more suitable arrangement of link was found.

Masonry Materials

Several important problems relating to mass concrete construction were studied. These included methods of crack control, special form linings, types of cement, artificial cooling, the use of large aggregates, construction joints and winter concreting. Special attention was given to the study of concrete durability, and refrigeration equipment was installed for use in further investigations. The deterioration of cement in storage was further studied, also water movement through concrete and methods of curing concrete while retaining the moisture. Existing concrete structures were examined to observe the deterioration and determine the necessity of repair.

A specification for concrete jobs requiring less than 500 cubic yards of materials was completed. This was designed to meet the needs of foremen on small construction projects and to insure greater uniformity in concrete work.

Paints and Protective Coatings

Approval tests were made on a number of brands of paint, and also comparative studies on cap sheet roofing felts and roofing plastics.

Some of the more recent types of paints exposed in the Ottawa and Niagara rivers were inspected and tests were made on a new non-skid floor paint.

The corrosion of buried pipes and cables was studied as part of an investigation into the corrosive properties of soils with a view to applying suitable protective coatings.

Petroleum Products

A method of refining used lubricating oil was developed and a large amount of oil at Queenston was reclaimed by this means. A new type of oil filter was designed and built and a new filter paper for oil was tested. The effect of light on oil in clear and coloured containers was studied.

Treatment of Wooden Transmission Structures

The application of sand creosote collars for preservation of wood poles was continued and split collars for reinforcing and treating poles have been applied more extensively. Solid cylinders were used on a number of poles.

The inspection of a group of eastern cedar poles in service was completed. A number of poles erected in 1935 and treated in various ways were examined to determine the effects of this treatment.

Joints in Electrical Conductors

Observations were continued on a number of joints in electrical conductors to determine the rate of deterioration and increase in resistance by the effect of weather, without flow of current. Some field investigations were made on joints which failed in service and on several other joints which had developed dangerous high resistances. An extensive programme of joint testing was started and a method developed which would avoid the necessity of cutting out large numbers of joints, allowing them to be welded while in tension.

Grounding

The problem of grounding transmission and distribution systems in rural areas was studied using driven electrodes, and the resistances of more than 6,500 existing consumers' grounds were measured. Tests were commenced on standard ground rods, portions of which were galvanized, to determine the life of these rods in certain soils, and the advantages of galvanizing.

Miscellaneous Research

Studies and investigations also were carried out on a variety of other matters. Chemical tests were made on submarine cable, cooling pond water, wood fuel and a substitute for rubber. The study of soil mechanics was continued. The stress-strain characteristics of gasket materials was investigated, and development tests were made on a new type of gap for use in

ROCKWELL HARDNESS TESTER
Used in determining the hardness of metals

place of lightning arresters. Power line interference with telephone circuits was given considerable attention and the determination of stress by photoelasticity was studied with a view to installing suitable test equipment in the Laboratories.

New Equipment

Several important items of testing equipment were developed and built at the Laboratories during 1940. These include a live-line vibration recorder for use on power line conductors, an electric strain gauge and calibrator to measure dynamic stresses in the individual wires of a vibrating cable, an instrument to provide a continuous record of cable displacement near the clamps during fatigue tests, and an inertia amplitude recorder, designed on the magnetic principle, for use on conductor vibration tests.

New instruments and other equipment purchased for use in testing include a radio beat-frequency oscillator and audio oscillator for vibration studies on cables, stroboscopes and strobolux instruments for observing the motion of vibrating and rotating bodies by the stroboscopic principle, a strip-chart recording wattmeter for use with continuous amplitude apparatus in vibration tests, a vibration generator for use on the third laboratory cable

DRYING BY INFRA-RED RADIATION

Banks of tungsten lamps with special gold-plated reflectors are arranged in ovens or tunnels and provide radiation for drying paints and textiles—a new method of applying heat for industrial purposes

At right, above the table and below, are some forms of reflectors for other drying tests

testing span, two fatigue testing machines for wire, a Rockwell tester for determining the harshness of metals, infra-red radiation equipment to study methods of drying paints and textiles, and a special low-temperature refrigerator for freezing and thawing tests on concrete and concrete aggregates. X-ray equipment also was purchased and is being installed for use in searching for internal defects in metal parts and various materials.

Specifications and Committee Work

Meetings and conventions of the following organizations were attended by members of the staff:—Canadian Engineering Standards Association, National Research Council, Canadian Electrical Association, Engineering Institute of Canada, American Institute of Electrical Engineers, American Concrete Institute, Portland Cement Association, American Society for Testing Materials, National Fire Protective Association, Radio Manufacturers Association, Niagara Peninsula Maintenance Association, The Ontario Municipal Electrical Union, and the Association of Municipal Electrical Utilities.

APPROVALS LABORATORY

Reference has already been made in the introductory paragraphs to the change in status of the Approvals Laboratory which has necessitated some change in the accounting system and a much closer contact with the staff of the Canadian Engineering Standards Association. The Approvals engineer attended most of the meetings of the administrative board of the Approvals division which are held monthly in Toronto, Ottawa or Montreal.

The inspection and approval of appliances and fittings has continued through the year. A total of 705 applications for approval were received, 366 special inspections were made and 4,123 reports were issued on factory inspection. The quantity of labels sold for cord, wire, cable, conduit, etc., showed an increase of 35 per cent over the previous year, the labels for conduit alone increased about 57 per cent, due to the increased activity in the building trades, in the erection of factories for munitions, hangars, barracks for the army and air force, and other war and housing requirements.

A total of 453 factory inspections of wiring materials was made and 842 reports were forwarded to manufacturers.

ELECTRICAL INSPECTION DEPARTMENT

This department handled the largest volume of work for any year since it was organized in 1915. The increase in number of inspections apparently was due to the accelerated industrial activity brought about by the war. New manufacturing, ordinance and aircraft plants, and other military projects, together with the construction resulting from the Commonwealth Air Training Plan, augmented the work of the department in inspection of both wiring installations and special equipment designed for war materials manufacture.

Statistical

A total of 119,271 permits was issued, about the same as last year, and 214,212 inspections were made, an increase of 2.8 per cent.

Fires Attributed to Electricity

Among the fires reported as caused through defective wiring and equipment, and investigated this year, twelve were found due to these conditions. The particular causes were, short circuits in armoured cable and fixture wire, loose connections at meters, oil-burner ignition equipment, and an electric iron left heating and unattended in a commercial establishment. While some of the other fires may have originated in electric wiring or equipment, the evidence available did not substantiate such a conclusion.

Electrocutions and Fatal Accidents

Five persons were electrocuted through coming into contact with electric wiring or equipment under the jurisdiction of this department. Two were children who touched brass lamp sockets that had been installed within reach of grounded material; two were electricians who attempted to work on live circuits before opening the disconnecting switches, and one was an electrician working on a dead circuit in too close proximity to live overhead conductors.

Ground Tests

A total of 3,798 ground resistance tests were made in isolated communities and rural districts.

Infractions of Regulations

Forty-two persons and companies were prosecuted for various infractions of the regulations governing the installation, sale and disposal of electric wiring and equipment.

NEW TRUCK FOR STATION MAINTENANCE AND LINE CONSTRUCTION

An all-steel body, with sliding roof to allow transportation of long bushings, etc. Accommodation for six men.

The Canadian Electrical Code

Members of the Laboratory and Electrical Inspection staffs attended thirty-three meetings and assisted in revision of sections of Parts I and II of the Code, and in compiling sections of Part IV.

There was nothing particularly active this year regarding Part I of the Code, on electrical installations, apart from applications for interim revisions being received. These were considered and necessary steps taken at the meeting of the central committee held in Toronto in September.

The work associated with Part II of the Code, which deals with the approval of specifications for electrical equipment, included compilation of material and preparation of preliminary drafts, attendance at meetings and preparation of minutes, revisions of drafts, and also a large amount of correspondence and frequent interviews with sub-committees and manufacturers.

Five specifications were issued by the Canadian Engineering Standards Association making a total of 53 specifications completed and issued to date. There are at present 35 specifications either in the process of being issued or in some earlier stage of preparation.

Active work was carried on in connection with Part IV of the Code which will establish standard instruments for measuring radio interference,

set tolerable limits for interference and specify ways and means of reducing interference from electric circuits, apparatus and equipment to the limits specified. Government regulations now being drafted make this work more urgent and important than heretofore. The Laboratories have made measurements of radio interference of a large number of pieces of electrical equipment known to be a source of interference. Measurements of field strength adjacent to power lines also have been made. The results of these studies are now available to the Code authorities. A Specification covering construction, test and application of components of radio interference suppression devices has been advanced to second preliminary draft form, having been discussed with industry, inspection authorities and the Department of Transport at an autumn meeting held in Toronto.

PRODUCTION AND SERVICE DEPARTMENT

The operations of the Production and Service department were similar in nature to those of last year and, determined by the value of the work done, showed an increase of 13 per cent. Every effort was made to co-operate with other departments in the development of new tools, apparatus and equipment.

A total of 1,655 orders were completed by the machine and carpenter shops. The work of the garage included overhauling 72 trucks, reconditioning 15 items of gasoline driven equipment for the Construction department and completing 624 orders for miscellaneous truck repairs.

The systematic inspection of the Commission's fleet of 329 trucks was continued, it involved 1,294 individual inspections in the field.

Motor vehicles and other equipment purchased included 59 trucks, and 25 trailers. Of these trucks 39 were replacements and the remaining 20 were additions to the fleet. Winch and derrick equipment also was purchased for 11 trucks.

The fleet mileage was in excess of 3,500,000 miles which constitutes a progressive increase of approximately 1,000,000 miles or 32 per cent over that travelled four years ago.

The Truck Committee studied types of truck bodies used by other utilities, and concerted effort was made to improve the equipment and reduce the number of body types needed to meet requirements. Two types of all-steel truck bodies, equipped with compartment space suitably sub-divided to accommodate tools and equipment were purchased for experimental purposes.

PHOTOGRAPHY, PHOTOSTAT AND BLUE PRINTING

The photographic orders amounted to 741, slightly less than in the previous year, but both blueprint and photostat orders have shown marked increase. In blueprints, 7,190 orders were filled, requiring a total of 121,254 prints, an increase of 30 per cent. For photostat prints there were 607 orders, about 10 per cent more than last year, which indicates that the equipment installed about three years ago is being used to an increasing extent.

SECTION VIII

ELECTRIC RAILWAYS

THE HAMILTON STREET RAILWAY COMPANY

A Subsidiary of The Hydro-Electric Power Commission of Ontario—
Niagara System

Gross earnings on the Hamilton Street Railway for the year 1940 increased 15.98 per cent. Operating expenses (including taxes) increased 20.09 per cent. The result was a decrease in net earnings of \$6,776. The decrease in net earnings was due to increased operating expenses.

The balance sheet and income account are given at the end of Section IX.

Operating results are summarized and compared in the following tabulation and chart.

HAMILTON STREET RAILWAY
Comparative Operating Statistics

	1939		Total	1940		Total

THE HAMILTON STREET RAILWAY COMPANY OPERATING STATISTICS

SECTION IX

FINANCIAL STATEMENTS

Relating to

Properties Operated by The Hydro-Electric Power Commission in the
Niagara, Georgian Bay, Eastern Ontario and Thunder Bay
Systems on Behalf of Municipalities

and to

Northern Ontario Properties Held and Operated by the Commission
in Trust for the Province of Ontario, and

The Hamilton Street Railway Company—A Subsidiary of
Niagara System

IN this section of the Report financial statements relating to the activities of The Hydro-Electric Power Commission, segregated into certain distinct divisions, are presented. The first division relates to those activities on behalf of the co-operative municipalities, which are partners in the main "Hydro" undertaking comprising the Niagara, Georgian Bay, Eastern Ontario and Thunder Bay systems. The second relates to the administration of the Northern Ontario Properties which are held and operated by the Commission in trust for the Province of Ontario. The third relates to The Hamilton Street Railway Company, a subsidiary of the Niagara system.

Co-operative Systems

In the Foreword to this Report a brief reference is made to the basic principle governing the operations of the "Hydro" undertaking in supplying electrical service at cost, and to the *wholesale* and *retail* aspects of the work. A description is also given of the several systems into which the partner municipalities are co-ordinated for securing common action with respect to power supplies, through the medium of The Hydro-Electric Power Commission which, under The Power Commission Act, functions as their Trustee.

Although for the purpose of financial administration the various systems are separate units, there is a similarity of procedure with respect to their operation which enables certain financial statements, as for example the various reserves, to be co-ordinated and presented in summary tables.

The first set of tables in Section IX gives collective results for the co-operative activities related to the four systems. These tables include a **balance sheet; a statement of operation and cost distribution** as detailed in the "cost of power" tables referred to below; schedules respecting **fixed assets, capital expenditures and grants—rural power districts, power accounts receivable, funded debt issued or assumed, renewals reserves, contingencies and obsolescence reserves, stabilization of rates reserves, sinking fund reserves and the account with the Provincial Treasurer of the Province of Ontario.**

The tables which follow these general financial statements relate more particularly to the individual municipality's aspects of the wholesale activities of the Commission and for each system show the **cost of power** to the individual municipal utilities, the **credit or debit** adjustment that is made at the end of the fiscal year, and the **sinking fund** equity that has been acquired by the individual municipality. There is also included for each system a **rural operating** statement.

The charges for power supplied by the Commission to the various municipalities vary with the amounts of power used, the distances from the sources of supply and other factors. The entire capital cost of the various power developments and transmission systems is annually allocated to the connected municipalities and other wholesale power consumers, according to the relative use made of the lines and equipment. Each municipality assumes responsibility for that portion of property employed in providing and transmitting power for its use, together with such expenses—including the cost of purchased power if any—as are incidental to the provision and delivery of its wholesale power. The annual expenses and the appropriations for reserves are provided out of revenues collected in respect of such power, through the medium of power bills rendered by the Commission. The municipalities are billed at an estimated interim rate each month during the year and credit or debit adjustment is made at the end of the year,* when the Commission's books are closed and the actual cost payable by each municipality for power taken has been determined.

Included in the municipality's remittance to the Commission for the wholesale cost of power—besides such current expenses as those for operation and maintenance of plant, for administration, and for interest on capital—are sums required to build up reserves for sinking fund, for renewals, for contingencies and obsolescence, and for stabilization of rates. The first-mentioned reserve, namely, sinking fund, is being created on a 40-year basis for the purpose of liquidating capital liabilities. The other reserves are, respectively, being created to provide funds for the replacing or rebuilding of plant as it wears out, to enable the undertaking to replace existing equipment with improved equipment as it becomes available through advances in science and invention, and to meet unforeseen expenses which from time to time may arise.

*The financial year for the Commission ends on October 31. The financial year for the municipal electric utilities, however, ends on December 31, and the municipal accounts are made up to this date, and so recorded in Section X.

The ultimate source of all revenue to meet costs—whether for the larger operations of The Hydro-Electric Power Commission or for the smaller local operations of the municipalities—is, of course, the consumer. Out of the total revenue collected by each municipal utility from its consumers for service supplied, only an amount sufficient to pay the wholesale cost of power supplied by the Commission as outlined above is remitted to the Commission; the balance of municipal electrical revenue is retained to pay for the expense incurred by the local utility in distributing the electrical energy to its consumers.

Tabular Data

The following comments relate to the tabular data presented:

Balance Sheet.—The first tabular statement given in Section IX is a balance sheet showing the assets, and the liabilities of the several co-operative systems.

Statement of Operation and Cost Distributions.—This statement is a summary of operating expenses and fixed charges as shown in the “cost of power” tables relating to the individual systems as referred to more particularly below.

Fixed Assets.—Details are given concerning the various fixed assets of each system and of the miscellaneous properties, whilst similar details are shown of the capital expenditures for the year ended October 31, 1940.

Capital Expenditures and Grants—Rural Power Districts.—This schedule gives summary information respecting the total capital expenditures on rural power districts and grants-in-aid of construction paid or payable by the Province with respect to such rural districts.

Power Accounts Receivable.—This schedule sets forth the amounts collectable from all classes of power consumers and includes the annual adjustment figures from the “credit or charge” statements for municipalities. The main details of those debit balances three months or more overdue are stated.

Funded Debt Issued or Assumed.—This schedule presents a complete list of the securities issued or assumed by the Commission on account of the several systems, and the Northern Ontario Properties. It should be noted that where securities have been issued to finance properties operated for others, this liability is only shown in memorandum form on the balance sheet of the Commission, whilst the direct liability is shown on the balance sheets of the Northern Ontario Properties.

**Renewals Reserves,
Contingencies and Obsolescence Reserves, and
Stabilization of Rates Reserves.**

These schedules show the provisions made to, the expenditures from, and the balance to the credit of, these reserves for each of the systems and other properties included in the power undertakings operated on a cost basis.

Sinking Fund Reserves.—This schedule summarizes the appropriation of principal and interest with respect to these reserves for each of the systems and certain other properties.

Account with the Provincial Treasurer.—This schedule lists, both for the Niagara and other systems operated on a cost basis, and for the Northern Ontario Properties which are held and operated by the Commission in trust for the Province, the advances from the Province of Ontario and the repayments which have been applied to reduce this liability. It should be noted that Provincial advances to finance Northern Ontario Properties are shown in memorandum form only on the balance sheet of the Commission as the direct liability is carried on the Northern Ontario Properties' balance sheet.

Following these statements, which are common to all systems, there are given for each of the individual co-operative systems four tabular statements as follows:

Cost of Power statement, which shows the apportionment to each municipality of the items of cost summarized in the operating account, as well as the apportionment of fixed assets in service listed in the balance sheet and the amount of power taken by each municipality. It should be noted that the cost of power given in this table is the wholesale cost—that is, the cost which the Commission receives for the power delivered from the main transformer stations serving the local utility. In the case of municipal electrical utilities not directly administered by the Commission, the respective costs of power appear in Statement "B" of Section X as "power purchased".

Credit or Charge statement, which shows the adjustments made in order to bring the amounts paid by each municipal electric utility to the actual cost of service. The credits and charges for the municipal electric utilities are taken up and given effect to in the accounts of "Hydro" utilities.

Sinking Fund statement, which gives the accumulated total of the amounts paid by each municipality as part of the cost of power together with its proportionate share of other sinking funds.

Rural Operating statement, which summarizes for the rural power districts of the system the various items of cost, and the revenues received, in connection with the distribution of electrical energy to rural consumers.

Northern Ontario Properties

The statements and schedules respecting these properties which are held and operated by the Commission in trust for the Province of Ontario include the balance sheet, operating and income accounts, schedules of fixed assets, renewals reserves, contingencies and obsolescence reserves, and sinking fund reserves. These schedules are similar in form to the corresponding schedules relating to the co-operative systems.

The Hamilton Street Railway Company

This is a subsidiary of the Niagara system of the Commission. A balance sheet and operating and income account are presented.

Municipal Utilities

All municipal "Hydro" utilities have current expenses to meet similar to the expenses of the Commission and have adopted the same financial procedure with respect to their operations. In other words, concurrently with the creation of funds to liquidate their debt to the Commission and to provide the necessary reserves to protect generating, transforming and transmission systems, the municipalities are taking similar action with respect to their local "Hydro" utility systems.

The balance sheets, operating reports and statistical data appearing in Section X, under the heading of "Municipal Accounts", relate to the operation of local distribution systems by individual municipalities which have contracted with the Commission for their supply of electrical energy. To this section there is an explanatory introduction to which the reader is specially referred.

Auditing of Accounts

The accounts of The Hydro-Electric Power Commission of Ontario are verified by auditors specially appointed by the Provincial Government. The accounts of the "Hydro" utility of each individual municipality are prepared according to approved and standard practice and The Public Utilities Act requires that they shall be audited by the auditors of the municipal corporation.

THE HYDRO-ELECTRIC POWER COMMISSION OF ONTARIO**FINANCIAL ACCOUNTS****For the Year Ended October 31, 1940**

Relating to Properties operated on a "Cost Basis" for the Co-operating Municipalities and Rural Power Districts which are supplied with Electrical Power and Services from the following Properties:

**Niagara System
Georgian Bay System
Eastern Ontario System
Thunder Bay System
Service and Administrative
Buildings and Equipment**

STATEMENTS

Balance Sheet as at October 31, 1940

Statements of Operations and Cost of Power for the Year ended October 31, 1940.

Schedules supporting the Balance Sheet as at October 31, 1940:

Fixed Assets—By Systems and Properties

Capital Expenditures and Grants—Rural Power Districts

Power Accounts Receivable

Funded Debt Issued or Assumed

Renewals Reserves

Contingencies and Obsolescence Reserves

Stabilization of Rates Reserves

Sinking Fund Reserves

**Account with the Provincial Treasurer of the Province of Ontario
Statements for Municipalities Receiving Power under Cost Contracts**

Auditors' Certificate

We have examined the Accounts of The Hydro-Electric Power Commission of Ontario for the year ended the 31st October, 1940, and report that, in our opinion, the above Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Commission's affairs at the 31st of October, 1940, according to the best of our information and the explanations given to us, and as shown by the books and records of the Commission. We have obtained all the information and explanations we have required.

Dated at Toronto, Ontario,
31st March, 1941.

OSCAR HUDSON AND CO.,
Chartered Accountants,
Auditors.

THE HYDRO-ELECTRIC POWER COMMISSION OF ONTARIO
CAPITAL EXPENDITURES AND GRANTS—RURAL POWER DISTRICTS

Summary at October 31, 1940

Statement showing the Total Capital Expenditures to October 31, 1940, on the construction of Primary and Secondary lines in Rural Power Districts; the portion thereof in course of construction, and the investment in lines in operation; also the amounts of the Grants (fifty per cent of both Primary and Secondary lines) paid or payable to the Commission by the Province of Ontario up to October 31, 1940

System	Total capital expenditure	In course of construction	In operation	Grants (50% of Primary and Secondary lines) paid or payable by the Province as authorized by Orders-in-Council*
	\$ c.	\$ c.	\$ c.	\$ c.
Niagara system.....	22,505,178 98	132,928 91	22,372,250 07	11,201,627 08

Auditors' Certificate

We have examined the Accounts of the Northern Ontario Properties for the year ended the 31st October, 1940, and report that, in our opinion, the above Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the affairs of Northern Ontario Properties at the 31st October, 1940, according to the best of our information and the explanations given to us and as shown by the books and records of the Properties. We have obtained all the information and explanations we have required.

Dated at Toronto, Ontario,
31st March, 1941.

OSCAR HUDSON AND CO.,
Chartered Accountants,
Auditors.

SECTION X

MUNICIPAL ACCOUNTS

and

Statistical Data Relating to Hydro-Electric Distribution Systems Operated by Individual Municipalities Served by The Hydro-Electric Power Commission of Ontario

The Municipal Accounts section of this report presents in summary, and individually, the results of the operation of the local electrical utilities in municipalities owning their own distributing systems and operating with energy supplied by or through The Hydro-Electric Power Commission.

Financial statements prepared from the books of these "Hydro" utilities are submitted herein to show how each has operated during the past year, and its financial status at the present time. Other tables give useful statistical information respecting average costs for the various classes of service and the rates in force.

The books of account of the electrical utilities in all municipalities which have contracted with The Hydro-Electric Power Commission of Ontario for a supply of power are kept in accordance with an accounting system designed by the Commission. During the year 1940 this standard method of accounting was installed in Iroquois and North Bay.

Periodical inspections are made of the books of all "Hydro" electrical utilities and local officials are assisted in the improvement of their office routine with a view to standardizing, as far as possible, the methods employed. In the majority of the smaller municipalities much of the book-keeping for the electrical utilities is performed by representatives of the municipal accounting department of the Commission as a measure of economy. This arrangement insures the correct application of the standard accounting system, with resultant uniformity in classification of revenues and expenditures; secures true reflections of the actual operating results for the year, and greatly enhances the comparative values of the reports.

The first financial statement in this section presents consolidated balance sheets for each year since 1913, and thus shows the march of progress. It combines the balance sheets of the local municipal utilities of all the systems. It is worth noting that the total plant value has increased from \$10,081,469.16

in 1913 to \$97,914,199.95 in 1940, and the total assets from \$11,907,826.86 to \$172,584,735.09. The liabilities have not increased in the same proportion as the assets, rising from \$10,468,351.79 to a maximum of \$52,685,316.86 in 1932, and receding to \$26,923,638.58 in 1940. The reasons for this are the regular fulfilment of debt retirement schedules under serial debenture provisions or by maturity of sinking funds, and also the fact that much of the cost of the increasing plant value has been financed out of reserves and surplus without increasing the capital liabilities of the respective utilities. By this procedure the funds of the systems are used to best advantage. Examination of the results will also show that there is a steady decline in the percentage of net liabilities to total assets; being from 88.0 per cent in 1913 to 17.4 per cent in 1940. The equities in The Hydro-Electric Power Commission's systems automatically acquired through the inclusion of sinking funds as part of the cost of power are not taken into account in arriving at these percentages.

The second financial statement presents consolidated operating reports for each year since "Hydro" service was inaugurated and combines the results from the local municipal utilities of all the systems. After providing for every cost of operation and fixed charges, including the standard provision for depreciation, the combined operating reports show a net surplus of \$1,655,300.24 for 1940. (See also diagrams in Foreword to Report.)

The five statements, "A" to "E", following the two consolidated reports show the financial status of each municipal utility and the results of operations, giving classified information respecting revenue, operating costs, number of consumers and consumption, cost of power to municipalities, power and lighting rates charged to consumers, etc. In statements "A" and "B", the municipalities are arranged alphabetically under each system; in statement "D" the municipalities are arranged in three groups—cities, towns and small municipalities; in statements "C" and "E" all municipalities are arranged alphabetically.

Statement "A" presents the balance sheet of each electrical utility. The plant values are shown under the general subdivisions specified in the standard accounting system and the other items on the positive side of the ledger which are included in total assets are self-explanatory with the exception, perhaps, of the item entitled "equity in H-E.P.C. systems." The sinking fund portion of the cost paid year by year to the Commission for power is for the purpose of ultimately retiring the capital liabilities incurred by the Commission on behalf of the municipalities. A municipality's aggregate equity in the Commission's systems at any time is the total of the sinking fund payments that have been credited to it, together with interest. The total sinking fund equity acquired by these municipalities to the end of 1940 is shown in the consolidated balance sheet to be \$52,457,676.76.

In conformity with a policy of service at cost to the customer, refunds by cash or credit are made during the year in many municipalities from surplus funds accrued to the credit of municipal services, such as street lighting, water works, sewage disposal, etc., and to individual customers. The amounts of the accumulated surplus rebated equalled, in different municipalities, from five per cent to twenty per cent of the previous year's revenue. The total thus returned to customers during the year 1940 amounted in round figures to \$337,000.00.

In each case the balance sheet includes the credit or charge representing the difference between the monthly payments for power at interim rates and the cost of power as ascertained by the Commission upon annual adjustment.

The reserves for depreciation, and the acquired equity in The Hydro-Electric Power Commission's systems, are listed individually and totalled; and under the heading "surplus" are included not only the free operating surplus but the accumulation of sinking fund applicable to debenture debt and also the amount of debentures already retired out of revenue.

The depreciation reserve now amounts to 28.5 per cent of the total depreciable plant, while the depreciation reserve and surplus combined have already reached the sum of \$89,876,828.10, approximately 91.8 per cent of the total plant cost.

Statement "B" shows detailed operating reports for each municipal electrical utility. It gives annual revenues from the various classes of consumers; the items of expenditure which make up the total annual expenditure and the sums set aside for depreciation. The population served by each local utility and the number of consumers of each class are also shown.

The item "purchased power" in this statement includes the debit or credit balances ascertained by the annual adjustment of the cost of power supplied to the municipalities by the Commission.

Of the 295 municipal electric utilities included in this statement, 244 received from consumers revenue sufficient to meet in full all operating expenses, interest, debt retirement instalments, and standard depreciation reserve allocation and to yield an aggregate net surplus of \$1,768,767.53 for the year; 41 were able to defray out of revenue all such charges except a portion of the standard depreciation allocation aggregating \$54,953.21, in the case of 10 utilities the revenue was less than the total operating expenses, interest and debt retirement instalments by \$8,924.15.

Statement "C" shows the installation of street lights in each municipality together with the rates approved by this Commission, the revenue for 1940, and the cost per capita in each municipality.

Statement "D" presents statistics relating to the supply of electrical energy to consumers in Ontario municipalities served by the Commission. It shows the revenue, kilowatt-hour consumption, number of consumers, average monthly consumption, average monthly bill and the net average cost per kilowatt-hour both for domestic and for commercial light service in each municipality. For power service this statement shows the revenue, the number of consumers and the average horsepower supplied by the municipal utility.* For further reference to this informative statement, consult the special introduction to it on page 326.

Statement "E" presents the cost per horsepower of the power provided for and delivered to the municipalities by the Commission, and the local rates to consumers in force in the respective municipalities, during the year 1940, for domestic service, for commercial light service and for power service.

*The statistics include retail power only. Wholesale industrial power as supplied by the Commission direct, is reported in Section IX.

NOTE: The "Cost to municipality in 1940" represents the charges billed to the municipality by the utility for street lighting service in the calendar year. This total charge differs in some cases from the total computed for the installation at the rates shown, for the following reasons:— FIRST: Certain equipment may have been in service for less than twelve months. Second: More equipment than shown for December 31 may have been in service earlier in the year.

**Population not shown in Government statistics. *s* Series system. *m* Multiple system.

††Certain additional street lighting costs for special service are paid direct in form of debenture charges.

Cost of Power to Municipalities and Rates to Consumers for
Domestic Service—Commercial Light Service—Power Service
in Ontario Urban Municipalities Served by
The Hydro-Electric Power Commission
for the year 1940

STATEMENT "D"

Statistics Relating to the Supply of Electrical Energy to
Consumers in Urban Municipalities Served by
The Hydro-Electric Power Commission

Regarding the results of Hydro operation from the standpoint of the consumers, the following tabulation gives much useful and interesting information. For each main class of service in each urban municipal utility receiving power at cost from the Commission, Statement "D" lists the revenue, the consumption and the number of consumers, together with unit average costs and consumptions and other pertinent data.

The policy and practice of the Commission has been, and is, to make as widespread and beneficial a distribution of electrical energy as possible, and to extend to every community that can economically be reached by transmission lines, the benefit of electrical service. Even where, in certain localities, by reason of the distance from a source of supply or on account of the small quantity of power required by the municipality, the cost per horsepower to the municipality—and, consequently, the cost of service to the consumer—must unavoidably be higher than in more favourably situated communities, service has not been withheld when the consumers were able and willing to pay the cost.

The accompanying diagram summarizes graphically certain data of Statement "D" respecting the average cost to the consumer. It will be observed that the total amount of energy sold in municipalities where circumstances necessitate rates which result in the higher average costs to the consumer is relatively insignificant. With respect to power service, it should be noted that the statistics of Statement "D", and of the diagram, cover mainly retail power service supplied to the smaller industrial consumers. The average amount of power taken by the industrial consumers served by the municipalities is about 45 horsepower. The Commission serves certain large power consumers direct on behalf of the various systems of municipalities.

It should be kept in mind that the revenues reported in Statement "D", and used for purposes of calculating the net unit costs to the consumer, are the total revenues contributed by the consumers, and provide, in addition to the cost of power, sums specifically applicable to the retirement of capital, and also operating surplus which is in part applied to retirement of capital or extension of plant and is in part returned in cash to the consumers.

It should also be noted that average costs per kilowatt-hour or per horsepower if employed indiscriminately as a criterion by means of which to compare the rates or prices for electrical service in various municipalities, will give misleading results. The average cost per kilowatt-hour, as given in Statement "D" for respective classes of service in each municipality, are statistical results obtained by dividing the respective revenues by the aggregate kilowatt-hours sold. As such, the data reflect the combined influence of a number of factors, of which the rates or prices to consumers are but one factor. Owing to the varying influence of factors other than the rates, it is seldom found that in any two municipalities the average cost per kilowatt-hour to the consumers, even of the same classification, is in proportion to the respective rates for service. Instances even occur where for a class of consumers in one municipality, the average costs per kilowatt-hour are substantially lower than for the same class in another municipality, even though the rates are higher.

**COST OF ELECTRICAL SERVICE
IN MUNICIPALITIES SERVED BY
THE HYDRO-ELECTRIC POWER COMMISSION OF ONTARIO**

DOMESTIC SERVICE

THE AREAS OF THE CIRCLES REPRESENT PROPORTIONATELY THE TOTAL KILOWATT-HOURS SOLD FOR DOMESTIC SERVICE IN MUNICIPALITIES WHERE THE AVERAGE CHARGE TO CONSUMERS INCLUSIVE OF ALL CHARGES IS, PER KILOWATT-HOUR:

COMMERCIAL LIGHT SERVICE

THE AREAS OF THE CIRCLES REPRESENT PROPORTIONATELY THE TOTAL KILOWATT-HOURS SOLD FOR COMMERCIAL LIGHT SERVICE IN MUNICIPALITIES WHERE THE AVERAGE CHARGE TO CONSUMERS INCLUSIVE OF ALL CHARGES IS, PER KILOWATT-HOUR:

POWER SERVICE SUPPLIED BY MUNICIPALITIES

THE AREAS OF THE CIRCLES REPRESENT PROPORTIONATELY THE AGGREGATE HORSEPOWER SOLD FOR POWER SERVICE IN MUNICIPALITIES WHERE THE AVERAGE CHARGE TO CONSUMERS INCLUSIVE OF ALL CHARGES IS, PER HORSEPOWER PER YEAR:

With respect to domestic service, for example, instances may be observed where two municipalities have identical prices or rates for domestic service, but the average cost per kilowatt-hour to the consumer varies by as much as 50 per cent or more. Such variations are due principally to differences in the extent of utilization of the service for the operation of electric ranges, water heaters and other appliances, an indication of which is afforded by the statistics of average monthly consumption.

In the case of power service, average unit costs are still less reliable as an indication of the relative rates for service in different municipalities. In the case of hydro-electric power supplied to industries at cost, the rate schedules incorporate charges both for demand and for energy consumption, and thus, although the quantity of power taken by a consumer—that is, the demand as measured in horsepower—is the most important factor affecting costs and revenues, it is not the only one. The number of hours the power is used in the month or year—which, in conjunction with the power, determines the energy consumption, as measured in kilowatt-hours—also affects the costs and revenues. Consequently, in two municipalities charging the same rates for power service, the average cost per horsepower to the consumer will vary in accordance with the consumers' average number of hours' use of the power per month. A greater average energy consumption per horsepower increases the average cost per horsepower and decreases the average cost per kilowatt-hour to the consumer, and *vice versa*.*

*In view of the fact that the data of Statement "D" have been misinterpreted in the making of certain comparisons as to the cost of electricity in various territories, it is desirable to add a word of caution respecting their significance. Essentially, the average cost or revenue per kilowatt-hour is *not a criterion of rates* even with similar forms of rate schedules and for the same class of service. Particularly is this true when revenues and consumptions of all classes of service and of all kinds of rate schedules, are indiscriminately lumped together in order to deduce a so-called "average cost or rate per kilowatt-hour" for all services.

In one community rates for each class of service, and the cost to every consumer in each class for any given service and consumption, may be substantially higher than in another community, and yet there may be in the former community a lower "average revenue per kilowatt-hour."

EXAMPLE.—Assume sales of electrical energy by two electric utilities, A and B, in each case 10,000,000 kilowatt-hours.

Class of service	CASE A Higher rates and lower revenues per kilowatt-hour			CASE B Lower rates and higher revenues per kilowatt-hour		
	Energy sales	Rate per kw-hr.	Revenue	Energy sales	Rate per kw-hr.	Revenue
Residence.....	kw-hr. 1,000,000	cents 4	\$ 40,000	kw-hr. 3,000,000	cents 3	\$ 90,000
Power.....	9,000,000	1	90,000	7,000,000	0.75	52,500
Total.....	10,000,000	130,000	10,000,000	142,500
Average revenue....	1.3 cents per kw-hr.			1.425 cents per kw-hr.		

It will be observed that in Case A *the rates* both for residence and for power service are 33 per cent *higher* than in Case B, but the *average revenue* per kilowatt-hour is nearly 9 per cent less.

In this instance, the explanation lies in the *relative quantities* of energy sold to each class. Service to large power consumers entails a smaller capital investment in distribution lines and equipment and lower operating costs per kilowatt-hour delivered, than does service to domestic and to commercial light consumers, and even where the rates for all classes of service are low, produces a smaller average revenue per kilowatt-hour. Consequently, if one electrical utility as compared with another sells a larger proportion of its energy for power purposes, its "average revenue per kilowatt-hour" may easily be lower than that of the other utility even though its rates for every class of service are substantially higher.

Although the derived statistics of Statement "D" are valueless as a means of comparing the *rates* in one municipality with those in another, they nevertheless fulfil a function in affording a general measure of the *economy of service* to consumers in the co-operating Ontario municipalities—an economy that has resulted primarily from the low rates themselves, and secondarily from the extensive use of the service that has been made possible by the low rates.

Actual bills rendered to typical consumers for similar service under closely comparable circumstances constitute the best basis for making comparisons. In researches respecting rates to consumers therefore the actual *rate schedules* of Statement "E" should be employed, and not statistics of average revenues per kilowatt-hour, as these are valueless for rate comparisons—and particularly so when all classifications of service are combined.

In any consideration of the relative economies of electrical service in the various municipalities—whether based on the actual rates for service as set forth in Statement "E", or on the derived statistics resulting from the rates and other factors as presented in Statement "D"—full account should be taken respectively of the influence upon costs of such factors as the size of the municipality, the distance from the source of power, the features of the power developments, the sizes and concentrations of adjacent markets for electricity, and the sizes and characters of the loads supplied under the various classifications by the local electrical utility to the consumers.

In Statement "D" account has been taken of the sizes of municipalities by grouping them according to whether they are (i) cities—over 10,000 population; (ii) towns of 2,000 to 10,000 population; or (iii) small towns (under 2,000 population), villages, and suburban areas in townships (which are comparable in respect of conditions of supply to the smaller towns and villages). The populations are also given, and the situation of any municipality with respect to transmission lines and power supplies may be ascertained by consulting the maps at the end of the Report.

A feature of the electrical service in Ontario municipalities served by The Hydro-Electric Power Commission is the strikingly large average annual consumption per domestic consumer. There are very few Ontario urban municipalities where the average annual consumption per domestic consumer is less than 600 kilowatt-hours. Of the 87 cities and towns with populations of 2,000 or more—in which over 85 per cent of the domestic consumers of the undertaking are served—no less than 78 have an average annual consumption per domestic consumer in excess of 1,000 kilowatt-hours; of these, 56 have an average annual consumption per domestic consumer in excess of 1,500 kilowatt-hours, and 25 have an average annual consumption per domestic consumer in excess of 2,000 kilowatt-hours.

The high average consumption for domestic service results essentially from the policy of the undertaking in providing service "at cost"; the rate schedules designed according to this principle automatically encourage liberal use of the service. Under the standard rate schedules employed by Ontario municipalities, follow-up rates of 1 cent and 1.25 cents (less 10 per cent) are in common use, and as a rule even where the higher initial rates per kilowatt-hour obtain, it is only necessary for the domestic consumer to reach a monthly charge of from \$2.00 to \$3.00 to obtain the benefit of a follow-up rate of 1.8 cents net. The cost of electric cooking is thus within reach of most of the domestic consumers in Ontario. Electric water heating is also encouraged by low flat rates for continuous heaters and by installation of equipment without capital cost to the consumer.

STATEMENT

Statistics Relating to the Supply of Electrical Energy to Consumers
For Domestic Service, for Commercial Light Service

Group III—SMALL TOWNS (less than 2,000 population),

NOTE—The power used in the smaller places and rural districts is, and possibly must always be, a relatively small proportion of the power distributed by the Commission. Thus, the power used by the small municipalities in the following group, which includes small towns, villages and certain suburban areas in townships, is less than 10 per cent of the power distributed by the Commission to Ontario municipalities. This relatively small proportion of the total power,

"D"—Continued

in Ontario Municipalities Served by the Commission
and for Power Service during the year 1940

VILLAGES AND SUBURBAN AREAS

however, exerts upon the economic life of the Province a most beneficial influence. It should further be appreciated that about 35 per cent of these municipalities obtain their power, not from Niagara, but from relatively small water-power developments throughout the Province, or from purchased power. The net cost per kilowatt-hour given in the table is the cost inclusive of all charges. Consult also introduction to Statement "D", page 326.

STATEMENT "E"**Cost of Power to Municipalities and Rates to Consumers for
Domestic Service—Commercial Light Service—Power Service
in Ontario Urban Municipalities Served by
The Hydro-Electric Power Commission
for the year 1940**

In Statement "E" are presented the rate schedules applicable to consumers for domestic service, for commercial light service and for power service in each of the co-operating municipalities receiving service at cost through The Hydro-Electric Power Commission.* The cost per horsepower of the power supplied at wholesale by the Commission to the municipality, an important factor in determining rates to consumers, is also stated.

Cost of Power to Municipalities

The figures in the first column represent the total cost for the year of the power supplied by the Commission to the municipality, divided by the number of horsepower supplied. Details respecting these costs are given in the "Cost of Power" tables relating to the several systems, as presented in Section IX, and an explanation of the items making up the cost of power is given in the introduction to that Section.

Rates to Consumers

The Power Commission Act stipulates that "The rates chargeable by any municipal corporation generating or receiving and distributing electrical power or energy shall at all times be subject to the approval and control of the Commission,"† in accordance with the Act and in pursuance of its fundamental principle of providing service at cost, the Commission requires that accurate cost records be kept in each municipality, and exercises a continuous supervision over the rates charged to consumers.

At the commencement of its operations, the Commission introduced scientifically-designed rate schedules for each of the three main classes into which the electrical service is usually divided, namely: residential or domestic service, commercial light service, and power service, and the schedules in use during the past year are presented in the tables of this statement.

*Except townships served as parts of rural power districts, for which consult latter part of Section III.

†R.S.O. 1937, Ch. 62, Sec. 89.

Domestic Service: Domestic rates apply to electrical service in residences, for all household purposes, including lighting, cooking and the operation of all domestic appliances.

During the past few years most of the urban municipal utilities have further simplified the domestic rate structure by abolishing the service charge, and making a suitable adjustment in the first consumption rate. Where the service charge is retained at 33 and 66 cents gross per month the charge of 33 cents per month per service is made when the permanently installed appliance load is under 2,000 watts, and the charge of 66 cents per month when 2,000 watts or more.

Commercial Light Service: Electrical energy used in stores, offices, churches, schools, public halls and institutions, hotels, public boarding-houses, and in all other premises for commercial purposes, including sign and display lighting, is billed at commercial lighting rates.

Water-Heater Service: For all consumers using continuous electric water heaters, low flat rates are available consisting of a fixed charge per month dependent on the capacity of the heating element and the cost of power to the municipal utility. Such heaters are so connected that the electrical energy they consume is not metered. For new installations the necessary equipment, including heater, thermostat, efficient insulation for water-storage tank, and wiring, is installed by a large number of municipal Hydro systems, without capital cost to the consumer.†

Power Service: The rate schedules given for power service in Statement "E" are those governing the supply of power at retail by each of the local municipal utilities. The Commission serves direct, certain large power consumers under special contracts, on behalf of the various systems of municipalities.

The rates for power service, as given in the tables, are the rates for 24-hour unrestricted power at secondary distribution voltage. For service at primary distribution voltage the rates are usually five per cent lower than those stated. In municipalities where load conditions and other circumstances permit, lower rates are available for "restricted power," discounts additional to those listed in the table being applicable.

The service charge relates to the connected load or to the maximum demand, as measured by a 10-minute average peak, where a demand meter is installed. The prompt payment discount of 10 per cent on the total monthly bill is given for settlement within 10 days.

Under the tabulation of rates for power service there is a column headed "Basis of rate 130 hours' monthly use of demand." This column shows approximately the net annual amount payable for a demand of one horsepower, assuming a monthly use of 130 hours, which includes 30 hours' use each month at the third energy rate. Broadly, the figures in this column serve to indicate approximately the relative cost of power service in the different municipalities listed.

†In addition, the municipal Hydro systems supply booster water-heating equipment to furnish extra requirements beyond the capacity of the continuous heater; current for the booster heater is measured and charged for at the regular rates.

STATEMENT

PROVINCIAL AUDITOR'S REPORT

1939 - 40

PRINTED BY ORDER OF
THE LEGISLATIVE ASSEMBLY OF ONTARIO
SESSIONAL PAPER No. 27

ONTARIO

TORONTO

Printed and Published by T. E. Bowman, Printer to the King's Most Excellent Majesty

1941

TO THE HONOURABLE ALBERT MATTHEWS,
Lieutenant-Governor of the Province of Ontario.

MAY IT PLEASE YOUR HONOUR:

The undersigned has the honour to present to Your Honour the Report of the Provincial Auditor for the year ended March 31st, 1940.

Respectfully submitted,

M. F. HEPBURN,
Treasurer.

Treasury Department, Ontario.
January 6th, 1941.

PROVINCIAL AUDITOR'S OFFICE,

January 6th, 1941.

TO THE HONOURABLE M. F. HEPBURN,
Provincial Treasurer.

SIR: I have the honour to submit, for the information of the Legislative Assembly, my report for the year ended March 31st, 1940, in accordance with the requirements of The Audit Act.

Respectfully submitted,

H. A. COTNAM, C.A.,
Provincial Auditor.

REPORT FOR 1940
OF
The Workmen's Compensation Board
ONTARIO

Offices:

4th Floor, Canada Life Building,
350 University Ave., Toronto.

TO HIS HONOUR THE LIEUTENANT-GOVERNOR:

The Workmen's Compensation Board begs to submit its Report for the year 1940.

GENERAL REVIEW

During the year 1940 employment in industry under Schedule 1 of The Workmen's Compensation Act increased steadily and this increase has been reflected in both assessments received and in accidents reported. The provisional pay roll in Schedule 1 for 1940 was estimated at \$628,161,000, at an average rate of \$1.02 on every \$100 of pay roll; for 1939 the provisional pay roll was estimated at \$530,262,800, at an average rate of \$1.06.

Accidents and Benefits

During 1940, there were reported to the Board 81,116 accidents, as compared with 60,520 in 1939, and 59,854 in 1938.

The total benefits awarded during the year amounted to \$7,282,877.57, compared with \$6,152,407.53 during 1939, and \$6,464,261.19 during 1938.

Of the total benefits awarded during the year, \$5,874,627.42 was for compensation, and \$1,408,250.15 was for medical aid.

The total benefits awarded from the commencement of the Act (January 1, 1915) to January 1, 1941, amounted to \$142,236,433.09, and the total accidents reported during the same period were 1,454,793.

Assessments

The provisional assessments for 1940, including estimated adjustments, amounted to \$6,409,486.96, as compared with \$5,637,916.40 provisionally estimated and \$5,830,424.56 actually assessed for 1939. For 1940 the average rate was \$1.02, as compared with \$1.06 for 1939, and \$1.31 for 1938. The provisional surplus to the credit of the classes at the end of 1940 was \$2,013,381.13, as compared with \$2,648,711.01 at the end of 1939.

Finances

After outstanding liabilities are properly valued, there remains a provisional surplus of \$2,013,381.13 standing at the credit of the classes comprising Schedule 1, in addition to a Disaster Reserve of \$239,782.27, a Reserve for Depreciation of Securities of \$897,708.95, an excess of \$456,825.45 in the Silicosis Account of cash over liabilities for silicosis in the mining industry. This makes a total of \$3,607,697.80, as compared with \$4,251,721.90 at the end of 1939. These assets in excess of liabilities are in addition to accrued interest on investments.

This balance of \$5,607,697.80 is the working capital of the Board after provision has been made for all outstanding liabilities. It has been collected from the employers largely by way of assessment, in addition to what has actually been required to meet the losses arising from accidents and the expense of administering the Act, and the cost of employers' safety associations.

In addition, there was at December 31, 1940, \$26,187,374.37 in the Pension Fund, which is not a reserve but a fund to pay pensions to widows, children, and disabled workmen, which pensions run for life or lesser periods, and which were calculated on an actuarial basis, the liability being equal in amount to the fund. From time to time actuarial revaluations of the liabilities are made to ensure the proper amount being kept in the fund.

Investments

All the Board's funds, with the exception of cash necessary for current operations, are invested. In Schedule 1 these investments, calculated on amortized values, totalled \$55,704,661.97. From investments a rate of 4.52 per cent. was received in 1940, as compared with 4.38 in 1939.

At the end of 1940 there was in default in Schedule 1 \$115,251.28, consisting of \$100,327.60 principal and \$14,923.68 interest, as compared with a total of \$534,362.17 at the end of 1939, and \$358,395.17 at the end of 1938. During 1940 the accruing interest in default totalled \$2,949.37, as compared with \$48,534.09 during 1939, and \$60,892.19 during 1938.

The Board's portfolio of investments shows 68 per cent. held in obligations of the Dominion and Ontario Governments, and 32 per cent. in municipal and county direct or guaranteed debentures.

Safety Associations

The Board has increased its aid to Safety Associations. During 1940, \$241,760.00 was paid, as compared with \$218,511.25 in 1939. The Board has appointed an Accident Prevention Officer as liaison with these Safety Associations and to assist them in securing data and material.

Rehabilitation

The work of rehabilitating injured workmen has been considerably "stepped up," one department of the Board working full time, the Physiotherapy and Occupational Therapy Clinics have been amalgamated, new premises leased, and the work intensified.

Public Relations

The Board has continued to assist groups of employers and workmen better to understand the workings of Workmen's Compensation, and has extended its scope. More and more groups are asking for this service.

Contents of the Report

The chapters following contain the particulars of the Board's operations during 1940, and the Appendix a resumé of operations since January 1, 1915.

Dated at Toronto this 27th day of March, 1941.

J. HAROLD, Chairman.
D. J. GALBRAITH, Vice-Chairman.
W. D. SMITH, Commissioner.

CHAPTER I

SCHEDULE I INDUSTRIES FOR 1940

As some of the industries covered by the Act are under the collective liability system (the employer not being individually liable for accidents to his workmen but being assessed to provide a general fund out of which accidents occurring in his class of industry throughout the Province are taken care of) and others are under the individual liability system (the employer being liable to pay for accidents happening to his own workmen), separate financial statements have to be made for each. The industries under the collective liability system are included in Schedule 1, and those under individual liability in Schedule 2, the former comprising much the greater number.

This chapter deals with Schedule 1 industries for 1940. Schedule 2 industries are dealt with in Chapter II, while Chapter III deals with the work handled in both schedules and the administration of the Act generally during the year, Chapter IV with the different funds in both schedules and their standing at the end of 1940, and Chapter V gives financial and statistical information for 1939 which was not available when the report for that year was made.

Provisional Financial Statement

The provisional financial statement for the industries in Schedule 1 for 1940 is contained in Table 1. To show the standing for the year, estimates have to be made of adjustments of assessments according to actual pay rolls and on the retroactive rates (the assessments for the year being first levied on an estimate of pay roll and at a provisional rate), and estimates also have to be made of compensation and medical aid still to be awarded for accidents happening during the year which have not yet been finally disposed of by reason of the injured workman being still under medical treatment or reports not being received. These estimates contain also all liabilities for claims of previous years yet outstanding and provision for claims of prior years which may subsequently be adjusted. Final figures for the year 1940 will be shown in the next subsequent report in the same manner as the final figures for 1939 are shown in Table 15 of this report.

The difference is to be noted between the amount of compensation and medical aid awarded for the year's accidents and the amount awarded during the year. The latter is partly for the prior year's accidents, while upon the other hand it does not cover all the liability for the current year's accidents. The more correct system of charging each year as far as possible with its own accidents, and for that purpose keeping the year's accounts open till the end of the subsequent year, has been adopted, rather than the looser method of taking the amount awarded during the year as the cost of the year's accidents and leaving always an outstanding liability unprovided for. For the purpose of information and comparison, however, the amounts awarded during the year are shown in Chapter III.

Accounts for Each Class

The industries in Schedule 1 are divided into classes, and as each class (subject to any transfer that may be made to it from the Disaster Reserve in any case of undue burden) bears its own accident cost—the employers in the class being in effect a mutual insurance association—separate accounts have to be kept for the different classes. Each class is credited with its own assessments, its share of interest and other income, and with any transfer made to it from

Disaster Reserve, or credit from any other source, and charged with the cost of its own accidents, its share of administration expenses, the cost of its safety association if it has one, and with its share of any amount set aside for Disaster Reserve.

The figures for each class, and the provisional surplus or deficit for the year, and the balance forward from prior years, and the provisional surplus or deficit for all years, are shown in Table 1. The final figures for each class and also the figures for the different groups within the classes (as in Table 15) will be shown in the next report. The assessments are fixed according to the accident cost and other expenses and charges in each class and group and having regard to the other income and credits.

The classes are numbered and the nature of the industries in each is shown at the bottom of Table 1 and full enumeration of the industries will be found in Schedule 1 of the Act and in the Board's rate book, the latter also showing the grouping within the class.

Assessments and Other Credits

The total assessments in all classes in Schedule 1 for the year 1940, including estimated adjustments, amounted to \$6,409,486.96. In assessments are included collections for default in making returns or payments and interest for underestimate of pay roll. The other income and credits for the year consisted of interest on investments and funds not elsewhere credited; reimbursement for veteran cases received from the Department of Pensions and National Health; cost of accidents collected under Section 107 for failure to furnish pay roll prior to accident; recovery from third parties under Section 8; receipts by virtue of special orders under Section 90 (5); collections under Section 114 (3) from employers for failure to furnish particulars of accidents, refunds of accident cost and from the Province of Ontario for blind workmen. Other income and credits amounted to \$236,788.90. The total income and credits for the year are, therefore, \$6,646,275.86.

Compensation and Other Charges

The compensation and medical aid for Schedule 1 industries for the year, including estimate for what is still to be awarded for accidents happening during the year and for prior years' accidents, amounted to \$6,202,407.44. There were other outlays amounting to \$748,161.07, including administration expenses of \$475,090.48; mine rescue work, \$15,477.04; Section 8 disbursements, \$2,688.91; safety associations, \$241,760.00; and occupational therapy, \$13,144.64. The total expenditures and charges for the year, including liability for pneumoconiosis outstanding of \$1,420,064.29, and adjustments for prior years' accidents, were \$8,570,632.80.

The provisional deficit for the year, including pneumoconiosis outstanding and the carry-over for prior years' claims, was \$1,724,556.94, which, deducted from the surplus forward from prior years, of \$5,757,758.07, makes a net provisional surplus of \$2,013,581.13 at December 31, 1940.

Number of Employers

The total number of employers listed in Schedule 1 at the end of 1940 was 24,585, as compared with 24,975 at the end of 1939. The number in each class and group of industry is shown in Table 2.

Wage Expenditure

The estimated total wage expenditure in Schedule 1 industries for the year 1940, calculated on provisional figures, is \$628,161,000, as compared with \$550,262,800, in 1939. The amounts for the different classes of industry are shown in Table 3.

The Board has no similar data for Schedule 2 and Crown industries as in these the employers pay for accidents to their own workmen and are not required to make pay roll returns or pay assessments upon them as in Schedule 1. The pay roll would probably be about one-third that of Schedule 1.

Average Rates of Assessment

Assessments in Schedule 1 are in the form of a percentage of pay roll, and the average rate or percentage over all the classes actually paid by the employers can be ascertained by relating the total assessments to the total wage expenditure. This, on the provisional figures, gives an average rate of assessment for 1940 of \$1.02 on every \$100.00 of pay roll. The average rate for all years since the commencement of the Act was \$1.18. The decline in the over-all rate was due in part to refund of differential rating plan penalties collected in 1937 and 1938 and later refunded.

1. The first part of the document is a list of names and titles, including "The Hon. Mr. Justice" and "The Hon. Mr. Justice".

2. The second part of the document is a list of names and titles, including "The Hon. Mr. Justice" and "The Hon. Mr. Justice".

3. The third part of the document is a list of names and titles, including "The Hon. Mr. Justice" and "The Hon. Mr. Justice".

4. The fourth part of the document is a list of names and titles, including "The Hon. Mr. Justice" and "The Hon. Mr. Justice".

5. The fifth part of the document is a list of names and titles, including "The Hon. Mr. Justice" and "The Hon. Mr. Justice".

TOTAL	\$628,161,000

CHAPTER II

SCHEDULE 2 INDUSTRIES DURING 1940

Table 4 is a statement of the compensation awarded and the moneys handled during 1940 in Schedule 2 industries (in which the employer is individually liable for accidents to his workmen). Dominion Crown Cases under the Act by Dominion legislation and Provincial Crown Cases referred to the Board for adjustment are included.

The total amount of compensation awarded in Schedule 2 industries and Crown cases during 1940 was \$1,022,157.92. Of this amount, \$211,040.57 was for workmen of municipal corporations; \$186,182.50 for steam railroads; \$9,776.01 for electric railways; \$86,782.06 for navigation companies; \$1,951.10 for express and sleeping-car companies; \$5,769.05 for telephone and telegraph companies; and \$37.85 for all other industries in Schedule 2; \$365,069.52 for Dominion Crown Cases and \$155,549.86 for Provincial Crown Cases. Of the total amount awarded, \$572,810.72 was for pensions in pension cases and \$449,347.20 was for cases not pension cases and for compensation not pensions in pension cases.

In pension cases, except in the case of municipal or government bodies or departments thereof, not so desiring, deposits must be made by employers in Schedule 2 industries. Particulars of these are given under "Deposits under Section 28". Under "Claimants' Moneys" are included moneys held by the Board under awards in which in the interest of the claimant, or for some other reason, payment of the amounts held is deferred to a later date, as in the case of minors. "Deposits under Section 32" are amounts deposited with the Board to enable the Board to make prompt payments without waiting for receipt of cheque from employer.

Employers in Schedule 2 are assessed their share of the expense of administration as set out in Table 8. For 1940 that share amounted to \$17,550.00 as compared with \$16,944.00 in 1939, and \$52,565.12 in 1938. Proportionate to the amount of compensation awarded, administration expenses in Schedule 2 and Crown Cases were 5.94 per cent. in 1940 as compared with 4.06 per cent. in 1939, and 6.71 per cent. in 1938.

Further information as to Schedule 2 funds and particulars of Schedule 2 investments are given in Chapter IV, and in Tables 9 and 14, and in the Appendix.

CHAPTER III

WORK HANDLED DURING 1940

This chapter deals with the work handled during 1940, and with the administration of the Act generally during the year. Particulars are given in Tables 5 to 8.

The figures are for what has been dealt with during 1940 without regard to the year in which the accidents dealt with occurred, while, as explained in Chapter I, the figures in Chapter I and Chapter V are for the accidents happening during the year.

Benefits Awarded During the Year

The total amount of compensation awarded during 1940 was \$5,874,627.42, of which \$4,852,469.50 was in Schedule 1 industries, \$501,538.74 in Schedule 2 industries, and \$520,619.18 in Crown cases. There was also paid for medical aid in Schedule 1 industries during the year \$1,408,250.15, making the total benefits awarded during the year \$7,282,877.57. In Schedule 2 and Crown cases (for the most part) medical aid is provided directly by the employer and no figures are available.

The benefits awarded each year, and the total since the commencement of the Act, are as follows:

Year	Schedule 1		Schedule 2	Total Benefits
	Compensation	Medical Aid	and Crown Compensation	
1940	\$4,852,469.50	\$1,408,250.15	\$1,022,157.92	\$7,282,877.57
1939	4,174,407.96	1,094,693.30	883,306.27	6,152,407.53
1938	4,362,618.00	1,153,894.99	947,748.20	6,464,261.19

1916	1,553,653.38	†.....	451,709.93	2,005,363.31
1915	692,389.09	†.....	200,932.05	893,321.12
Totals	\$92,824,530.95	\$21,730,937.12	\$27,680,965.02	\$142,236,435.09

*Half year only.

†No provision for medical aid.

The increase in benefits from the early years is largely by reason of increase in wages, compensation being for the most part a percentage of wages, and additional industries have been covered, and some material changes were made in compensation. The large total for 1920 is by reason of the retroactive increase in widows' and children's pensions, and the small amount awarded during

1915 is by reason of many 1915 accidents not being, nor capable of being, finally disposed of till the following year. The amount of benefits awarded for each year's accidents, as distinguished from the amount awarded during the year, is shown in Chapter V.

Accidents Reported During the Year

During 1940, 81,116 accidents were reported to the Board. These included some not serious enough to involve payment of either compensation or medical aid and for which no claim was made, and others for which claims were made but were not allowed by the Board.

At the close of the year there were 2,028 claims in assembly, as compared with 1,447 at the end of 1939, notice of the accident having been given but reports necessary to deal with the case not yet having been received.

The number of accidents reported each year, and the total number since the commencement of the Act, are as follows:

Year	Total
1940	81,116
1939	60,520
1938	59,834
1937	70,582
1936	61,382
1935	58,546
1934	54,730
1933	58,042
1932	41,470
1931	52,894
1930	69,267
1929	87,105
1928	79,398
1927	71,979
1926	65,916
1925	60,012
1924	58,675
1923	61,109
1922	50,411
1921	45,191
1920	54,851
1919	44,260
1918	47,848
1917	56,552
1916	26,092
1915	17,053
All Years	1,454,795

Accidents Paid For During the Year

Table 5 shows the number of accidents in which compensation or medical aid was paid during the year. The total number was 70,111, as compared with 54,405 during 1939. The 70,111 comprised 263 deaths, 1,114 permanent disability cases, 28,633 temporary disability cases, and 40,101 medical aid only cases. Except for Provincial Crown cases, Schedule 2 and Crown cases involving medical aid only, which are a large proportion of the accidents reported, are not included as accidents paid for, as the medical aid is furnished by the employer.

The number of accidents in which compensation or medical aid was awarded each year since the commencement of the Act is as follows:

Year	Schedule 1	Schedule 2	Crown	Totals
1940	66,607	1,785	1,719	70,111
1939	50,316	1,700	2,389	54,405
1938	47,816	1,874	2,235	51,925
1937	61,643	1,897	2,828	66,368
1936	51,620	1,828	2,741	56,189
1935	46,960	1,707	5,631	54,298
1934	41,244	1,800	6,258	49,302
1933	29,766	1,487	2,453	33,706
1932	38,469	1,914	3,521	43,904
1931	43,611	2,561	2,710	48,882
1930	56,715	2,723	2,357	61,795

1927	55,894	2,741	2,443	61,078
1926	52,199	2,489	2,182	56,870
1925	47,782	2,734	2,217	52,733
1924	46,616	2,820	2,475	51,911
1923	47,873	3,849	1,916	53,638
1922	37,172	4,572	765	42,509
1921	34,271	5,161	834	40,266
1920	42,693	4,444	714	47,851
1919	34,400	4,517	153	39,070
1918	36,565	4,335	30	40,930
*1917	25,277	3,406	19	28,702
*1916	15,370	2,825	3	18,208
*1915	8,328	1,494	7	9,829

*Cases involving medical aid only, not covered till July 1, 1917.

Awards Changed

In addition to claims compensated, as shown in Table 5, the Board in 1940 opened for further award 806 claims which had been settled previously.

Cheques, Assessments, Mail, and Callers

In all, 329,001 cheques were issued during 1940, an average of 1,112 daily, and there were 35,645 assessments made, including refunds. About 6,700 pieces of mail were handled daily, and the average number of office callers was 78 a day.

Receipts and Payments

The receipts and payments during the year are shown in Table 6, the statement for Schedule 2 including Crown cases. Explanation of the items and the funds referred to will be found in other parts of the report. A summary of receipts and payments since the commencement of the Act is given in the Appendix.

Payments to Safety Associations

The safety or accident prevention associations are organizations of employers established under the authority of the Act by the employers in 22 out of the 24 classes of industry. They are under the management of the employers but the expenses are paid by the Board out of the Accident Fund.

The total amounts so paid are set out in Table 7, which table also shows the amount paid out on account of mine rescue work in Class 5.

Administration Expenses

The administration expenses of the Board, analyzed under the different headings, are shown in Table 8. The gross administration expenses during 1940 were \$545,746.72, which included special statistical services for which refunds have been received of \$8,150.00, and accountable warrants of \$3,785.00, and salary advances to members of the staff of \$725.57, making the total ad-

ministration expenses \$553,086.15, as compared with \$470,959.49 during 1939. The employers pay the whole expense of the administration of the Act. The amount is divided, according to the number of accidents handled, among Schedule 1 (Accident Fund, Silicosis, Mine Rescue and Rehabilitation Clinic Accounts), Schedule 2, and Dominion and Provincial Crown.

The amount charged to the Silicosis Account was \$16,572.08; to the Rehabilitation Clinic, \$1,000.00; to Mine Rescue Work, \$751.29; to Schedule 1 employers, \$474,535.78; to Schedule 2, \$17,550.00; to Dominion Crown, \$17,732.00; and to Provincial Crown, \$4,945.00.

The cost of office furniture, fixtures, and equipment, including permanent equipment, has always been charged to administration expenses in the year in which payment therefor was made, and no entry for which has ever been made in the standing of the funds. The value of this furniture and equipment at the present time is estimated at about \$36,000.

The total administration expenses for 1940 less expenses of supervising work in connection with Silicosis, Rehabilitation, Clinic, and Mine Rescue Stations (not properly administrative work) and handling claims for silicosis, were 7.07 per cent. of benefits awarded, being 7.58 per cent. of benefits awarded in Schedule 1, and 3.94 per cent. in Schedule 2 and Crown cases.

A charge of \$13,144.64 was made for occupational therapy, there being \$21,593.43 less \$30.00 accountable warrants to members of staff, and \$8,418.79 credit balance from physiotherapy clinic, the two clinics being amalgamated from October 1, 1940. This amount of \$13,144.64 was pro rated among the classes in Schedule 1.

CHAPTER IV

CONDITION OF FUNDS

A general statement of the condition of the funds in Schedule 1 and in Schedule 2 is contained in Table 9, and particulars of the various funds and of the Board's investments are given in Tables 10 to 14. A summary since the commencement of the Act will be found in the Appendix.

Schedule 1 Funds

The Schedule 1 funds are known and referred to as the "Accident Fund". They comprise, in addition to current funds out of which temporary payments of compensation, medical aid and administration expenses are paid, the Pension Fund, Disaster Reserve, and Compensation Deferred. The standing of the Accident Fund, showing assets and liabilities, at December 31, 1940, is shown in Table 9. The balance of assets in excess of liabilities at that date was \$3,150,872.35, being \$239,782.27 Disaster Reserve, \$2,013,381.13 standing at the credit of the Classes December 31, 1940, and \$897,708.95 reserve for depreciation of securities. This is exclusive of office equipment and furniture mentioned in Chapter III.

Pension Fund

The Pension Fund, representing the outstanding pension liability, comprises the largest part of the funds standing to the credit of Schedule 1. The purpose of the Pension Fund is to take care of future payments of pensions which have already been awarded. Actuarial tables, embodying the contingencies of death and remarriage, have been compiled to show for each age and kind of pension the average amount (sometimes referred to as capitalized value) necessary to complete pension payments. When a pension is awarded this average amount is transferred from current funds to the Pension Fund. All payments of pensions are made from the Pension Fund. Since the amount transferred in any one instance is the average amount required, no re-transfer is made should a residue be left at the expiry of the pension, nor is any additional transfer made should the amount be exhausted before expiry of the pension.

Particulars of Pension Fund

Table 10 gives particulars of the Pension Fund for each class. The balance in the fund at the commencement of 1940 was \$24,838,874.49; \$2,461,542.51 was transferred during the year for pension awards; \$1,260,480.73 interest was added and \$2,373,523.36 was paid for pensions. The balance in the fund at the end of the year was \$26,187,374.37.

The transfers for pension awards during the year included \$108,541.58 from Silicosis Account to provide for pensions in cases of Silicosis in Class 5.

Disaster Reserve

The Disaster Reserve is a fund set aside under the provisions of Section 101 (2) of the Act to meet any unforeseen disaster or other circumstance which might unduly burden the employers in any class of industry. The fund has been accumulated by a transfer of one per cent. of the gross assessments up to the end of 1922, and for the year 1928. These are the only moneys set aside or held by the Board which do not directly cover liabilities actually incurred by reason of accidents which have already happened.

The standing of the Disaster Reserve is shown in Table 11. The balance at the end of 1940 was \$239,782.27; \$11,451.18 interest being added to the \$228,782.11 in the fund at the beginning of the year, and \$1,365.25 being withdrawn.

Reserve for Depreciation of Securities

During 1936 a reserve for depreciation of securities was established. This reserve is made up of excess over book values when investments are sold, and up to 1939 of excess interest not allocated to the Pension Fund, Disaster Reserve, and Compensation Deferred. Withdrawals are made on refunding debentures to "write up" values to market conditions. During the year was added \$11,872.38 excess over book values of sold investments, and \$77,651.99 was transferred to Investment Account. The Reserve at the beginning of 1940 was \$965,468.56, and the balance in the Reserve at December 31, 1940, was \$897,708.95.

Compensation Deferred

The funds included under "Compensation Deferred" comprise compensation moneys held at interest for claimants in Schedule 1, payment being deferred to a future time by reason of the claimant being a minor or for other reasons. The condition of the fund is shown in Table 12.

At the beginning of the year the amount on hand was \$60,950.02; deferred awards during the year amounted to \$75,156.78, and \$950.67 interest was added during the year; the payments during the year amounted to \$57,084.25, of which \$56,561.60 was for principal and \$522.63 for interest, leaving a balance of \$79,973.24.

A considerable portion of the funds included under "Compensation Deferred" do not bear interest, payment of principal being deferred to the future.

Silicosis Account

Table 15 gives particulars of the Silicosis Account which was established to take care of special assessments and payments in Class 5 necessitated by the addition of "Silicosis" contracted in mining operations to the list of industrial diseases under the Act, by amendment effective April, 8, 1926.

The balance in the account at the beginning of 1940 was \$2,528,316.52; \$555,548.76 was collected by assessment; \$228,196.65 was paid out (or transferred to Pension Fund) for compensation; \$19,724.84 for medical aid; \$77,868.66 for salaries and expenses in connection with examinations of underground mine-workers; \$16,572.08 was transferred to the Accident Fund for the expenses of supervision and handling claims; \$5,051.55 was paid for salaries and expenses of the Referee Board and \$600.00 was outstanding as accountable warrants to members of the staff. The surplus in the account December 31, 1940, was \$2,652,147.01, against which there were liabilities as follows:

Held to meet incurred losses	\$2,195,321.56
Held to meet losses and expenses in 1941	879,141.02
Total	<u>\$3,074,462.58</u>

leaving a deficit in the account of \$422,315.57, which will be covered by assessment and interest credits during 1941.

Investments

Particulars of the Board's investments are given in Table 14.

The total invested at the end of the year in Schedule 1 was \$35,704,661.97, consisting of \$34,376,204.27, value of investments at the beginning of the year, \$1,966,515.67, invested during the year, less \$560,425.98 principal returned, and \$77,651.99 written off for depreciation.

Particulars of each investment are shown in the list, including kind of investment, particular security, face rate of interest, term, par value, and book value.

With the exception of short-date deposits of current funds intended for use before the current year's assessments are received, all investments consist of Province of Ontario debentures, municipal or municipally-guaranteed debentures, and Dominion of Canada guaranteed bonds.

The average rate of interest received on permanent investments in Schedule 1 during 1940 was approximately 4.52 per cent., as compared with 4.38 per cent. in 1939, and 4.41 per cent. in 1938. A nominal half of one per cent. is received on current bank balances.

Schedule 2 Funds

The funds handled by the Board in respect of Schedule 2 industries include employers' deposits for pensions required to be made with the Board under the provisions of Section 28 of the Act, temporary deposits or advances of money made by employers under Section 32 to facilitate prompt payment of claims, and claimants' moneys held by the Board in cases of awards, payment of which by reason of the claimant being a minor, or for other reason, is deferred to a future time.

The standing of Schedule 2 funds at December 31, 1940, is shown in the latter part of Table 9, and the particulars and a list of Schedule 2 investments are given in Table 14.

At the end of 1940 the deposits held under Section 28 amounted to \$3,236,681.46; deposits under Section 32 to \$40,087.83; the amount of claimants' moneys held by the Board was \$12,607.96; and \$206,877.40 reserve for depreciation of securities, making a total of \$3,496,254.65, of which \$3,480,327.71 was held in permanent investments, and \$15,926.94 cash in bank.

The rate of interest distributed to Schedule 2 Funds, not including reserve for depreciation of securities, during 1940 was 5.655 per cent., as compared with 4.92 per cent. distributed during 1939 and 1938.

CHAPTER V

1939 OPERATIONS

This chapter deals with the year 1939, containing information which was not available when the report for that year was made.

It gives the final financial statement for Schedule 1 industries for the year, estimates of the adjustments of assessments and of the outstanding compensation and medical aid having to be used in the provisional statement given in Table 1 of the 1939 report; and it gives statistical information as to the accidents which happened during 1939, their causes, the nature of the injuries suffered, the number, time loss, total and average cost of the different classes of cases, and the age, wage, nationality, and marital condition of the injured workmen.

This information is contained in Tables 15 to 26.

Final Financial Statement, Schedule 1, 1939

Table 15 gives the final financial statement for Schedule 1 industries for 1939, provisional figures for which were given in Table 1 of the 1939 report. It shows the income and credits and the expenditures and charges and the balance for each class of industry; also the actual assessments and accident cost and other items of income and expenditure for each class, and the assessments and accident cost for each group of industry within the class. The list of industries included in each class and group will be found in the Board's rate book, the list of industries in the different classes is also printed with the Act, and their general nature is indicated at the bottom of Table 1 of this report.

The net income and credits for all classes for the year were \$6,129,577.52, and the net expenditure and charges \$6,035,438.42, leaving a surplus for the year of \$94,139.10. Adding the surplus forward from prior years of \$3,645,598.97, leaves a net actual surplus of \$5,757,758.07, as compared with a provisional or estimated surplus of \$2,648,711.01, the disparity being largely due to claims (especially for pneumoconiosis) for accidents occurring in 1939 and prior years not being finally disposed of in 1940.

Assessments and Accident Cost

The assessments and accident cost (the latter comprising compensation and medical aid and payments on account of rehabilitation but not including payments from the Silicosis Account) in Schedule 1 for each year since the commencement of the Act, and the totals to the end of 1939, are as follows:

Year	Assessments	Accident Cost
1915.....	\$1,851,537.52	\$1,091,020.43
1916.....	2,561,463.20	1,880,004.37
1917.....	2,662,383.29	2,639,560.56
1918.....	3,303,575.83	3,214,427.57
1919.....	3,840,949.07	4,474,847.38

1936.....	6,075,763.79	4,543,669.26
1937.....	5,728,493.82	5,321,732.42
1938.....	6,303,914.88	5,351,350.47
1939.....	5,830,424.56	5,371,473.15
Totals.....	\$116,135,676.89	\$109,073,203.44

Pay Roll and Rates of Assessment

As assessments are in the form of a percentage of pay roll, the average rate paid by the employers in Schedule 1 can be determined by dividing the total assessments for the year by the total pay roll. The following table shows the total amount of pay roll and the total assessments and the average rate for \$100 pay roll for each year:

Year	Total Pay Roll	Total Assessments	Average Rate per \$100
1915.....	\$147,603,000	\$1,831,537.52	\$1.24
1916.....	220,840,000	2,361,463.20	1.07
1917.....	286,903,000	2,662,383.29	.93
1918.....	310,450,000	3,303,575.83	1.06
1919.....	325,226,000	3,840,949.07	1.18
1920.....	464,589,000	5,579,333.45	1.20
1921.....	355,259,000	4,594,452.37	1.29
1922.....	391,888,000	5,984,594.64	1.02
1923.....	454,163,000	3,771,321.09	.87
1924.....	386,318,000	4,524,700.86	1.17
1925.....	390,652,000	4,390,854.75	1.04
1926.....	424,926,000	5,167,126.64	1.22
1927.....	455,016,000	5,465,763.17	1.20
1928.....	504,102,000	6,739,696.80	1.34
1929.....	559,429,000	7,505,451.10	1.34
1930.....	472,742,000	6,396,105.73	1.35
1931.....	389,740,000	4,608,677.15	1.18
1932.....	317,605,000	3,292,509.25	1.04
1933.....	288,917,000	2,729,936.41	.94
1934.....	346,735,000	4,192,200.35	1.21
1935.....	386,782,000	5,254,667.17	1.36
1936.....	410,792,000	6,075,763.79	1.48
1937.....	517,621,000	5,728,493.82	*1.11
1938.....	481,215,000	6,303,914.88	1.31
1939.....	550,040,000	5,830,424.56	1.06

*The decrease in rate for 1937 was due to refund of penalty assessments under a differential rating plan in force during 1936 and 1937 and abrogated during 1938.

Final Accident Figures, 1939

Table 16 shows the number of accidents happening in 1939 (in all industries under the Act) for which payment of compensation or medical aid was made. The total number was 53,110, of which 215 were death cases, 1,020 involved some degree of permanent disability, 21,205 temporary disability cases, and 30,672 cases which involved medical aid only. Ordinarily Schedule 2 cases involving medical aid only are not included, as in these cases medical aid is furnished directly by the employer.

The complete figures for each year since the commencement of the Act are as follows:

Year	Medical Aid Only	Temporary Disability	Permanent Disability	Death	Totals
1915	*	9,311	1,539	296	10,946

*No Medical Aid.

†Half Year Only.

Accident Frequencies, Schedule 1

Comparison of accident frequencies can be made by correlating the number of accidents with the total number of full-year workers, data for this being available, however, only in Schedule 1. Eliminating accidents in which medical aid only was paid, the number of accidents for each 100 full-year workers for the different years are:

Year	Temporary Disability	Permanent Disability	Death	Totals
1915	5.65	.58	.12	4.32
1916	4.99	.79	.10	5.88
1917	5.78	.72	.07	6.57
1918	5.81	.66	.07	6.54
1919	5.81	.68	.07	6.56
1920	6.23	.67	.07	6.97
1921	6.25	.60	.05	6.90
1922	5.82	.52	.06	6.40
1923	6.02	.51	.05	6.58
1924	6.08	.54	.06	6.68
1925	5.94	.51	.05	6.50
1926	5.84	.54	.05	6.43
1927	5.94	.53	.05	6.52
1928	5.85	.58	.07	6.50
1929	5.80	.61	.06	6.47
1930	5.08	.66	.07	5.81
1931	4.28	.56	.04	4.88
1932	3.59	.45	.03	4.07
1933	3.22	.37	.03	3.62
1934	3.94	.37	.04	4.35
1935	4.18	.19	.04	4.41
1936	4.31	.16	.04	4.51
1937	4.47	.18	.04	4.69
1938	3.75	.17	.05	3.97
1939	3.33	.17	.03	3.53

On the same basis of calculation, the frequency of medical aid only cases has been: 1918, 3.66; 1919, 3.70; 1920, 4.26; 1921, 4.24; 1922, 4.67; 1923, 4.96; 1924, 5.84; 1925, 6.09; 1926, 6.37; 1927, 6.73; 1928, 7.09; 1929, 7.06; 1930, 6.84; 1931, 5.72; 1932, 5.06; 1933, 4.94; 1934, 5.65; 1935, 6.16; 1936, 6.55; 1937, 6.63; 1938, 5.97; 1939, 5.56.

Statistical Distributions

Tables 17 to 26 give statistical details regarding accidents and workmen, including, where the data is available, Schedule 2 and Crown cases as well as Schedule 1. Considerations of space preclude more extensive tabulations, but the original material is retained and still fuller information is always available concerning the accidents in any of the different classes of industry.

Month of Occurrence

Table 17 gives the month of occurrence of all accidents. The month in which the greatest number of accidents occurred during 1939 was October, with 5,536, and the month with the lowest number was April, with 3,112.

Accidents According to Locality

The distribution of accidents according to the county or district in which they occurred is contained in Table 18. York had the highest number, with 15,259, and next in order were: Temiskaming-Cochrane, with 5,946; Wentworth, with 2,905; Thunder Bay, with 2,426; and Essex with 2,398. The greatest number of deaths (35) were in Temiskaming-Cochrane; there were 27 in York; 17 in Thunder Bay; 15 in Sudbury; and 9 in each of Lincoln and Welland.

Time Loss, Age, and Wage

In Table 19 are given the average age and wage of workmen receiving compensation and the total and average time loss for each class of industry, and for each category of disability. The average age for 1939 was 36.28 years. The average wage for 1939 was \$20.40, as compared with \$19.84 for 1938, and \$19.97 for 1937. The total time loss in temporary disability cases was 572,535 days, or an average of 27.00 days, as compared with an average of 27.07 days in 1938 and 27.25 days in 1937.

Compensation and Medical Aid Costs, Schedule 1

Table 20 contains the total and average cost of compensation and medical aid by classes in Schedule 1 for each kind of disability.

The total cost of all accidents was \$5,571,473.15, of which \$4,201,888.72 was for compensation (including payments for rehabilitation but not for silicosis cases) and \$1,169,584.45 for medical aid (except in silicosis cases).

Of the \$4,201,888.72 compensation cost, \$1,812,604.85 was for temporary disability cases, \$1,675,797.70 was for permanent disability cases, and \$715,486.17 was for death cases.

The average cost of temporary disability cases was \$141.69, of which \$100.39 was for compensation and \$41.30 was for medical aid, the average in 1938 being \$125.74.

The average cost of permanent disability cases was \$2,055.51, of which \$538.81 was for temporary disability, \$1,457.55 was for permanent disability, and \$257.37 was for medical aid.

The average cost of death cases, where there were dependants, was \$5,971.55, and the average cost of all death cases was \$4,558.87, of which \$28.29 was for

temporary disability, \$129.91 for burial expenses, (including transportation of body), \$4,273.39 for death benefits, and \$127.28 for medical aid.

The average cost of all cases in which compensation was paid was \$271.01, of which \$219.43 was for compensation, and \$51.58 was for medical aid, as compared with \$266.54 for 1958 and \$213.65 for 1957.

The average cost of medical aid in medical aid only cases was \$6.03, as compared with \$5.99 in 1958 and \$5.76 in 1957.

Allegiance of Injured

Table 21 shows the allegiance of injured workers who received compensation, as taken from their own reports. There were 20,559, or nearly 91 per cent. of British allegiance, and 2,079 of foreign allegiance. Among the aliens the most numerous were: Finns, Poles, Russians, (including Ukrainians), Italians, Jugoslavians, and Czecho-Slovaks.

Sex and Marital Condition of Injured

Table 22 gives the sex and marital condition of those receiving compensation. There were 21,775 males and 663 females. Of the males, 12,925 were married and 172 of the females. There were 390 widowers and 37 widows.

Duration of Disability

Table 23 shows the week of termination of temporary disability cases. In nearly 41 per cent. of the cases the disability terminated in from one to two weeks. In 45 cases the disability lasted for more than a year.

Nature of Injuries

The first part of Table 24 shows the number of various kinds of temporary disability injuries in the different classes of industry; the second part gives an analysis of the permanent disability cases, showing the number of injuries to the several parts of the body and the percentage of impairment of earning capacity; and the third part of the table shows the number and nature of the industrial disease cases.

In 1959, there were 6,365 cuts, lacerations, and punctures; 3,738 bruises, contusions and abrasions; 3,522 fractures; 3,703 sprains, strains, twistings and wrenchings; 1,402 crushes; 778 scalds and burns; 607 injuries to eyes; 176 dislocations; and 396 herniae.

Among the 1,020 permanent disability cases were 13 permanent total disability cases, and 355 exceeded ten per cent. of working capacity.

There were 24 industrial disease cases, of which 12 were temporary disability cases, 7 were permanent disability cases, and 5 were death cases. Included in these totals are 13 cases of silicosis and pneumoconiosis, 10 cases of lead poisoning, and 1 case of cyanide poisoning.

Causes of Accidents

Table 25 gives the prime causes of accidents in 1959. Machinery was responsible for 11,588 out of a total of 53,110, or nearly 22 per cent. of all cases, as compared with 22 per cent. in 1938, and 18 per cent. in 1937.

Death Cases

The nature of awards, the number, relationship, and residence of dependants, are shown in Table 26.

AUDITOR'S CERTIFICATE

13th March, 1941.

THE WORKMEN'S COMPENSATION BOARD OF ONTARIO,
Toronto, Ont.

Dear Sirs:

I have completed a continuous audit of the books of the Board for the year ended 31st December, 1940, and have obtained all the information and explanations I have required.

In my opinion the attached statements of Receipts and Payments, Table 6, Schedules No. 1 and No. 2, truly and fairly set forth the cash transactions of the Board for the year ended 31st December, 1940.

Bank balances at the close of the period have been verified by direct communication with the Board's bankers.

The amortized book value of the investments held by the Board at 31st December, 1940, was \$59,184,989.68 and I confirmed by a physical examination the securities representing these investments as at that date. Debenture principal and coupons, due and unpaid at 31st December, 1940, amounted to \$115,251.28.

Respectfully submitted,

ALEXANDER G. CALDER,
Chartered Accountant.

Ontario Department of Agriculture

REPORT
OF THE
Ontario Veterinary College
1939

PRINTED BY ORDER OF
THE LEGISLATIVE ASSEMBLY OF ONTARIO
SESSIONAL PAPER No. 29, 1941

ONTARIO

TORONTO

PRINTED AND PUBLISHED BY
T. E. BOWMAN, PRINTER TO THE KING'S MOST EXCELLENT MAJESTY

1940

REPORT OF THE

Ontario Veterinary College

TO THE HONOURABLE P. M. DEWAN,
Minister of Agriculture.

Sir:—

I have the honour to present herewith the following report of the Ontario Veterinary College for the year extending from April 1st, 1939, to March 31st, 1940.

Convocation

At the Convocation of the University of Toronto, held on May 12th, 1939, the Chancellor, The Rt. Hon. Sir William Mulock, P.C., K.C.M.G., M.A., LL.D., conferred the degree of Bachelor of Veterinary Science (B.V.Sc.) on sixty-five graduates. The Hon. P. M. Dewar, Minister of Agriculture, addressed the graduating class.

Commencement

The Annual Commencement and Presentation of Prizes took place on November 22nd, 1939, in the Assembly Hall of the College. The Hon. P. M. Dewar, Minister of Agriculture, in his address to the students, emphasized the value of education in the development of self-control and good character. A. E. Cameron, V.S., M.C., Veterinary Director General, also spoke briefly on the importance of the veterinary profession in public service. The prizes won by students were presented by R. W. Gladstone, M.P. for South Wellington. He congratulated the prize winners and urged them to prove worthy of their awards and to be helpful to others.

Student Enrolment

A total of 261 students were in attendance. As in former years, students were enrolled from all the Provinces of Canada. The requirements for entrance and graduation have been raised in order to regulate the attendance more effectively.

The Teaching and Executive Staff

The members of the staff of the different departments are as follows:

- C. D. MCGILVERAY, M.D.V., D.V.Sc., Principal: *Contagious Diseases, Sanitary Science.*
W. J. R. FOWLER, B.V.Sc., D.V.M.: *Anatomy and Surgery.*
H. E. BATT, V.S., B.V.Sc.: *Zoology, Histology, Meat Inspection.*
R. A. MCINTOSH, M.D.V., B.V.Sc.: *Diseases of Cattle, Obstetrics, Therapeutics.*
F. W. SCHOFIELD, B.V.Sc., D.V.Sc.: *Pathology, Bacteriology.*

- L. STEVENSON, B.V.Sc., M.S.: *Physiology.*
 A. A. KINGSCOTE, B.V.Sc., D.V.Sc.: *Parasitology, Pathology.*
 J. S. GLOVER, B.V.Sc.: *Poultry Diseases, Milk Hygiene.*
 V. R. BROWN, B.V.Sc.: *Anatomy, Hygiene.*
 G. CHILDS, B.V.Sc., M.R.C.V.S.: *Sporadic Diseases, Hygiene.*
 T. L. JONES, B.V.Sc., M.Sc.: *Bacteriology.*
 A. F. BAIN, B.V.Sc.: *Bacteriology.*
 R. T. INGLE, B.V.Sc., M.Sc.: *Pathology.*
 F. J. COTE, B.V.Sc.: *Canine and Feline Diseases.*
 J. K. BLAIR: *Jurisprudence.*
 A. L. SHEPHERD: *Executive Clerk.*
 MISS E. SLEEMAN: *Secretary.*
 MISS L. NOTT: *Librarian.*
 MISS M. URQUHART: *Stenographer.*

Courses of Study and Instruction

The prescribed course of study for the degree of Bachelor of Veterinary Science (B.V.Sc.) extends over a period of five years. In the case of candidates submitting Pass Matriculation certificates, they may be admitted to the first year, while candidates submitting Honour Matriculation certificates, or who have completed one or more years in a recognized college or university, may be admitted to the second year of the five-year course.

A detailed outline of the entrance requirements and the course of studies is contained in the college calendar, which is available to those interested. In addition to the regular undergraduate course outlined in the calendar, special short courses were provided as follows:

Special Public Health Course

During the month of May an arrangement was made whereby the staff of the Department of Health provided a course in Public Health Work for graduate veterinarians. There were 65 in attendance and the subjects of instruction were as follows:

- Public Health Administration.*
Principles of Sanitation.
Communicable Diseases.
Food-Borne Infections.
Interpretation of Laboratory Findings.
Bacteriology of Enteric-Infections.
Human Parasitic Infections.
Inspection of Water Supplies.
Inspection of Sewage Disposal.
Inspection of Restaurants and Bottling Plants.
Industrial Hazards in Meat Packing Industry.
Ventilation and Fumigation.
Dairy Sanitation.

Special Course for Fur Breeders

During the month of June a course was provided for those engaged in the rearing of fur-bearing animals. About 110 fur breeders attended. The course was arranged in co-operation with the Ontario Fur Breeders' Association and comprised lectures and demonstrations on the following subjects:

Mink Mating and Its Preparation.
Mink Raising Problems.
Problems in Making Good Pelts.
Mink Pelts Demonstration.
Research Work with Fur Animals.
Food Poisoning Investigations.
Projects at Government Illustration Stations.
Principles of Fox Breeding.
Fox Raising Problems.
Controlling Disease in Fur-Bearing Animals.

Special Course for Veterinarians

During the month of July a special course for graduate veterinarians was provided in co-operation with the Ontario Veterinary Association. There were approximately 125 in attendance and the programme comprised the following topics:

Chemical Tests for Urinalysis.
Encephalomyelitis of Horses.
Plans for the Control of Bang's Disease.
Treatment and Control of Parasitic Diseases.
Modern Methods Employed in the Sanitary Control of Dairy Products.
Enteritis of Cats.
Kennel Management and the Control of Distemper.
Diseases of Swine.
Regional Anatomy for Intravenous Medication.
The Relationship of Faulty Nutrition to Disease.

During the months of December and January a series of lectures and demonstrations were given to students attending the Farmers' Short Course and Dairy Course at the Ontario Agricultural College. The course embraced the following topics:

Prevention and Control of Animal Insect Pests.
Mineral Deficiencies Affecting Farm Animals.
Preventable Diseases of Horses and Cattle.
Preventable Diseases of Sheep and Swine.
Care and Management of Breeding Animals.
Care and Management of the Young at Birth.
Cleaning and Disinfection of Stables.
Examination of Horses for Soundness.

Research and Investigation

During the year considerable time was devoted to research and investigational work. Some of the diseases receiving attention are briefly summarized herewith and detailed reports relating thereto are appended separately.

Malignant Equine Influenza: Two outbreaks of influenza affecting horses were found to be of unusual interest on account of their malignant character. A report of these is appended.

Isolation of the Virus of Equine Encephalomyelitis by Blood Culture: A report is submitted describing a method for the isolation of the Eastern strain of encephalomyelitis virus. The chief advantages of the method are that the virus may be isolated during the course of the disease, hence the isolation and diagnosis may be made much earlier than when post-mortem methods are employed.

Fatalities Among Piglets Due to Overdoses of Iron: Quite frequently losses have been reported among suckling pigs following the administration of reduced iron as a preventive against anemia. In all of the cases investigated, the amount of iron had been far in excess of the prescribed dose. Experiments made indicate that even a fairly large dose of reduced iron does not have a fatal effect upon perfectly healthy pigs. However, pigs with poor resistance or which have a sub-clinical infection may succumb rapidly to an overdose.

Prevailing Diseases of Swine: During the year, more especially throughout the fall and winter months, diseases of swine were particularly stressed. The diseases which most frequently came under observation were hog cholera, swine erysipelas, necrotic enteritis, and swine plague. A report is submitted dealing with some of the important aspects of swine diseases.

Experimental Hemorrhagic Septicemia in Swine: A large number of experiments have been undertaken to produce typical hemorrhagic septicemia infection in swine. These experiments indicate that it is extremely difficult to reproduce in healthy swine a disease comparable to the natural infection with hemorrhagic septicemia. The results are described in an appended report.

Fatal Anaphylaxis Following the Use of Anti-Hemorrhagic Septicemia Bacterin: Two occurrences of severe fatal anaphylaxis are described involving the loss of several animals. Attention is drawn to the seriousness of such unfortunate consequences during immunization and the necessity for guarding against anaphylactic shock is emphasized.

Stiff Lamb Disease and Aposphorosis: An outbreak of disease among lambs is reported which responded to the administration of large doses of phosphoric acid. The resemblance between stiff lamb disease and acute phosphorous deficiency is noted.

Clinical and Extension Service

This service has been developed to meet the needs of veterinarians and owners requiring assistance. The nature and extent of the services rendered are briefly summarized as follows:

Animal Clinics: Clinics are held each week throughout the college session to which animals of all classes may be brought for observation. All animals are carefully examined and medical treatment is prescribed and surgical operations performed as may appear desirable. The greater part of the clinical service is furnished during the session when the students are in attendance. Several case reports are appended to illustrate the scope of this useful work.

Horses: The majority of these were surgical cases, of which 175 were successfully treated. Approximately 100 visits were made to extend treatment to horses at the Ontario Agricultural College. In addition, 62 horses were vaccinated against virus encephalomyelitis.

Cattle: Many of the cattle cases represented herd conditions. Among the diseases predominating being Bang's disease, sterility, mastitis, calf scours, calf pneumonia, Johne's disease, actinomycosis, and hemorrhagic septicemia.

In co-operation with the various live stock breeders' associations,

definite plans have been arranged for the control of Bang's disease on an experimental basis, as follows:

1. By testing individual herds and segregating or removing the reactors.
2. By testing herds in prescribed areas and removing all reactors.
3. By the adoption of calfhood vaccination in badly affected herds.

A total of 25,519 cattle were tested under these plans and the results are contained in a separate report.

Swine: There has been a marked increase in the number of swine cases. These comprised surgical cases and many diseases affecting litters and herds. Among the diseases predominating were anemia of young pigs, gastro-enteritis, pneumonia, parasitism, nutritional deficiencies, hemorrhagic septicemia, swine erysipelas, necrotic enteritis, and hog cholera.

Sheep: The majority of these cases represented flock maladies and comprised parasitism, hemorrhagic septicemia, goitre, nutritional imbalances, pregnancy and lambing troubles.

Small Animals: Over 200 dogs and cats were submitted to the clinic for examination and treatment. While the majority were surgical cases, there were also a large number of disease conditions treated, including mange, eczema, distemper, chorea, gastritis, and dietary conditions.

Fur-Bearing Animals: The diseases and general welfare problems of fur-bearing animals on ranches were given all possible consideration. Considerable investigational work was undertaken relating to losses occurring on mink ranches in York and Perth Counties.. The disease proved to be distemper. The experimental use of hyperimmune serum and tissue vaccine as agents in the control of distemper was tried in both mink and ferrets but they appeared to be of doubtful value. Diagnostic work was also undertaken in the examination of specimens sent in for laboratory examination. The material submitted included food substances and fecal matter from fur-bearing animals. The laboratory work also included autopsies on 142 animals, as shown in the following outline:

Nature of Case	Fox	Mink	Rabbit	Total
<i>Parasitism</i>	3	9	2	14
<i>Pneumonia</i>	4	21		25
<i>Food Toxemia</i>	4	32		36
<i>Peritonitis</i>		4		4
<i>Uraemia</i>		13		13
<i>Distemper</i>		20		20
<i>Metritis</i>		2		2
<i>Nutritional Anemia</i>		10		10
<i>Streptococcal Infection</i>		4		4
<i>Dermatitis</i>	1			1
<i>Goitre</i>	2			2
<i>Vitaminosis</i>	2			2
<i>Acute Gastritis</i>	2	1		3
<i>Encephalitis</i>	1			1
<i>Intestinal Block</i>		1	1	2
<i>Acute Enteritis</i>		1		1
<i>Haemorrhage</i>		2		2
<i>Total</i>	19	120	3	142

A further service was rendered by the preparation and distribution of the following circulars to those interested in fur-bearing animals:

Pneumonia in Mink.
Distemper in Mink.
Streptococcus Infection in Mink.
Mink Breeding.
Acidosis in Mink.
The Maggot Fly.
Nursing Mothers and Young Mink.
Coccidiosis in Mink.
The Raccoon.
The Care and Management of Rabbits.
Disease of Rabbits.
Urinary Calculi in Fur Bearers.
Guinea Pig Breeding.
Chinchilla Breeding (chinchilla lanigera).

Biological Laboratory Service

Preparation of Antigen: Ninety-six thousand six hundred test doses of *S. pullorum* antigen, and positive and negative control sera, were prepared and supplied to registered veterinarians for the agglutination test of *S. pullorum* infection. Seventeen thousand test doses of *Br. abortus* antigen were distributed to veterinarians for the agglutination test for Infectious Abortion of cattle (Bang's disease).

Agglutination Tests: During the year 25,519 blood samples were submitted to the agglutination test for Bang's disease. Included in this number are 3,153 from cattle intended for Export or Exhibition purposes, and 3,933 from cattle in herds under Ontario Veterinary College supervision.

The results of these tests are as indicated in the following table:

Number of Samples tested		25,519
“ “ “ positive		3,802
“ “ “ doubtful		1,487
“ “ “ negative		19,899
“ “ “ unfit for testing		331

Routine Examinations of Milk and Cream Samples

Routine tests were made on 240 samples of milk and cream submitted to the laboratory from time to time. These tests included fat determinations, agar plate counts, coliform tests, methylene blue, resazurin, reductase and phosphatase tests.

Pathological and Bacteriological Examinations

During the current year 863 specimens were received for laboratory examination, as indicated in the following table:

Nature of Case	Cattle	Sheep	Horses	Swine	Dogs	Cats	Rabbits	Birds	Goats	Fox	Mink	Water	Feed Samples	Meat	Totals
<i>Parasitic Infestation</i>		3	1												4
<i>Coccidiosis</i>	3														3

Poultry Laboratory Service

This consists chiefly in the routine examination of diseased poultry sent or brought to the laboratory. No serious outbreaks of disease were encountered, but the incidence of coccidiosis, pullorum disease of chicks and nutritional ailments remains at about the same level. In a great many instances these conditions could have been prevented if proper control measures had been employed.

Advice is always given as to the handling of the flock to prevent the spread of infectious diseases.

The number of specimens received during the past year is greater than that of the previous year and the diseases dealt with are shown in the following list:

Nature of Case	Number of Cases
<i>Adult Pullorum Infection</i>	130
<i>Ascites</i>	21
<i>Avian Diphtheria</i>	3
<i>Cloacitis</i>	2
<i>Coccidiosis</i>	388
<i>Coryza and Roup</i>	41
<i>Enteritis</i>	27
<i>Enterohepatitis</i>	74
<i>Fowl Cholera</i>	40
<i>Laryngotracheitis</i>	30
<i>Leucosis</i>	100
<i>Pullorum Disease of Chicks</i>	568
<i>Tuberculosis</i>	33
<i>Other Infections</i>	74
<i>Egg Bound</i>	4
<i>Internal Laying</i>	23
<i>Impaction</i>	13
<i>Injuries</i>	12
<i>Nutritional Disorders</i>	490
<i>Poisoning</i>	4
<i>Prolapse</i>	13
<i>Ruptured Liver</i>	22
<i>Ruptured Oviduct</i>	3
<i>Tumours</i>	69
<i>Worm Infestation (Ascaridia)</i>	66
" " <i>(Capillaria)</i>	40
" " <i>(Large Tapeworms)</i>	46
" " <i>(Minute Tapeworms)</i>	149
" " <i>(Ascaridia and Tapeworms)</i>	52
<i>No Evidence of Disease or Putrid</i>	120
<i>Total</i>	2,657

Throughout the year an immense volume of correspondence has received attention, as well as daily personal interviews with those seeking advice. The demand for veterinary services, including research and extension work, has noticeably increased.

The entire staff has been busily engaged and have performed their duties faithfully. A high standard of efficiency has been maintained throughout, and all expenditures have been carefully supervised and kept at a minimum cost to the Province.

All of which is respectfully submitted.

C. D. MCGILVRAY,
Principal.

Guelph, Ontario,
March 31st, 1940.

CO-OPERATIVE PLANS FOR THE CONTROL OF BANG'S DISEASE

C. D. MCGILVRAY

In co-operation with live stock breeders and practicing veterinarians, the following plans are provided for the detection and control of Bang's disease.

Routine Testing of Individual Herds: This plan is available for the blood testing of herds by veterinarians in general practice for their clients. The blood samples are submitted by the veterinarian and the blood tests are made by the college staff. The results of the tests are reported on test charts furnished by the college. The tests conducted under this plan during the current year are as follows:

Total number of cattle tested	—	21,341.
“ “ “ “	negative	17,312 — approximately 81½%
“ “ “ “	doubtful	1,088 — “ 5%
“ “ “ “	positive	2,941 — “ 13½%

Supervised Testing of Herds in Prescribed Areas: Where a sufficient number of owners in a prescribed area desire to have their herds tested and supervised for the control of Bang's disease (Contagious Abortion in Cattle) the Department of Agriculture, through the Ontario Veterinary College, will co-operate with owners and their veterinarians under the following arrangement:

1. That a group of 10 or more owners occupying contiguous premises in a prescribed area may submit a petition or signed request on a form supplied by the Department signifying their desire to have their herds tested for the control of Bang's disease under the supervision of a qualified registered veterinarian.

2. Under the proposed plan the Department will assume payment of the veterinarian's fees at the rate of 20 cents for each animal tested or any other basis mutually agreeable, and will also provide the necessary test charts, the sterilized vials for the blood samples, and make the required agglutination tests, free of charge.

3. The cost or expense of any additional work or extra visits by the attending veterinarian, apart from that required in the actual testing of cattle for the control of Bang's disease, shall be borne entirely by the owner of the herd.

4. That owners will agree to have their herds placed under either one of the following plans, depending on the extent to which they are affected, as shown by the test results:

Terms Under Which Herds are Accepted:

Plan A:

1. By having all cattle in the herd over 12 months of age blood tested.
2. If less than 10% of the herd reacts to the test, that the reactors will be immediately removed from the herd.

3. That the herd be retested at intervals of 30 to 60 days until the entire herd is negative.
4. That any additional reactors be likewise removed from the herd.
5. That all reacting cattle be ear-marked with the letter B, or removed direct under a permit to an abattoir for slaughter without undue delay, and that they be kept segregated pending their removal.
6. That reacting cattle must not be sold to enter other herds in order to prevent them creating new centres of infection or disseminating infection.
7. That new additions to the herd be obtained only from other negative herds, or have been submitted to the test before being admitted to the herd, and be kept segregated for 30 days and again tested.
8. That the premises be thoroughly cleaned and disinfected from time to time as may be required.
9. That the cattle showing a definite reaction to the test shall not be retested.
10. That cattle showing a doubtful reaction to the test shall be retested again in from 30 to 60 days. Animals again doubtful to the retest may then be regarded as reactors and dealt with accordingly.
11. That the non-reacting cattle to the initial test shall be again retested in from 30 to 60 days after the removal of the reactors.
12. That after a negative test of the entire herd is obtained, that the herd shall be submitted to a further test in three months' time, and again in from three to six months' time, and to semi-annual or annual tests thereafter.
13. That cows shall not be taken to other herds to be bred unless they are definitely known to be negative herds and likewise no cows from other herds shall be bred unless they also are from known negative herds.
14. That when all the animals in a herd are negative to the test, owners will then be expected to take the necessary steps to have their herds listed as negative herds under the provisions and regulations of the Health of Animals Branch.
15. That failure on the part of an owner to comply with the purpose and intent of the plan for the control of Bang's disease in their herd shall be regarded as sufficient cause for the cancellation of Departmental help and co-operation.

Plan B:

1. In the case of any herd having over 10% reactors, and the owner is unable to bear the immediate sacrifice of so many of his cattle, that an agreement be entered into with the view of ultimately developing a clean negative herd from the non-reactors and the calves with the least material sacrifice.

AREAS ESTABLISHED

Under the foregoing arrangement three prescribed areas have been established, known respectively as:

1. Schomberg Area: Includes 38 herds comprising 543 cattle.
2. Durham Area: Includes 31 herds comprising 315 cattle.
3. Northumberland Area: Includes 55 herds comprising 870 cattle.

RESULTS OF TESTS IN PRESCRIBED AREAS

The tests of all cattle in these areas have not been completed as yet, and the results furnished cover only the Schomberg and Durham areas:

Total number of cattle tested	—	913.
“ “ “ negative	820	— approximately 90%
“ “ “ doubtful	66	— “ 7%
“ “ “ positive	27	— “ 3%

Following the completion of the initial tests, all reactors have been removed and further tests will be made at regular intervals until all reactors have been detected. Owners will then be expected to take the necessary steps to prevent reinfection and to have their herds listed as negative herds under the regulations of the Health of Animals Branch.

SELECTION OF HERDS FOR CALFHOOD VACCINATION

A selection and test was made of 201 herds comprising 7,954 cattle. Following the test the herds were grouped into two classes as being either *slightly affected* or *badly affected*.

(a) *Slightly Affected Herds*: In this class were included all herds containing less than 15% reactors. Following the initial test the reactors were removed and the doubtful ones segregated. Further tests were made in from 30 to 60 days until there were no further reactors. The owners were then advised to have their herds placed under the supervision of the Health of Animals Branch for further tests in order to have them officially listed as negative herds.

This group comprised 145 herds and the results of the initial test were as follows:

Total number of cattle tested	—	5,287.
“ “ “ negative	2,375	— approximately 92%
“ “ “ doubtful	101	— “ 3%
“ “ “ positive	144	— “ 5%

(b) *Supervised CalfhooD Vaccination in Badly Affected Herds*: In this class were included all herds containing over 15% reactors. Vaccination was restricted to calves between four and eight months of age. The vaccine used was Cotton's No. 19 strain *Brucella abortus*. Following vaccination the calves are being tested at regular intervals of from 30 to 60 days until their first gestation period is completed. The experimental or controlled use of vaccination was commenced during the month of May, 1938, and sufficient time has not elapsed to properly determine its value. This group comprises 56 herds containing 2,667 animals of which 999 were calves of vaccination age.

The results of the tests before vaccination were as follows:

Total number of cattle tested	—	2,667.
“ “ “ negative	1,686	— approximately 63%
“ “ “ doubtful	151	— “ 5%
“ “ “ positive	830	— “ 32%

Calves tested between 4 and 8 months of age:

Total number of calves tested before vaccination — 999.

“	“	“	negative	“	“	856	—	approx.	86%
“	“	“	positive	“	“	81	—	“	8%
“	“	“	doubtful	“	“	62	—	“	6%

Calves vaccinated and unvaccinated between 4 and 8 months of age:

Number of calves vaccinated	971
“ “ “ unvaccinated (controls)	28

Breeding records of vaccinated heifers (first pregnancy):

Number of vaccinated heifers bred	244
“ “ “ “ conceived	237
“ “ “ “ calved (normally)	84
“ “ “ “ aborted	1

Breeding record of unvaccinated (control) heifers (first pregnancy):

Number of unvaccinated (control) heifers bred	28
“ “ “ “ “ conceived	18
“ “ “ “ “ calved	12
“ “ “ “ “ aborted	3

COMMENTS ON THE RESULTS FOLLOWING VACCINATION

All owners were definitely requested to furnish a complete statement as to the results experienced in their herds. The replies received were all in complete agreement that no ill effects were observed in any of the calves following vaccination. Every owner likewise desired to continue having their calves vaccinated. In checking up the test results it does not appear to be of any particular significance whether the calves are negative or positive to the test before being vaccinated. A very considerable number (approximately 20%) of the calves negative to the test before vaccination remained negative for one month or longer after vaccination.

Some of these calves then became positive to one or more subsequent monthly tests and then became negative to further tests in about two or three months' time. Quite a number of the vaccinated calves seemed to shift from a negative phase to a positive phase from time to time, or from positive to negative from time to time. Likewise many of the calves positive to the test before vaccination were negative to the test within from 30 to 90 days following vaccination.

In fact, the test results in vaccinated calves of that age may not be of any particular significance. Under the plan being followed the vaccinated calves are being kept in the abortion affected herds and thus continually exposed to possible infection. After all, the value of calthood vaccination may ultimately require to be determined on the protection afforded in reducing the abortion rate in heifers during their first and second pregnancies.

In the meantime no difficulty has been reported by owners as to the vaccinated heifers failing to conceive to service.

DISEASES OF SWINE

F. W. SCHOFIELD AND R. T. INGLE

During the last few years diseases of swine have become a matter of ever-increasing importance. Most farmers now realize that pigs raised in a scientific manner may be quite a profitable undertaking. They are alert to the serious nature of disease and are usually willing to co-operate in methods of control and prevention.

The veterinarian, who only a few years ago was rarely called upon to treat sick swine, now finds that a good portion of his revenue is derived from this source. At the same time he is greatly handicapped by an inadequate knowledge of the common diseases of these animals. Anyone who has studied the infectious diseases of swine discovers that it is far from easy to make a correct diagnosis in many cases due to the similarity between the symptoms manifested in the acute infections. Even when the disease has been studied clinically and a careful post-mortem examination made, the bacteriological findings not infrequently upset the diagnosis which had been made on clinical and pathological grounds. True, there are typical cases of hog cholera, swine erysipelas and hemorrhagic septicemia which allow of ready diagnosis, but a large minority are atypical and confusing.

Due to a special grant from the Department of Agriculture, we have been able to carry on some special research into diseases of swine which we believe will be productive of good results as the work progresses. A brief note follows dealing with some important and interesting aspects of the most common diseases of swine which we have encountered during the past year.

HOG CHOLERA

During the winter months outbreaks of this disease occurred at many points in the western part of the Province. In many instances the outbreak was the first recorded for that particular area. The disease was chiefly spread through the medium of the small pig sales which in recent years have sprung up all over the Province. Operating in conjunction with the sales are the live stock truckers who become effective agents in spreading the disease. Many a farmer bought pigs from a trucker only to find out in a day or two that the pigs were diseased and that hog cholera had been introduced to the premises.

Mention should be made of the work already reported, in our finding a constant leuco-penia in cases of hog cholera.¹ This significant blood change was first reported by Kernkamp. Several others have confirmed his findings. In some cases a white cell count is a distinct aid in diagnosis. Petechial hemorrhages in the cortex of the kidney and in the mucous surface of the bladder proved to be the most diagnostic changes encountered at post-mortem. In over 200 post-mortem examinations made during the year the spotted kidney has only been seen on one occasion, apart from cases which later proved to be hog cholera.

SWINE ERYSIPELAS

This disease is definitely on the increase and is occurring among swine to a much greater extent than at present recognized. During the year

many outbreaks have been diagnosed either by clinical or bacteriological examination. The agglutination test with "Schroeder's antigen" has proved to be of definite worth in several doubtful outbreaks. In one outbreak the owner lost ten out of twenty pigs, and most of the remaining pigs exhibited a dry gangrene involving the skin of the back and extending from the tail to the ears. Hemorrhagic lesions in the skin, or the presence of numerous hive-like elevations of the skin with or without stiff or painful joints are the symptoms most frequently seen. Swine erysipelas serum has given uniformly good results in acute cases. The infection seems to persist for a long time in a piggery.

HEMORRHAGIC SEPTICEMIA

Acute and fatal infection of swine with the *P. suis* does undoubtedly occur in both young and mature swine. The organism is by far the commonest to be found in cases of chronic pig pneumonia. The frequency with which it is responsible for acute outbreaks of disease among swine is a debatable matter. Available evidence would indicate that it does not occur with anything like the frequency attributed to it. In our experimental work we have found it most difficult to infect healthy swine even when pure cultures of recently isolated strains are used.

The practice of inoculating swine with anti-hemorrhagic septicemia bacterin has become widespread among the farmers. It is purely empirical and should not be encouraged.

In the pulmonary form the lung shows congestion, hemorrhage and œdema. The lesions are much more marked in the anterior and medial lobes. The œdema is sometimes even more pronounced than in swine flu. The bronchial lymph nodes are acutely inflamed. In fact most of the body lymph glands shows acute inflammatory change. If the nasal passages are exposed acute rhinitis is commonly present. In the intestinal form there is an acute gastro-enteritis. This is frequently associated with some pulmonary change.

SALMONELLA INFECTION

This has not been common; only a few cases of genuine infection have been recorded.

SWINE FLU

This infection is quite common and in most cases the characteristic post-mortem appearance of the lungs is present. In one very large piggery every litter became ill at about two weeks of age. Coughing, high temperature, loss of weight and anorexia were the chief symptoms. The mortality was not high but the pigs failed to put on weight and remained in very poor condition. A tissue vaccine was prepared from the diseased lung in an early infection. This seemed to give good results when used as a preventive. The *H. suis* is not uncommonly found when culturing infected lungs.

PARASITES

Ascaris infection is now rarely found, the majority of farmers "worm" the pigs just before or after weaning. The beneficial results are very apparent. Also, general sanitation has greatly improved.

MORTALITY AMONG PIGLETS

We encountered a number of cases during the winter months of sows losing their litters a day or two after birth. Death was due to septicemia. The most prevalent organisms were streptococci, colon and *P. suis* septica.

In almost all cases the feed had been poor in quality. We believe that the absence of vitamin A was the chief cause for the lack of resistance. The frequent lack of any green feed for months at a time is a serious defect in the rations of many sows. Cod liver oil or some other vitamin-bearing food must be fed during the winter months. Concentrated cod liver oil such as haliver oil given during the first few weeks to the piglets frequently has very beneficial results.

In conclusion, we would say that there is a large and important field here and one that requires long, continued and systematic study before the many important problems which it presents can be solved.

FATALITIES AMONG PIGS FOLLOWING OVERDOSES OF IRON

F. W. SCHOFIELD AND R. T. INGLE

Since the recognition a few years ago of anemia as a very prevalent and fatal disease among piglets, iron, as a preventive, has been used on an ever increasing scale. In most cases the iron is administered by the owner who has little idea of the size of the correct dose. Iron as ferri reductum (reduced iron) is the form chiefly used, and this, due to its extremely fine nature, has a tendency to hold together so that large doses are easily administered. Unfortunately, due to the belief that iron was quite harmless, a carelessness in dosage frequently occurred and in quite a few instances with disastrous results.

The History in Fatal Cases. The history in most cases is very similar. The owner had treated the litter of pigs with reduced iron when four or five days old as a preventive against anemia. From six to twelve hours after the treatment the pigs which had been quite bright and healthy began to look sick. They were dull, listless, with occasional spells of shivering, and ceased to nurse. In from twenty-four to forty-eight hours they began to die. Sometimes the whole litter would succumb, in other cases just a few pigs were affected.

The quantity of reduced iron administered in these fatal cases varied greatly, but was usually between .5 gm. to 1.5 gm. Roughly from two to five times the maximum dose advocated.

What is the Cause of Death? At first we believed that the iron itself had been toxic, and death due to iron poisoning. This view had to be discarded, because such doses were frequently being given with no untoward results. The clue came with the study of the post-mortem lesions. In many cases examination of the carcass showed strong evidence of septicemia. Most of the body lymph glands were congested and œdema-

tous; acute congestion and œdema of the lungs was common, while in others varying degrees of gastritis and enteritis were present. Cultures made at death or shortly after showed various organisms, the chief being colon, streptococci and pasteurilla. These did not represent post-mortem invasion.

The conclusion at which we arrived was that iron in excess has a tendency to cause a break in the defence mechanism, allowing organisms already present in the respiratory tract or intestine to penetrate and cause serious infection.

The following case is cited as offering evidence which strongly supports this view:

Two litters of pigs, A and B, of approximately the same age and in equally good condition, were given reduced iron in excess, 1.5 gms. per pig, or five times the proper dose. In one litter (A) all of the pigs except one remained healthy, and this one which died had been transferred from the other litter (B). In litter B, within twenty-four hours all of the pigs—nine in number—were affected. They appeared dull, nursed with indifference and lay in the straw most of the time. Within forty-eight hours four of the nine pigs had died, the remainder recovered. Post-mortem examination of the pigs showed very marked congestion and œdema of the lungs with fluid in the thorax in every case. In two of the four there were different degrees of gastritis and enteritis, but in neither was the inflammation severe. The spleen was enlarged and dark in all cases. The kidneys were pale. Cultures from the lung gave pure colon in all cases. The colon did not represent terminal or post-mortem infection, as the pigs were in good condition. Further, a blood culture made from one of the sick pigs gave a pure culture of colon.

THE DISEASE REPRODUCED EXPERIMENTALLY

In this experiment, seven six-day-old pigs were used. They appeared to be perfectly healthy, but they were located on a farm where losses in piglets have frequently occurred during the last few years.

Three of these pigs were given by mouth 1.5 gms. of sulphate of iron, which is equivalent to 300 mgs. of Fe. All of these pigs died within forty-eight hours. The post-mortem findings were very similar to those seen in the natural cases described above. The organisms present were *P. suis* and *coli*.

Two pigs were fed reduced iron; one received 300 mg., the other 600 mg. Both of these pigs remained perfectly well.

One pig was given 300 mg. of iron as ferric chloride. This pig died in twenty-four hours. There was no indication of septicemia, and death was most likely due to the toxic effect of the iron.

Conclusions. (1) That overdoses — more than 300 mg. of reduced iron or 900 mg. of sulphate of iron — may cause death of piglets. (2) That death is not due to a direct toxic effect of the iron, but rather to an indirect effect upon the defence mechanism.

STIFF LAMB DISEASE—AN APHOSPHOROSIS?

F. W. SCHOFIELD AND A. F. BAIN

Noting the pronounced similarity in the gross appearance of the skeletal muscles in "stiff lamb" disease with that seen in "stiff calf" disease, we decided to treat the disease in lambs with phosphoric acid which had already given excellent results in the calves.

Stiff Calves. The cases occurred on a farm where for several years the owner had been losing nursing calves all showing the same symptoms of stiffness, myasthenia, paresis, emaciation and death. There was no elevation in temperature or other signs of infection. Post-mortem showed widely distributed degeneration of the skeletal muscles which were a pale pinkish gray in colour.

Samples of blood from the dams showed a deficiency in the inorganic phosphorus, an average of 3.7 mgs. The cattle did not show any signs of mineral deficiency. With the liberal feeding of bone-meal to the cows, and dilute phosphoric acid to the calves, there were no further losses.

Stiff Lambs. The stiff lambs occurred in a flock of about twenty ewes which were in very poor condition when purchased in the fall. They had been wintered on hay and mangels and had put on weight. Grain was fed for two weeks before lambing and for a few days after. The lambs were three weeks old and appeared well when put out to pasture. In three or four days time several of the lambs were noticed to be quite stiff in their movements. Within a week twelve lambs were affected. The symptoms were characteristic of stiff lamb disease.

Treatment. All of the lambs were given a dessertspoonful of dilute phosphoric acid in a little milk twice a day for three days, and then a teaspoonful twice a day for the remainder of the week. One of the worst cases, a weak lamb, died after marked improvement in locomotion. Post-mortem examination revealed pneumonia.

The remainder showed great improvement in three days, and in two weeks all had entirely recovered.

Unfortunately there were no controls, but the recovery was so remarkable that we report the cases hoping that it will interest others to try the same treatment for this obscure disease.

Inorganic phosphorous determinations made on the blood of the dams and the sick lambs gave inconclusive results. Ewes, phosphorus ranged from 3.57 - 6.80; lambs, from 5.88 - 9.0 mg. %.

THE RAPID ISOLATION OF THE VIRUS OF EQUINE ENCEPHALOMYELITIS

FRANK W. SCHOFIELD

Although the diagnosis of infectious diseases does not necessarily depend upon the isolation of the specific organism, the demonstration of

the specific bacterium or virus offers the most conclusive kind of evidence. In the disease which we are now discussing, accurate diagnosis by clinical observation, serological or other laboratory tests is not at present possible, the actual demonstration of the virus is therefore essential. It is true that when the disease occurs in epizootic form diagnosis on clinical and epizootological grounds is not difficult, but the diagnosis of isolated cases is a very difficult matter and usually requires the demonstration of the virus. The histo-pathological changes, while of great significance, are hardly specific enough to warrant a diagnosis in all cases. The isolation and designation of the virus is therefore of unique importance in the diagnosis of encephalomyelitis. A simple, accurate and rapid method of diagnosis is of great importance in both human and animal infection. The methods to be described have been worked out with these fundamental requirements constantly in view. Whether the methods described will prove to be equally applicable to the disease as it affects man must be determined in the future.

ISOLATION BY BLOOD CULTURE INTO THE GUINEA PIG AND CHICK EMBRYO

The advantage of this method is obvious in that it enables a diagnosis to be made while the disease is in the earliest stage. One does not have to await the death of the animal as in other methods. Moreover, should the animal recover, one is not cheated of the information desired.

Blood is drawn directly from the jugular vein into a sterile 50 cc. vacuum bottle containing 5cc. of 5% sodium chloride. Fifty cc. is the quantity usually drawn. It is very important that the sample be taken during the first few days of the disease, i.e., during the febrile period. At this time the virus may be demonstrated in quantities as small as .01 cc. The virus will remain viable in the citrate solution at summer temperatures for at least four days. A small quantity of the blood — .1 cc. — is inoculated aseptically into each of several eggs which contain eight to ten-day chick embryos. A similar quantity is inoculated intra-cerebrally into several guinea pigs, while 10 cc. of the blood is inoculated intra-peritoneally into the same animals. The eggs are candled at 24 and 48 hours to see whether the embryo is alive or dead. If dead the embryo is removed and examined for the typical hemorrhage lesions on the skin, cultured aerobically and anaerobically, then frozen at about -5° C. Emulsions are made from the chick or membranes up to 10^{-5} , filtered, and guinea pigs inoculated which have been immunized against the Eastern and Western strains respectively. Or specific immune sera — Eastern and Western — is added to the emulsion dilutions and guinea pig protection tests carried out.

The guinea pigs which have been inoculated are kept under observation and the temperature taken night and morning. Pigs coming down with infection usually show a rise in temperature — 103° - 106° F. — commencing on the second or third day. Anorexia, depression and paresis usually accompany the fever. The majority of the guinea pigs inoculated die in a state of paralysis in from four to ten days. The pigs should be kept under observation for at least three weeks, as when a very small quantity of the virus is present symptoms and death may be greatly delayed. This, however, chiefly in animals which are inoculated intra-peritoneally.

It is important to note that the blood culture technique has only been employed in the isolation of the Eastern type of virus. It remains to be seen whether it can be used successfully in isolating virus of other types.

MALIGNANT EQUINE INFLUENZA

F. W. SCHOFIELD

An unusual outbreak of what was diagnosed as influenza occurred in a large stable of work horses. No new additions had been made, and none of the animals had been off the estate, so that the source of infection remained unknown. The clinical picture was not that of influenza, but that of a severe septicemia, especially so in the first two cases.

Case 1. Nine-year-old gelding in good condition. Had worked all day and seemed perfectly well. Evening meal refused. Temperature $100\frac{3}{5}^{\circ}$, pulse 56, breathing slightly accelerated. Appeared sleepy and depressed, and was undoubtedly a sick horse. The eye was slightly congested and jaundiced. There was no discharge from the nostrils. On the following day the depression was more marked, and there was an anxious expression on the face. The temperature remained the same. Laxatives and stimulants were given. On the third day the horse lay down, and was unable to rise. Temperature 100° , pulse weak and fast, respiration accelerated. The horse died during the night after struggling violently for some hours.

Post-mortem showed some congestion of the lungs, the trachea and bronchii were covered with echymoses and petechial hemorrhages. The abdominal viscera were normal.

Malignant influenza. Section of trachea showing hemorrhages.

Case 2. A fourteen-year-old gelding in good condition. Had worked all day and was only noticed to be sick in refusing the evening meal. Examination showed temperature 102° , pulse 60, and respiration slightly increased. The head was down and the animal appeared to be quite sick. On the following day the patient was definitely worse; there was constant spasm of the diaphragm, slight muscular tremors, especially of the pectoral muscles, and marked depression. Inco-ordination of movement was pronounced and the animal rapidly became delirious, unmanageable, and went down. After a few hours of violent struggling the horse died, just twenty-eight hours after the onset of the disease.

Post-mortem examination showed the same ecchymoses and petechial hemorrhages of the trachea and bronchii. Petechial hemorrhages were also present in the adipose tissue and fascia in the sub-scapular region, the flank and the thigh. Some of the hemorrhage was due to bruising, but much was deep-seated.

Case 3. Roan gelding weighing about 1,850 pounds, in good condition, and had worked all day, but noticed not to eat the evening meal. Examination showed temperature 106° F., pulse 60, respiration slightly increased. There was marked depression, the patient frequently moved from foot to foot. On the following day the temperature was $106\frac{3}{8}^{\circ}$, the legs were slightly swollen, and when walked the animal seemed stiff. The eye was definitely congested, and the depression was more pronounced. At this time, 3 p.m., anti-influenza serum, 200 cc., was given intravenously. Observed at 11 p.m., the temperature was down to 103° , the patient was eating a little hay and appeared bright. A further inoculation of 100 cc. was given on the following day. The horse made a rapid and complete recovery.

Case 4. Brown mare, in good condition, had worked all day, but was noticed not to eat the evening meal. Examination showed temperature 106.2° , pulse 60, and marked depression. The legs were slightly stocked. Muscular tremors were frequent. On the following day the condition was the same with the addition of a slight watery discharge from the eyes and nose. Anti-influenza serum, 200 cc., was given intravenously. In sixteen hours the temperature had dropped to 102.4° , pulse 46, and the patient was bright and eating mash and a little grass. Within a few days recovery was complete.

At this time every horse in the stable was examined, the temperature taken, and 5 cc. of anti-influenza bacterin given. No further cases developed.

Bacteriological Findings. Cultures made from the trachea gave *P. equiseptica* and *S. equirilus*, with a few colonies of a hemolytic streptococcus. A guinea pig injected into the thorax with a scraping from the trachea died in thirty-six hours with acute sero-fibrinous pleurisy. *P. equiseptica* was present in pure culture.

A seven-year-old gelding was inoculated intravenously with 20 cc. of blood taken from the third case. Five days later this horse developed a temperature of 103° . The temperature varied from 103° to 105° for the following three days, and then subsided. No other symptoms were noticed

except a slight watery discharge from the nose which continued for a few days.

Blood Examination. A white cell count in two cases showed no appreciable variation from the normal.

The severity of the infection, the absence of the usual symptoms of equine influenza and the remarkable response to the serum made these cases of peculiar interest. Several similar outbreaks have been reported during the last few months.

DISTEMPER IN MINK

LIONEL STEVENSON AND F. W. SCHOFIELD

During the spring and summer months a number of serious outbreaks of distemper occurred on the mink ranches in this province. For some time doubt was expressed as to whether the epizootic was true distemper. This important point was definitely settled by the use of ferrets as experimental animals. The ferret is highly susceptible to distemper and manifests typical symptoms when infected. Ranchers had been advised to use anti-canine distemper serum as a preventive and large quantities were used on several ranches. On the whole the results were very disappointing, little or no benefit being derived from its use. The use of autogenous tissue vaccine gave very much better results as a preventive.

Distemper in the Mink. This disease occurred in two main forms, *e.g.*, the nervous and the systemic.

The nervous. This form was characterized by convulsions in which the animal would cry loudly for several minutes at a time. Often this was the only symptom noticed. In other cases, however, there was a slight watery discharge from the eyes, and the mink had been off feed and somewhat listless for a few days.

The systemic. In this form the first evidence of sickness is in the indifference of the mink to food. It frequently remains hidden in the nest, and shows no interest in its environment. A slight watery discharge from the eyes and nose appears. Soon the eyelids show yellow crusts along the borders, and the lids may be stuck together. There is a catarrhal conjunctivitis. At the same time a slight nasal discharge appears and the lips and cheeks are highly congested. The skin of the abdomen is frequently hyperæmic, also that of the foot pads, which seemed to be very painful. The temperature is between 104° - 106° F. The disease usually lasted from five to ten days, the animal becoming progressively weaker and emaciated. Recovery is rare, the mortality being almost 100%.

Post-Mortem. The changes were as a rule not marked. The lungs were congested, but pneumonia was rare; the spleen was usually several times the normal size, dark and friable. Congestion and enlargement of the liver is common. In some cases there was a marked gastro-enteritis. Apart from the enlarged spleen pathological changes were not marked. A very acute dermatitis of the foot pads and adjacent skin was frequent.

The disease in the ferret is almost identical with that seen in the mink. The incubation period is from five to ten days, when a rise in temperature occurs.

The Prophylactic Value of the Anti-Canine Distemper Serum. Young ferrets were used in this experiment, as mink could not be procured. As already mentioned, most ranchers had not found the serum to have any value as a preventive, although large doses were used (5 cc.) and repeated ten days later. Four ferrets were given 2.5 cc. each of the serum and later the eyes and nose were swabbed with infected exudates taken from acute cases. In ten days the serum was repeated. All of the ferrets came down with typical distemper and died within a month. This experiment was repeated, using two injections ten days apart of 5.0 cc. of anti-canine distemper serum. The results were practically the same in that all the ferrets became infected and died.

Tissue Vaccine as a Prophylactic. The vaccine was prepared by triturating the lung and spleen with sand until a very fine paste was produced. This was now diluted in saline solution, one part to ten of saline. The virus was killed by the addition of .4% of formalin. The vaccine was used in quantities of 1.0 cc., followed by a second dose of 2.0 cc. in ten days.

On one ranch eleven hundred mink were inoculated, and two hundred kept as controls. In the vaccinated group the death rate began to drop in two weeks. In four weeks the death rate was down 50%. At the end of six weeks there were no more deaths. In the control group of two hundred mink the death rate continued without any change.

The rancher had used large quantities of the serum with no success. Quoting from his report, he says: "One cannot draw definite conclusions about the effectiveness of tissue vaccine but from our experience I think it is worth while — I would certainly try it again."

CLINICAL CASE REPORTS

R. A. McINTOSH

LEUKEMIA IN A COW

Leukemia is defined as being a fatal disease in which there is a marked increase in the number of leucocytes in the blood, together with an enlargement and proliferation of the lymphoid tissue of the spleen, lymphatic glands and bone marrow. In clinical cases, every lymph node in the body is enlarged. The disease is attended with progressive anemia and increasing exhaustion.

In animals, the disease is sometimes spoken of as pseudoleukemia. Lymphoblastoma and lymphocytoma are other terms applied to it. It is a condition in which there is a definite neoplastic disturbance of the blood-forming tissues, thus the tumefaction of the lymph glands. It has been determined also that in some instances there is no increase in the number

of leucocytes and the condition is then referred to as an aleukemic lymphocytoma.

Leukemia Case—Showing the Tumified lymph glands.

The illustration included in this report pictures a case of this nature in a Holstein cow six years of age. The owner first noticed a swelling at the base of the right rear quarter of her udder and shortly afterwards in the loose fold of the skin on the right flank. Veterinary assistance was acquired and an exploratory puncture of the flank was made to determine, if possible, the character of the contents of the lesion. No exudate was found. An incision was made in the enlargement, but again without finding any pus cavity or fluid content. This healed, but the tumefaction of the gland continued. Two months later, the writer had the opportunity to examine the case and all of the superficial body lymph glands showed this tumefaction as is revealed in the picture. The animal was progressively becoming more emaciated and because of pressure in the laryngeal region, due to the enlargement of the retro-pharyngeal lymph gland, laboured breathing and coughing were quite marked. Samples of her blood were taken for a white blood cell count and found not to be above normal. The cow was disposed of as a canner and, unfortunately, the opportunity of following the case through was not accomplished.

NECROTIC STOMATITIS IN CALVES

This is a condition apparently becoming somewhat prevalent. On a number of occasions cases of this nature have been submitted to the clinic for examination and diagnosis. In some instances, the owners stated that veterinary examination and advice had been acquired without a diagnosis having been given.

The disease is caused by the *Actinomyces Necrophorus*, a soil-borne organism which finds a suitable habitat in damp, decaying vegetable matter. It also causes what is commonly spoken of as a sore mouth in young pigs, lip and leg ulceration in sheep and foul-in-the-foot of cattle. Numbers of calves kept in the same pen in which manure and filth accumulates are more often affected. When the organism becomes prevalent in the pen, the calves, undoubtedly, pick it up from the contaminated bedding and possibly from troughs, mangers, and pails from which they are fed. The eruption of teeth and abrasions they cause on the gums and the inside of the cheek provide an avenue for the infection to get into the tissues, after which characteristic lesions appear. Quite often lumps appear on the sides of the face and their presence is often the first indication the attendant observes in these cases. The circumscribed enlargement is due to the tumefaction of the facial tissues around the necrosing centre of infection. Affected calves string mucous and saliva from their mouths and often it has the highly offensive odor of decaying flesh. Such calves may drink their milk, but may refrain from eating. They become gaunt in appearance, unthrifty, and scouring is quite frequently observed. If the condition is neglected similar areas of necrosis may occur in the region of the pharynx and larynx, resulting in difficulty in swallowing and breathing and also coughing. Infected material may be swallowed, cause a degree of enteritis and in some instances passes through the wall of the intestine into the blood stream to later lodge in the liver. If such lesions develop, it invariably causes the death of the affected animal.

The following report and illustration indicate one of the more severe cases in which the liver became involved. The owner brought in the carcass of a calf which had died en route to the college. An inquiry into the history of the condition revealed that six calves had been lost which were

Cut Section of the Liver showing White Necrotic areas in the Parenchyma of the gland.

similarly affected. The calves were kept in a common pen and pail fed. Practically all of them had shown swollen faces and then gradually became worse and died. In the post-mortem examination of this one there was a necrotic lesion in both cheeks and on opening the carcass lesions were observed in both of the lungs and the liver. The liver was extensively involved as is seen in the accompanying illustration. There was also some indication of a gastroenteritis. It should be observed that once the liver becomes involved, the temperature of the affected animal becomes quite high and they become quite seriously affected. This is due in part, at least, to toxemia for there is no possibility of the toxic material being eliminated as for instance when the lesions are confined to the mouth.

To control the condition, it is advisable to isolate the affected animals, thoroughly clean out and disinfect the pen in which they were kept and not allow them to have any roughage until pretty well recovered. Whole milk, flaxseed tea and calf meal will suffice for the diet during the interim of recovery. The treatment of the diseased areas in the calves' mouths requires the curretting of the lesions and the application of Lugol's solution of iodine. In some instances, it may be necessary to make an external opening in the facial lesions in order to successfully remove the necrotic tissue and provide ample drainage.

PREGNANCY DISEASE IN A EWE

The subject of this clinic was a pure-bred Southdown ewe aged four years. She was a member of a flock of twelve. During the winter they had been fed mixed hay (clover and timothy), turnips, and towards lambing time a little oat grain. They were housed in a pen connected with a yard in which they could exercise at will.

This animal was first noticed sick four days prior to submitting her to the clinic. She was dull and stupid, shook her head and ears and ground her teeth. She drank a little, but would not eat at all. These symptoms became more pronounced and when examined she was very stupid, acted as if she were blind and would not move when approached. A sample of urine was obtained and a test applied for ketone bodies. The reaction was markedly positive.

A diagnosis of Pregnancy Disease was made and she was immediately given 300 cc. of a 40% dextrose solution intravenously. Cascara and molasses were given also by the mouth. The next day some improvement was evident, and she was given 250 cc. of the dextrose solution. On the third day, she was quite improved. She ate hay and grain, drank freely and was quite active. Her senses had returned to such an extent that she was quite timid and would try to avoid anyone on their approach. On the fourth day, she continued to be quite bright, but showed some uneasiness. A few hours later, labor pains were in evidence and two still-born feti were removed. Unfortunately, the second fetus was difficult to remove because of malpresentation. Subsequently the ewe succumbed, evidently due to a metritis.

The reason for including this case report is to reveal the cure of the acetone-mic condition by the use of the dextrose solution. Had it not been for the obstetric difficulty, it is felt that the patient would have recovered.

TO THE HONOURABLE ALBERT MATTHEWS, LL.D.,
Lieutenant-Governor of the Province of Ontario.

MAY IT PLEASE YOUR HONOUR:—

The undersigned has the honour to transmit the Annual Report of the Department of Highways, Ontario, for the fiscal year ending March 31st, 1940.

Respectfully submitted,

T. B. McQUESTEN,
Minister

Department of Highways, Ontario,
Toronto, December 31st, 1940.

TO THE HONOURABLE T. B. MCQUESTEN, K.C., B.A., LL.B.,
Minister of Highways, Ontario.

SIR:—

I have the honour to present herewith Report on the activities of the Department of Highways for the Fiscal Year ended 31st March, 1940.

The Report covers operations and functions performed by the various branches, including King's Highways, Municipal Roads, Bridge Construction, Accounting, Gasoline Tax and Motor Vehicles.

I have the honour to be, Sir,

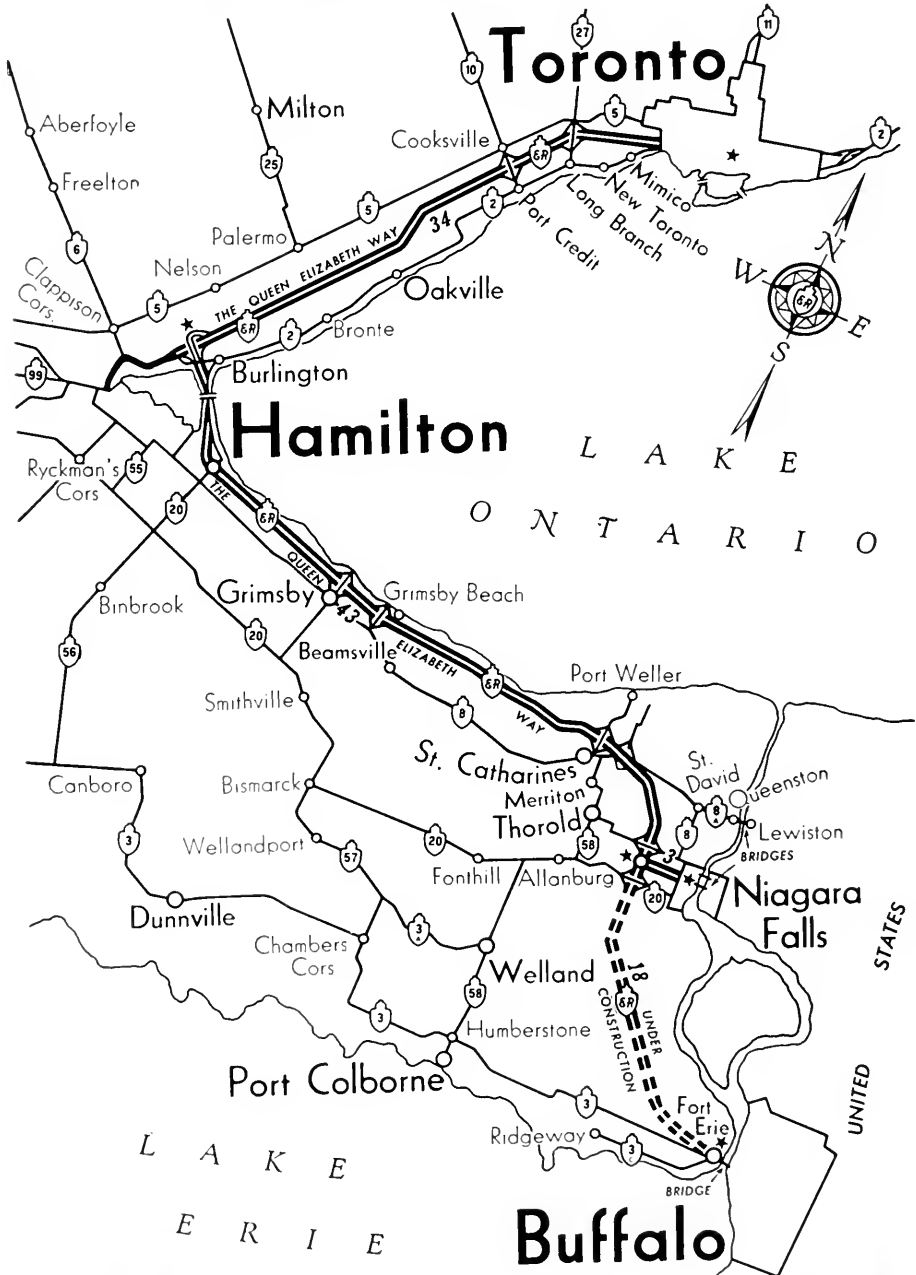

Your obedient servant,

R. M. SMITH,
Deputy Minister.

Department of Highways, Ontario,
Toronto, December 31st, 1940.

THEIR MAJESTIES AT THE DEDICATION OF THE QUEEN ELIZABETH WAY

The Queen Elizabeth Way

HIGHWAYS OF ONTARIO

By R. M. Smith, Deputy Minister

This report covers the twelve months ending March 31st, 1940.

During that period the Revenue of the Department reached a record high of approximately \$34,000,000.00, an increase of more than \$7,400,000.00 over the immediate preceding twelve months. Of this increase something over \$6,600,000.00 was from Gasoline Revenue, reflecting the first year's increase of two cents per gallon in the tax, but accounted for in part also by an increase in gallonage sold. Motor Vehicles Revenue accounted for an additional \$780,000.00 of the increase.

Expenditure of the Department for the period of this Report came much closer to the total Revenue figure than for several years.

	APPROXIMATE REVENUE	APPROXIMATE EXPENDITURE
1939-40.....	\$34,000,000.00	\$ 32,000,000.00
1938-39.....	26,500,000.00	42,000,000.00
1937-38.....	27,000,000.00	43,700,000.00
3-YEAR TOTALS.....	\$87,500,000.00	\$117,700,000.00

An examination of the following pages will show that an ever higher standard of both construction and maintenance methods is being applied to the King's Highways of Ontario, adding to their beauty and to the safety and comfort of everyone using them. Better equipment and the application of more scientific methods each year reduce the discomforts of mud and dust in summer and the hazards of ice and snow in winter.

Both Northern and Southern Ontario received attention in the Construction program of this period. The highways of the North are being quickly extended and rebuilt to Southern standards, providing improved transportation facilities for miners, farmers and lumbermen, and luring the tourist farther and farther into this Province of beauty and romance.

Progress was made on the new development between Nipigon and Geraldton and a start was made east of Geraldton on the gap between that point and Hearst, which, when completed, will provide an all-Canada route east and west across Ontario.

Subsidies of over \$5,200,000.00 were paid to counties and townships to assist in their roads programs, and in this connection an expression of appreciation is due to their engineers as well as to those of the several suburban commissions for the results obtained by their efforts. Close co-operation between municipal officials and the Department has helped in unifying methods and in obtaining a maximum of economy.

Registration of motor vehicles showed an increase over the all-time high of the previous year of 2.3% and totalled 724,477.

With a continuous increase in the volume of traffic, reflected in more registrations and more gasoline sold, a corresponding increase in highway accidents has been prevented by improvements to and a more rigid enforcement of the Highway Traffic Act.

The year 1939 will long remain a memorable one:

Their Majesties, King George VI and Queen Elizabeth, visited Ontario early in the summer, stopping at most of the larger centres as well as points in the more sparsely settled North.

Her Majesty, Queen Elizabeth, dedicated the new divided highway, which, when completed, will connect Toronto and Fort Erie. This highway proudly bears her name, "The Queen Elizabeth Way."

Late in the same summer, Canada quickly followed the Mother Country in the declaration of war against Nazi Germany, and almost immediately Ontario's men in hundreds and then in thousands joined the various branches of Canada's armed forces. The Department of Highways has shared in this, through the loss of many valuable men to the Army, the Navy and the Air Force, with every prospect of seeing still more leave safely and securely to help preserve our priceless heritage of freedom.

REPORT OF THE HIGHWAYS ACCOUNTANT

By **G. E. F. Smith, Chief Accountant**

TO MR. R. M. SMITH, Esq.,
Deputy Minister of Highways,

The following is a summary of the Net Expenditure and Revenue for the fiscal year, April 1st, 1939, to March 31st, 1940:

EXPENDITURE	
King's Highways, Connecting Links, etc.	\$ 24,708,279.56
Grants to Counties	2,387,240.73
Grants to Townships	2,875,585.42
Administration, Equipment, etc.	1,889,498.71
	<hr/>
	\$ 31,860,604.42
REVENUE	
Gasoline Tax	\$ 25,111,338.15
Motor Vehicles	8,682,104.24
Permits, Gasoline Pumps, etc.	98,200.11
Road Assessments	41,247.10
Miscellaneous and Sundries	23,601.92
	<hr/>
	\$ 33,956,491.52

As in previous years the books of each municipality accepting aid under the Highway Improvement Act were audited by the Accounting Department.

REPORT OF GASOLINE TAX REVENUE

By **S. O. Cuthbertson, Chief Inspector, Gasoline Handling Act**

To R. M. SMITH, Esq.,
Deputy Minister of Highways.

The gross gasoline tax collections for the Province during the fiscal year, April 1st, 1939, to March 31st, 1940 (both dates inclusive) amounted to \$27,428,149.51. During the same period, there was refunded to farmers, manufacturers, motor boat users, airplane users, etc., the amount of \$2,322,790.39. After having refunded the latter amount, the net gasoline tax for the period mentioned above amounted to \$25,105,359.12, being an increase in excess of \$6,500,000.00 over the same period in the previous year. The increase is accounted for, in some part, to the increased gasoline tax which became effective midnight, March 31st, 1939. The tax was increased from 6c per Imperial gallon to 8c per Imperial gallon. There was, however, an increase in the gasoline gallonage sold during the period to which this report refers.

During this same period, there was received \$5,279.03, being revenue derived from gasoline handling license fees, and \$700.00, being revenue from fines imposed for infractions of the Gasoline Handling Act.

During the period covered by this report, increased efforts have been made to eliminate fraudulent gasoline tax claims. Dealers who have not complied with the Regulations under the Gasoline Handling Act have had their gasoline handling licenses either suspended or cancelled; and, in cases where it has been definitely established that fraudulent claims have been filed with the Department in order to defraud the Government, court actions have been instituted in order to protect the revenue of the Department. Investigations are continuing which reveal, from time to time, fraudulent claims, and cases are submitted to the courts to be dealt with.

Audits of collectors' records are conducted periodically to verify the monthly gasoline tax returns.

S. O. CUTHBERTSON,
Chief Inspector Gasoline Tax.

REPORT OF MISCELLANEOUS PERMITS BRANCH

By **C. G. Fairs, Supervisor**

To R. M. SMITH, Esq.,
Deputy Minister of Highways.

I have the honour to submit the following 1939-40 Fiscal Year Report:

Building Permits

Number of Permits Issued.....	SSS
Approximate Value.....	\$1,627,149.00

Comments:

These permits are issued for all types of buildings erected within One Hundred and Fifty Feet of any King's Highway right-of-way boundary, except roads classified as "Divided Highways."

Very few of these buildings, if any, will ever have to be moved in order to widen right-of-ways, as extra precaution is taken to check into future contemplated road changes; the permit is issued accordingly.

Public Garage Licenses

These licenses are issued as of the calendar year, January 1st to December 31st, 1939.

Class "A"	3,737
Class "B"	2,186
Revenue Receipts for the Fiscal Year	\$17,891.52
Number of Inspections Made	6,000
Number of Registered New Car Dealers	1,569
Number of Registered Used Car Dealers	2,556
Number of New Cars Sold (1938)	51,710
Approximate Value of New Cars Sold (1938)	\$51,740,000.00
Number of Used Cars Sold (1938)	132,527
Approximate Value of Used Cars Sold (1938)	\$46,384,450.00

"To obtain the number of new and used cars sold in one complete year, we had no alternative but to accept the full year of 1938, the year previous to our inspection".

Number of Motor Vehicle Wreckers	600
Approximate Value, Public Garage Buildings	\$31,351,450.37
Approximate Value of Equipment	\$ 6,581,989.86
Number of Employees	19,007
Number of Mechanics	8,138

Comments

A complete survey of this business was not completed as our Inspectors could not devote all their time to it. All the above figures and estimates, I can safely say, without hesitation, would be largely increased had a complete survey been made.

Approximate value of buildings and equipment were voluntarily obtained from the license holders. Our Inspectors were instructed to, at all times, underestimate real estate and equipment value so that a more true picture of this investment could be obtained.

Gasoline Pumps — King's Highway Outlets Only

These permits are issued as of the calendar year, January 1st to December 31st, 1939.

Permits \$25.00 (Curb)	541
" \$5.00 (8' to 25' from Highway Boundary)	3,858
Revenue Receipts for the Fiscal Year — April 1st, 1939, to March 31st, 1940	\$34,156.33

Comments

During the year we have had 42 curb locations removed and placed 8' to 25' from highway boundary — all these locations were hazards and were rearranged through request of the Department.

Sixty-five new service stations placed adjacent to King's Highways or roads maintained by the Department were equipped with up-to-date washrooms, etc.

Signs

Permits issued as of the calendar year, January 1st to December 31, 1939.

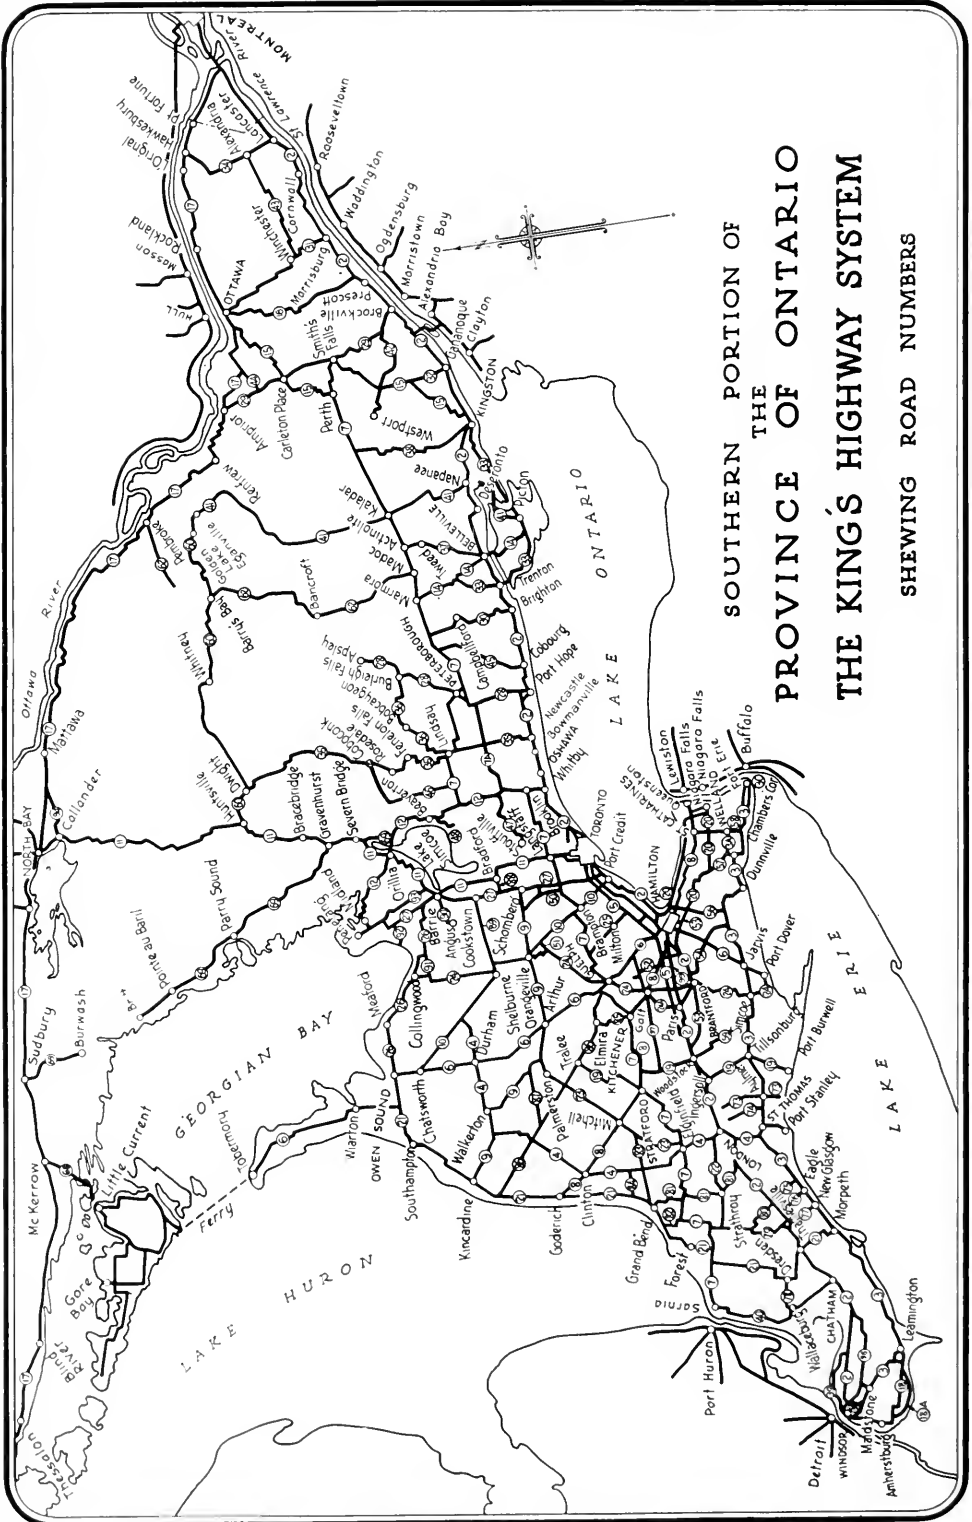

Permits \$ 1.00	902
" \$ 5.00	1,899
" \$10.00	562
Revenue Receipts for the Fiscal Year	\$16,119.26

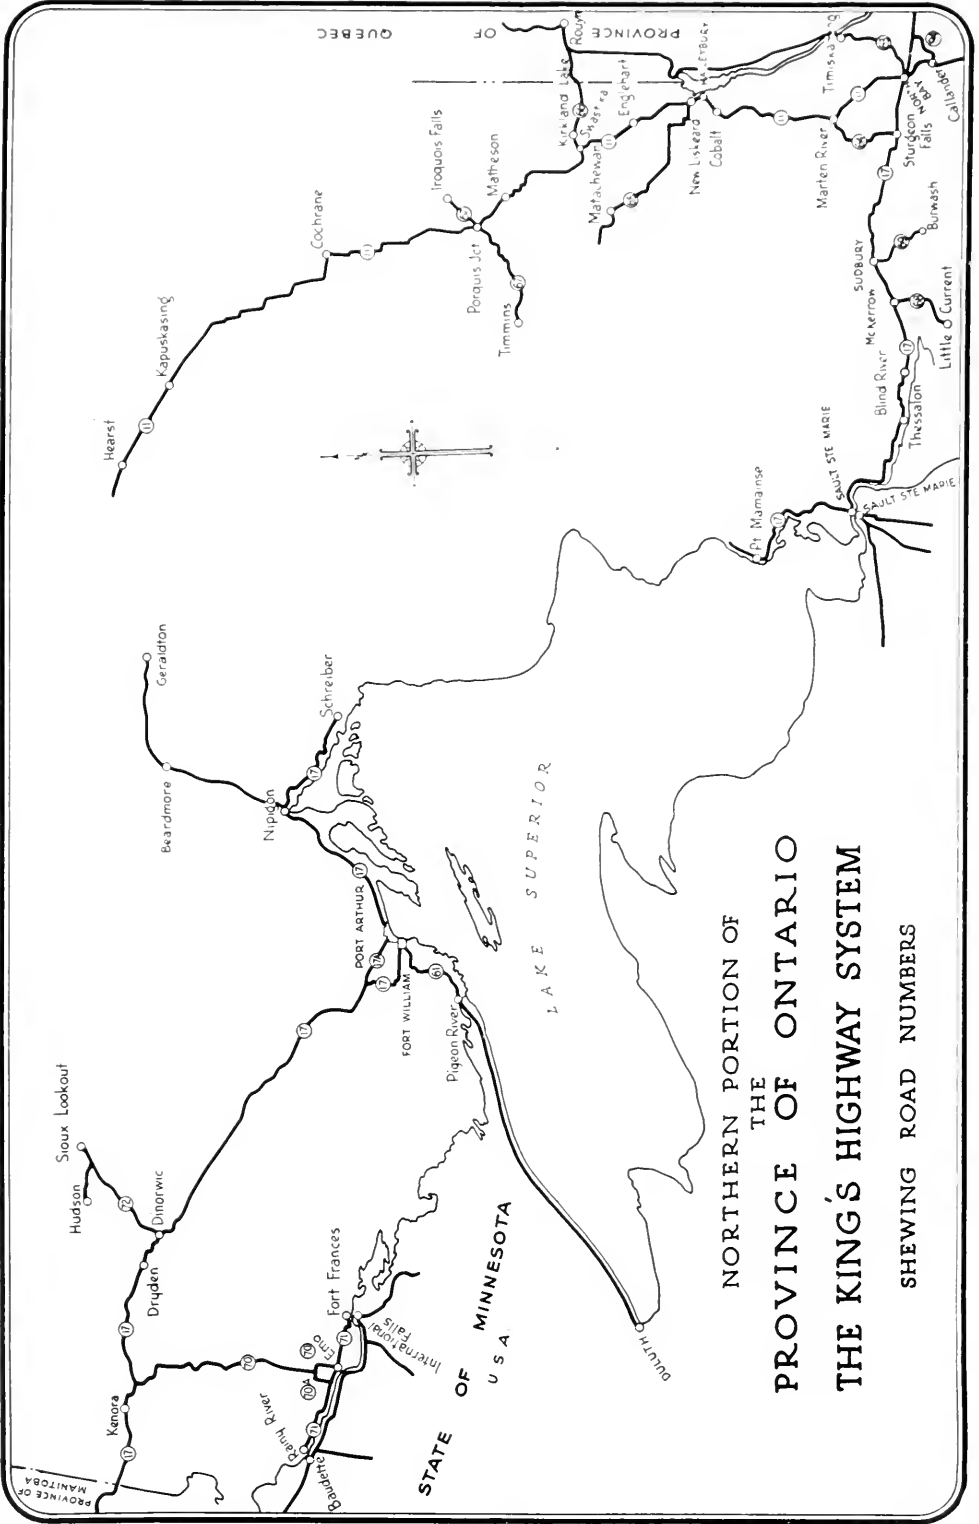

Comments

There is a slight decline in Outdoor Field Bulletins which require Department Permits. We are discouraging the erection of these bulletins as much as possible and trying to preserve the scenic beauty of the highways. Signs attached to trees, fences and unused buildings which were contrary to Department Regulations have been removed.

SOUTHERN PORTION OF
THE
PROVINCE OF ONTARIO
THE KING'S HIGHWAY SYSTEM

SHOWING ROAD NUMBERS

M-1266-9
Bulletin 1939

ANNUAL REPORT FOR 1939

KING'S HIGHWAY OPERATIONS

A. A. Smith, Chief Engineer

As in previous years the operations on the King's Highway system were carried out with the object of providing safe, all-weather roads for the motoring public. In all new construction work undertaken, safety has been the first consideration in the design and location. Two major changes were made in the Standards of the divided highways now being built on the more heavily travelled routes. The first was the adoption of a pavement width of 23 feet, composed of a driving lane of 11 feet and a passing lane of 12 feet. The second was the provision for twin structures at all bridges, giving complete separation of opposing traffic lanes.

Considerable attention was given to the erection of traffic control devices. In addition to the conventional traffic signals previously put into service, amber flashing lights were installed at several points. Resurfacing was carried out on some of the older pavements and driving conditions were improved by additional zone markings, guide rail and reflectorized signs. Summer maintenance included the application of dust layer on all main gravel roads.

Dedication Ceremonies at Queen Elizabeth Way — St. Catharines, 7th June, 1939

Dedication Ceremonies at Queen Elizabeth Way — St. Catharines, 7th June, 1939

The usual winter maintenance programme was carried on. All King's Highways in Southern Ontario and the leading highways in Northern Ontario were kept open during the winter months. For ice control on new concrete pavements, the Department undertook the use of heated sand in place of chemically treated sand. Two hot sand plants were built, one east and one west of Toronto, and satisfactory results obtained.

Following the outbreak of war in September 1939, many members of the Department staff were granted leave of absence to enlist for active service or to join the staff of the Department of National Defence. The Surveys Branch assisted in the laying out of the airports being constructed under the Empire Air Training Plan. The methods of aerial mapping used in highway location were very valuable in this work.

Summary of Construction Projects

During the visit of Their Majesties to Canada this year, the Queen graciously consented to open the Toronto to Fort Erie divided highway and granted permission to call the road The Queen Elizabeth Way. The opening ceremonies were carried out by Her Majesty the Queen on June 7th, 1939, at the junction of Niagara Street and the Queen Elizabeth Way at St. Catharines.

Work on this highway was actively continued. The Henley Bridge near St. Catharines and other bridges at Jordan, Fifteen Mile and Sixteen Mile Creeks were completed. Grade separations were built at Lake and Niagara Streets in St. Catharines, at the Martindale Road and at the Cushman Road where Highway 8 intersects the Queen Elizabeth Way. Paving was complete on the Stoney Creek Traffic Circle and approaches forming the intersection with Highway 20. Grading and structures were in the course of construction from Thorold Stone Road to Lundy's Lane and on the approach to the Rainbow Bridge at Niagara Falls.

Daylight View — Junction of Highways Nos. 2 and 5 at Scarborough

On the western entrance to Toronto on the Queen Elizabeth Way, twin bridges were under construction at the Canadian Pacific Railway, Salisbury Avenue and the Canadian National Railway. Concrete overpasses were being constructed to accommodate Grand Avenue and Kipling Avenue over the new highway. A reinforced concrete retaining wall and overpass bridge were under construction at the junction of the Queen Elizabeth Way and Highway 2.

At the eastern entrance to Toronto, pavement was completed on the divided highways from the grade separation at the Scarboro Cenotaph to Birchmount Avenue on Highway 2 and to Eastwood Avenue on Highway 5. Lighting installation was carried out in this area. A new bridge was completed over Highland Creek on the continuation of the divided highway from Toronto to Oshawa. A grade separation was completed east of the Rouge River on this same highway.

The paving of Highway 90 from Barrie to Camp Borden was started and the base course completed before winter set in.

In Northern Ontario further sections of Highways 11 and 17 were brought up to Class "A" standard. On Highway 11, considerable work of regrading was done between North Bay and Temagami and between Englehart and Kenogami Lake. The new road from Matheson to Pamour was put in condition for winter travel. Twenty-six miles of hot-mix pavement were laid during the season between North Bay and Englehart.

On Highway 17 between Chalk River and Sault Ste. Marie, several short sections were regraded to Class "A" standard. Ten miles of hot-mix pavement and twenty miles of concrete pavement were laid. Several bridges and one overhead were constructed. West of the head of Lake Superior, nine miles of mulch were laid and two bridges built.

On other northern highways a fairly extensive programme was carried out in regrading to higher standards, resurfacing and building bridges. The highway

from Nipigon to Geraldton was made passable for winter traffic with some eighty miles having been completed to date.

Work was commenced by Provincial prison labor on the stretch from Longlac towards Hearst. Two camps were erected, tote roads constructed and approximately fifteen miles of clearing completed. Under agreement with the Federal Government, thirty-eight mining road projects were carried out involving an expenditure of three hundred thousand dollars. Quite a number of roadside tourist parks and resting places were established along the main highways.

At the end of the 1939 fiscal year ending March 31, 1940, the total mileage of the different types of surfaces on roads comprising the King's Highway System was as follows:

Concrete.....	1,773.44 Miles
Asphalt.....	345.97 "
Mixed Macadam.....	677.92 "
Penetration Macadam.....	350.73 "
Retread.....	123.01 "
Macadam.....	203.12 "
Gravel.....	3,194.36 "
Total.....	7,268.55 "

Mileage constructed during fiscal year ending March 31st, 1940, was as follows:

Concrete.....	36 Miles
Mixed Macadam.....	72 "
Mixed Macadam Base.....	11 "
Penetration Macadam.....	2 "
Retread.....	6 "
Mulch.....	33 "
Grading.....	150 "
Total.....	310 "

The details of the various bridges, grading and paving work follow later in this report.

Night View — Junction of Highways Nos. 2 and 5 at Scarborough

Mixed Macadam Pavement — Highway No. 17, West of Kenora

SURVEYS' BRANCH

Land Surveys

Land Surveys were made affecting 1,762 owners. This meant the surveying and monumenting of 460 miles of widened highway, the planting of 4,550 monuments and the acquisition of 4,282 acres of land; 41 gravel pits, 11 park sites were surveyed and 96 miles of road allowance was staked.

To enforce regulations controlling development of abutting property 48 building and fence surveys were made. Three surveys were made for the Department of Public Works and one for the Department of Mines.

Location and Engineering Surveys.

The Location branch made 180 miles of road traverse and 150 miles of road diversion or new location. This included profiles, cross-sections, contours and soundings.

Airports

Between November 8th, 1939, and March 31st, 1940, the Surveys' Branch surveyed for the Department of Transport, Ottawa, 32 airport sites. This work was done in connection with the Commonwealth Air Training Plan.

The site itself was usually about 1,000 acres in extent and plans were prepared showing all buildings, structures, pole lines, etc., including all topography and contours at 2-foot intervals. The drainage was investigated and soil tests taken. These 32 ports necessitated surveying an area of 34,800 acres. In addition a zoning plan was prepared for each port. This plan covered about 9 square miles surrounding the aerodrome site. All topography was taken and 5-foot contours were shown. The height of all obstacles in this area such as trees, buildings, pole lines, etc., was obtained. The total area included by the zone plans was 437 square miles.

Increasing control over development along divided highways makes it necessary to have an up-to-date plan as constructed of those highways which have been designated as divided highways. The Location branch has been making traverses and preparing plans at a scale of 50 = 1 inch which enable application under the regulations to be dealt with, without an inspection on the ground except in special cases.

The Location Branch is making increasing use of aerial photography for preparing study plans of new locations. A machine called an Epidiascope was constructed by means of which large areas can be mapped from the photographs with very little field work. This permits of a more comprehensive study of the route and the alternatives. Aerial pictures have been used for road locations in Northern Ontario for some time now but it is only in the last year that a method was devised which enable them to be of equal value in the south.

DIVISION No. 1 — CHATHAM

Highway No. 3—No. 3B

Two miles of old concrete were resurfaced and widened in the vicinity of Windsor.

For the new entrance to the International Bridge at Sarnia, three and two-thirds miles of dual highway were graded and new structures provided.

A new culvert was installed opposite the Devonshire Race Track and another on No. 18 Highway three miles east of Kingsville.

Three miles of Highway No. 7 between Sarnia and Perch Creek were surface treated and all roads in the division were kept open for winter traffic.

Highway No. 35 at Hall's Lake, Haliburton

DIVISION No. 2 — LONDON

Highway No. 2

In the vicinity of Delaware slightly over two miles of old concrete pavement were resurfaced with 2" of bituminous plant mix.

Highways No. 3 and No. 19

The entrance from the east on Highway No. 3 and from the north on Highway No. 19 to the Town of Tillsonburg was paved with bituminous material to a width of 30 feet and a distance of one and two-tenth miles.

Highway No. 59

A large culvert was constructed at Burgessville.

Sixteen and one-half miles of highway were surface treated and all roads in the division kept open for winter traffic.

DIVISION No. 3 — STRATFORD

Highway No. 4

Crushed gravel was applied between Wingham and Highway No. 9.

Highway No. 8

In the Town of Preston the street railway tracks were removed and the connecting link was resurfaced with mixed macadam for a distance of two miles.

Highway No. 24

Concrete was laid where tracks were removed at the south entrance to the City of Guelph.

Highway No. 86

A new bridge was built and the grading completed at the east entrance to Elmira. Crushed gravel was applied from the Brussels side road to Elmira.

Crushed gravel was applied between Milverton and Tralee, Bayfield and Goderich, Elginfield and Mitchell, Russeldale and Grand Bend, Hensall and St. Joseph and between Hickson and Galt.

Twenty-five and one-half miles of highway were surface treated. All roads in the division were kept open for winter traffic.

DIVISION No. 4 — GRIMSBY

Queen Elizabeth Way

A mile of concrete pavement was laid at the Stoney Creek traffic circle, where the grading was carried out in 1938. The circle proper consists of three eleven-foot lanes of concrete, while the approaches are divided pavements twenty-three feet in width, curb, gutter and storm sewers were installed to control the drainage. All slopes were sodded to prevent erosion.

The structures at Jordan, 15-Mile and 16-Mile Creeks were completed.

Henley Course Bridge was completed in June and an asphaltic concrete surface placed on the bridge floor. After the concrete work on the bridge was completed, the appearance was greatly enhanced by the erection of ornamental stone-work and motifs to commemorate the visit of their Majesties the King and Queen.

A grade separation was carried out at Martindale Road; this is a rigid frame structure passing the Queen Elizabeth Way under Martindale Road. The bridge has a deck for motor traffic and a smaller deck on the east side to carry the N. S. & T. tracks.

Queen Elizabeth Way
Ornamental Stonework on Henley Bridge

Queen Elizabeth Way Development at Niagara Street, St. Catharines

Two twenty-three-foot lanes of concrete pavement were laid from 700 feet west of Martindale Road to Ontario Street and the legs connecting the Martindale Road were also paved.

A concrete structure was erected just east of Lake Street in St. Catharines to carry the N. S. & T. Railway over the Queen Elizabeth Way, thus a level crossing was eliminated.

Niagara Street in St. Catharines was taken over the Queen Elizabeth Way by means of a rigid frame concrete structure; this bridge has a 42-foot deck with two four-foot sidewalks and also carries the N. S. & T. over the Queen Elizabeth Way. A cloverleaf was formed by constructing legs on the northeast, northwest and southwest corners and utilizing existing streets on the southeast corner. The steep slopes were sodded and the flatter areas seeded.

The grading and culverts were completed between Ontario Street and Homer. A rigid frame structure was erected at Cushman Road and the cloverleaf graded; this layout, besides separating the Cushman Road traffic from the Queen Elizabeth Way, will serve to pass traffic travelling west on Highway No. 8 under the Queen Elizabeth Way.

On the section from Thorold Stone Road to Lundy's Lane and from the Queen Elizabeth Way to Stanley Street on the Rainbow Bridge approach, most of the culverts were built and grading operations started. Footings were poured for a concrete trestle designed to carry the Queen Elizabeth Way over the Canadian National Railway about three quarters of a mile north of Lundy's Lane.

A contract was awarded for the grading and culverts from Lundy's Lane to Fort Erie, on which no work was done.

Highway No. 6

A 2" hot mix surface was laid over the old penetration pavement between Hagersville and Caledonia.

Queen Elizabeth Way — Henley Bridge

Queen Elizabeth Way — Grade Separation near St. Catharines

Most of the gravel roads in the division were given a light coat of crushed gravel or crushed stone. Twenty-six miles of hard surfaced roads were surface treated. All roads in the division were kept open for winter traffic.

DIVISION NO. 5 — OWEN SOUND

Highway No. 21

Three miles of 1" hot top were laid, completing the mixed macadam pavement from Owen Sound West to Elsinore. Retread pavement was laid between North Bruce and Port Elgin and one and one-third miles on the Southampton cut-off.

Considerable crushed material was applied on gravel roads. Forty-three miles of highway were surface treated and 539 miles on the division kept open for winter traffic.

DIVISION NO. 6 — TORONTO

Highways No. 2 and No. 5 — East of Toronto

The grade separation between Highways No. 2 and No. 5 at the Scarborough Cenotaph was completed by the construction of divided concrete pavements (each twenty-three feet wide) from Birchmount Avenue on Highway No. 2 and from Eastwood Avenue on Highway No. 5 to the Cenotaph. The entire area was landscaped and on Highway No. 5 from Old Danforth Avenue to Eastwood Avenue the existing asphalt pavement was widened to forty feet.

Highway No. 2

The new steel and concrete high-level bridge at Highland Creek accommodating the east-bound lane of the divided highway was completed and the old

bridge carrying the west-bound traffic was refloored with reinforced concrete. About three quarters of a mile of asphalt resurfacing was done at the east approach to the Rouge River Bridge.

New Kingston Road

A reinforced concrete bridge of rigid frame design was constructed over the new divided highway at Rougemont Drive a short distance east of the Rouge River and one concrete culvert was constructed under the new highway at the east bank of the Rouge Valley.

Highway No. 7

The concrete pavement through Woodbridge (three quarters of a mile) was resurfaced with hot mix asphalt.

Highway No. 12

The old concrete abutments at the C. P. R. crossing a few miles north of Whitby were removed and the banks sloped to clear vision. Skin patching was done from Beaverton to Blackwater.

Highway No. 47

The entire twenty-two miles from Stouffville to Highway No. 12 was gravelled.

Highway No. 88

From Bondhead easterly, just under three miles were stabilized.

Highway No. 90

Mixed macadam base, 21 feet wide, was laid for a distance of eleven miles between Barrie and Camp Borden. The grading was completed on the Angus Diversion and a bridge, concrete superstructure on wooden pile trestles was erected over the Pine River. Two culverts were extended.

Queen Elizabeth Way Kipling Avenue Overpass, near Toronto

Queen Elizabeth Way — Grade Separation, C. P. R. Crossing near Kipling Avenue

Highway No. 92

The entire road from Elmvale to Wasaga Beach was gravelled and stabilized.

Highway No. 93

The entire road was regravelled.

Queen Street

From Church Street to Brown's Line the existing asphalt pavement was widened four feet.

Queen Elizabeth Way

From Highway No. 2 at the Humber River, to Brown's Line, grading for a divided highway to accommodate two thirty-three-foot roadways and a forty-eight foot centre boulevard was continued. Four new concrete culverts were built and two culverts extended.

Twin bridges of steel and concrete were under construction over the C. P. R. and at Salisbury Avenue and over-pass bridges at Grand Avenue and Kipling Avenue.

Trimming and sodding were carried out from the C. P. R. to Mimico Creek.

A reinforced concrete retaining wall and steel and concrete bridge were under construction at the junction with Highway No. 2.

Twin bridges over the C. N. R. of reinforced concrete and structural steel were also nearly completed.

Thirty-one hundred lineal feet of sewers of various sizes were installed.

Twenty-three miles of road were surface treated and all roads on the Division were kept open for winter traffic.

DIVISION No. 7 — PORT HOPE

Highway No. 2

Culvert extensions between Belleville and Shannonville were completed and mixed macadam laid on a divided road for a distance of 3.1 miles from Belleville to Point Anne Road, and single highway for 4.3 miles to Salmon River Bridge at Shannonville.

Highway No. 7

Crushed stone was placed on road and in stock pile from Madoc to Actinolite.

Highway No. 7A

A gravel mulch was laid from Port Perry easterly six miles.

Highway No. 35

Mixed macadam was laid on two line revisions north of Lindsay.

The road between Orono and Lindsay had gravel applied.

From slightly over three miles south of Lindsay, gravel mulch was laid southerly for 1.8 miles.

Highway No. 36

Grading was completed and culverts constructed for a distance of three miles on the section of road between Buckhorn and Bobcaygeon.

Highway No. 37

Crushed stone was applied from end of pavement north of Corbyville to Actinolite.

Highway No. 41

Some stabilizing was done between Picton and Cole's Ferry.

Divided Highway Construction, Highland Creek Bridge — Highway No. 2

Queen Elizabeth Way — Grade Separation, C. N. R. Crossing, West of Toronto

Highway No. 45

Crushed gravel was applied between Baltimore and Norwood.

Mining Roads

Grading operations were carried out on several mining road projects.

About 30 miles of road were surface treated. All King's Highways were kept open for winter traffic on the division and important secondary roads were ploughed when possible.

DIVISION No. 8 — KINGSTON

Highway No. 7

Filling operations were carried out at five sink holes between Mountainview and Arden, a feature of this work was the blasting of the fill material, which was sand, into place with dynamite. This method gave very satisfactory results.

Highway No. 33

A steel and concrete bridge was erected in Parrott's Bay at the site of the old Floating Bridge.

Highway No. 41

Grading south of Erinsville was completed and the surface gravelled.

St. Lawrence River Divided Highway

The grading from Crystal Beach to Mallorytown was completed and opened to traffic. At Jones Creek the substructure for a new bridge was built, ready to receive the superstructure. Work was started on a rock fill for a bridge at Landon's Bay, about three miles east of Gananoque.

A light bituminous mulch pavement was laid on the approaches to the Canadian span of the Thousand Islands Bridge and across Hill Island, also around the Customs and Immigration Buildings.

Considerable crushed material was placed on gravel roads, all of which were treated with dust layer. Forty-nine miles of hard surfaced roads were surface treated and all highways in the division, except on Wolfe Island, were kept open for winter traffic.

DIVISION No. 9 — OTTAWA

Highway No. 17

In the Town of Pembroke the widening, with reinforced concrete, of a three-arch stone masonry bridge over the Muskrat River was carried out. This eliminated a danger point.

In the vicinity of L'Original, two diversions were graded and surfaced with traffic bound macadam. These diversions were of divided lane construction with one-hundred-and-fifty-foot right-of-way.

Highway No. 31

Grading operations started in 1937 north and south from Vernon were completed and all new grading surfaced with crushed stone.

Highway No. 34

Four miles of concrete pavement were laid northerly from McCrimmon. A gravel mulch surface (road mix) was constructed over the old right-angle turn at McCrimmon by Departmental forces.

Divided Highway Construction — St. Lawrence River Road, West of Brockville

Highway No. 17, West of Nipigon

Highway No. 43

Some road mix mulch surface was laid west from Alexandria.

Slightly over thirty-eight miles of road were surface treated and all roads in the division kept open for winter traffic.

DIVISION NO. 10 — BANCROFT

Highway No. 41

A bridge was erected over Constant Creek and both approaches graded.

Highway No. 60

Crushed gravel was applied from Carson Lake to Madawaska.

Highway No. 62

Crushed gravel was applied between Madoc and Bannockburn and also west from Pembroke for fifteen miles.

Secondary Roads

Grading was carried out by Departmental forces between Killaloe and Brudenell and also east from Killaloe on the Round Lake Road.

A mulch surface was laid on the connecting links through the villages of Bancroft, Barry's Bay, Killaloe and Eganville.

Dust layer was applied on all gravel. Three hundred miles of highway were kept open for winter traffic.

Highway No. 60 at Two Rivers Lake, Algonquin Park

DIVISION No. 11 — HUNTSVILLE

Highway No. 11

One and one-half miles at north end of Beaver Creek revision was gravelled and mulched. The grade, ditches and right-of-way were trimmed on uncompleted work from six and one-half miles to nine miles south of Huntsville.

Highway No. 35

Crushed gravel was placed between Dwight and Hall's Lake, four and one-half miles of mulch surface was laid between Dorset and Miner's Bay.

Highway No. 60

Twenty-eight miles of gravelling was done from Highway No. 35 to Algonquin Park Headquarters.

Highway No. 69

Crushed gravel was placed from two miles north of Bala to the north boundary of Muskoka District.

On secondary roads some crushed gravel was applied and a mile of mulch was laid through the Village of Haliburton.

Twenty-eight miles of road were surface treated and 331 miles of highway kept open for winter traffic.

DIVISION No. 12 — PARRY SOUND

Highway No. 11

The four and one-half mile revision south of Trout Creek was completed and surfaced with crushed gravel.

Highway No. 69

The grading of the revision north from Hayes Corners was completed, gravel surfaced and opened to traffic early in the year. The grading between Naiscoot River and Britt was completed and gravel surfaced.

On secondary roads, grading operations were carried out on important realignments, two concrete beam bridges were widened and the sub-structure for a ninety-foot steel span over South River was erected.

All gravel roads were treated with a dust preventive; 130 miles of King's Highway and 220 miles of secondary roads were kept open for winter traffic.

DIVISION NO. 13 – NORTH BAY

Highway No. 11

Ten miles of hot-mix pavement was laid north from North Bay consisting of a three-inch base and one inch top course.

Crushed gravel was applied from Mile 10 to Mile 27.6 north of North Bay.

Heavy grading operations were carried out between Mile 27.6 and the north limits of Nipissing District, a distance of eleven and one-half miles. Work was started on the abutments for Marten Lake Bridge.

Highway No. 17

Ten miles of hot mix pavement was laid from Chalk River westerly consisting of a two-inch base course and one-inch top.

Grading operations were carried on between Mattawa and Bissett's. Duchesnay Creek Diversion (2 miles) west of North Bay was completed. The culverts and rock work between Sturgeon Falls and Verner were finished.

Highway No. 60 at Cache Lake, Algonquin Park

Highway No. 11 at James Lake, Timagami Park

Highway No. 63

The diversion between Feronia and Zero was completed, eliminating two railway crossings.

Highway No. 64

Crushed gravel was placed between Field and the Junction with Highway No. 11. The Sturgeon Falls-Field Diversion eliminating two railway crossings was completed except for the trimming.

Airport Road

A new road was built for a distance of three miles from No. 11 Highway to North Bay Airport.

Two railway crossings were eliminated between Field and River Valley and several grading operations were carried out on Mining Road Projects.

Slightly over fourteen miles were surface treated and 400 miles kept open for winter traffic.

DIVISION NO. 11 — NEW LISKEARD

Grading operations were carried out from south limits of Timagami District north to Timagami, a distance of 21 miles, of which 7 miles from Timagami south were opened for traffic.

North of New Liskeard considerable work was done at Calamity Gulch and 14.5 miles of mixed macadam laid between New Liskeard and Englehart. On the Diversion north of Englehart 13 $\frac{1}{2}$ miles mixed macadam base course was laid and grading operations were carried out as far as Kenogami.

TYPICAL ROADSIDE PARK HIGHWAY No. 61 AT MIDDLE FALLS, PIGEON RIVER

Grading, Highway No. 11 – Fill at Herridge Lake, Timagami Park

Grading, Highway No. 11 – Rock Cut near Herridge Lake, Timagami Park

Highway No. 65

A new bridge was erected across the Wabi River three miles west of New Liskeard.

Mining Roads

On the Elk Lake-Gowganda-Westree Road considerable realignment was done and five mining road projects had work done on them under agreement with the Federal Government.

Two hundred and ninety miles of road were kept open for winter traffic. The fall of snow was remarkably light during the year 1939 and 1940.

DIVISION No. 15 — MATHESON

New Highway — Timmins to Highway No. 11

With the completion of 5 miles of concrete pavement, except for the gap at Schumacher Overhead, the pavement is continuous from Timmins to Pamour. The overhead bridge and grading of approaches at Schumacher were also completed, eliminating a very dangerous railway crossing. Heavy grading operations between Matheson and Pamour, a distance of thirty-six miles, were carried out and while this road is not trimmed it was opened for traffic and affected a saving of ten miles between Matheson and Timmins.

The Frederickhouse River Bridge having a main span of two hundred and fifty feet was completed and a bridge was erected over the Porcupine River. A two-mile diversion was graded west of Matheson which eliminated two crossings of the T. & N. O. Railway. A Department scale was placed in operation at the outskirts of South Porcupine on Highway No. 67. On the section between Porquis Junction and Iroquois Falls some work was done on general improvement and grading. Grading was completed between the Overhead Bridge in Otto Township and the Kirkland Lake pavement, Highway No. 11. Grading was also completed from Kirkland Lake Wye to the Golf Club.

A number of roads were constructed into Mining Projects and considerable work was done in the unorganized townships.

The roads from the south were kept open for winter traffic to the towns of Iroquois Falls and Timmins, with the exception of a few weeks in the new year.

DIVISION No. 16 — COCHRANE

Highway No. 11

The floor was laid on the Ground Hog River Bridge and the approaches completed. A bridge over Lost River was also completed.

Gregoire Mills Bridge was completed with the erection of the hand rail and some grading on the approaches. A bridge and culvert were erected in Kendall Township.

Gravel mulch was laid south from Cochrane for four miles.

Considerable work was done on secondary roads.

DIVISION No. 17 — SUDBURY

Highway No. 17

A contract for concrete pavement was awarded east of Sudbury for six and one-half miles. Considerable grade revision was carried out and 2½ miles of concrete pavement completed.

Grading, Nipigon-Geraldton Highway — Rock Cut at Helen Lake

Grading, Nipigon-Geraldton Highway — Rock Cut at Helen Lake

Concrete Pavement, Highway No. 67 at Timmins

The grading between Coniston and Wanapitei River was completed, this section required the moving of a considerable quantity of material. A concrete overhead structure was erected to take the grade over the Canadian Pacific Railway tracks one mile east of Coniston.

A two-hundred-and-sixty-five-foot concrete bridge was built over the Wanapitei River.

From Wanapitei East, $3\frac{3}{4}$ miles of concrete ten feet in width was widened to twenty feet and an additional four miles of concrete pavement was laid easterly.

Grading between end of concrete and Hagar was completed as far as the C. P. R. one mile west of Markstay where an overhead reinforced concrete structure 550 feet long was partially completed.

West of Sudbury the road was surface treated to Copper Cliff, through Copper Cliff a four-inch penetration was laid in conjunction with the town, this pavement was laid on a bed of slag with very good results.

Three miles of mulch was laid between Copper Cliff and Vermillion River.

MIXED MACADAM PAVEMENT — HIGHWAY No. 11, NORTH OF NORTH BAY

Sudbury-Levack Road

From Azilda north about four and one-half miles of mulch pavement was laid and several grade revisions carried out.

Considerable crushed gravel was placed on secondary roads.

Five desirable park sites were obtained and brought under control of the Department, for the benefit of the public and the tourist traffic of the future.

Two and one-half miles of road were surface treated and two hundred and forty miles of highway kept open for winter traffic.

DIVISION NO. 18 — BLIND RIVER

Highway No. 17

Three and six-tenths miles of concrete pavement were laid north of Echo Bay and three miles north of Pine Island.

Concrete pavement was also laid for five miles east from Blind River.

Concrete Pavement, Highway No. 67 at Porcupine

Lost River Bridge, Highway No. 11, North of Kapuskasing

One mile of grading east of Walford was completed, the grading and culverts between Cutler and Serpent River were completed.

Two rock cuts west of Blind River partially excavated during the preceding winter were finished. The grading and culvert construction between Mamainse and Montreal River were completed.

A one-hundred-and-forty-foot steel bridge was erected at Root River and the Echo Bay Bridge completed.

A large quantity of crushed gravel was applied on this highway.

Some work was done on mining roads and improvements carried out on many secondary roads.

Most of the highways in this division both King's Highway and secondary roads were kept open for winter traffic.

DIVISION NO. 19 — FORT WILLIAM

Highway No. 17

Nine miles of gravel mulch were laid between Nipigon and Port Arthur. Two bridges were built over North and South Trout Creek by Departmental forces. A number of culverts were replaced.

Highway No. 61

South from Fort William a three-inch hot mix pavement was laid on the old retread for a distance of twelve miles, and south to the International Boundary about seventeen miles the road was surface treated.

Nipigon-Geraldton Highway

Heavy grading operations were carried out on this road with the result that during the past winter, it was possible to drive from Nipigon to Geraldton.

A good deal of work was done on secondary and mining roads.

A location line was run between Long Lac and Hearst.

Practically all roads in the division were kept open for winter traffic, very little snow plowing being necessary owing to the exceptionally light fall of snow.

Grading, Highway No. 70 — Rock Cut, North of Nestor Falls

GRADING, HIGHWAY No. 70 - FILL, AT LAKE OF THE WOODS, NORTH OF NESTOR FALLS

Highway No. 60 at Two Rivers Lake, Algonquin Park

DIVISION NO. 20 — KENORA

Highway No. 17

One and a half miles of new road were graded twenty miles east of Kenora. Crushed gravel was applied from Longbow Corners easterly for thirty-five miles.

Highway No. 70

Twelve miles of new grading were completed north from Nestor Falls and a fifty-foot rigid frame reinforced concrete bridge completed over Nestor Falls.

On secondary roads several operations were carried out, including the approaches to Middle Lake Bridge. Grading operations were also carried out on several mining road projects under agreement with the Federal Government.

All King's Highways with the exception of No. 17 from Vermilion Bay to Longbow Corners and English River to Ignace were kept open for winter traffic. Secondary and some important township roads were kept open when possible.

DIVISION NO. 21 — FORT FRANCES

Highway No. 70

Grading operations were completed on a twelve-mile section south from Nestor Falls and on five miles further south clearing and grading operations were started.

Highway No. 71

The shouldering and trimming along the mixed macadam pavement between Fort Frances and Devlin was completed. Gravel mulch was laid for two miles west from Sleeman.

Some work was done on Mining Road Projects and considerable work on secondary roads, made up of gravelling and the replacement of old bridges.

Three hundred and forty miles of road were kept open for winter traffic.

Grading, Nipigon-Geraldton Highway — Rock Cut at Helen Lake

Grading, Highway No. 70 — Rock Cut, North of Nestor Falls

REPORT ON BRIDGE CONSTRUCTION UNDERTAKEN BY THE HIGHWAYS DEPARTMENT AND COMPLETED DURING THE YEAR 1939

Arthur Sedgwick, Chief Bridge Engineer

During the year a total of 9,542 lineal feet of bridges was completed by the Department, among which were a number of important structures, which are briefly noted below on account of their size or advanced design.

C. P. R. Overhead on Queen Elizabeth Way

This is a grade separation project consisting of a series of reinforced concrete slab spans on concrete bents with a total length of 300 feet. The balance of the structure is made up with earth fill approaches.

Echo Bay Bridge

This is a steel beam bridge consisting of a 65-foot navigable centre span and two 43-foot side spans forming anchors and cantilevers to support a 40-foot suspended portion in the 65-foot centre span. The spans rest on creosoted timber pile piers and bents. An additional 20-foot span was placed at each end. No abutments are used. The location is on Highway No. 17, east of Sault Ste. Marie.

Chippawa Creek Bridge

This bridge is on Highway No. 17 north of Sault Ste. Marie and consists of a 100-foot span concrete arch with earth-filled spandrels.

Fifteen and Sixteen Mile Creek Bridges

These are on the Queen Elizabeth Way in Louth Township. These bridges are located in earth fills over peat-filled lagoons at the mouths of both creeks. The earth fill was dynamited to the bottom of the muck. The bridges were designed as three spanned continuous steel rigid frame girders with steel columns resting on piled foundations. Owing to the earth fill not fully replacing the muck bottom there developed a movement of the same and it became necessary to extend the bridges at each end so as to keep the earth end slopes as flat as possible. This was done by driving steel pile bents and extending the bridge with 20-foot steel girder spans.

Frederickhouse River Bridge

The controlled water level of this river widens the waterway to a width of some 900 feet. A 250-foot truss span was constructed to provide facilities for towing pulp log booms down the river. The bed of the river is clay of varying degrees of softness overlying bed rock some 60 feet below water level. The water itself was about 10 feet deep. The great expense of building the pier foundations for this long span by the usual method of cofferdamming and unwatering operations was avoided by using 12-inch steel H-columns for steel piles which were driven to bed rock and were long enough to project above the water level. The piles were then surrounded by reinforced concrete placed under water from the river bottom upwards. The reinforced concrete piers were then continued upwards and joined near the top to form a concrete bent instead of a solid concrete pier.

Highland Creek Bridge

The existing bridge on Highway No. 2 is 36 feet wide. This was not wide enough to accommodate the new four-lane dual highway now constructed to this point. Accordingly an additional structure 36 feet wide was built beside the existing structure to allow the dual highway to be continued eastward without contraction for deviation of the same. A novel feature of the construction is the principal of composite construction between the concrete floor slab and the steel top chord. The floor slab is therefore utilized to relieve the steel top chord of part of the live load stresses. The floor stringers were also made continuous over the tops of the floor beams and were spaced 10 feet apart.

Henley Course Bridge

This structure is on the Queen Elizabeth Way and spans the old Welland River near St. Catharines. It consists of a series of reinforced concrete arches up to 150 feet in length. Above the roadway the structure has been embellished with symbolic stone work at each end.

Port Stanley Bridge (King George VI)

This structure is a bascule lift span over Kettle Creek at the southern end of Highway No. 4. It consists of two 85-foot leaves which provide for a boat channel with a clear width of 150 feet. The lifting mechanism is electrically operated. There is a 30-foot roadway with two 6-foot sidewalks. A unique feature is the open grid steel floor for both roadway and sidewalks. This steel gridwork provides a strong but lighter floor and at the same time prevents snow and ice accumulation and lessens wind resistance when the bridge is being opened. This is the first installation of this type of floor in Canada.

Mimico Creek Bridge

This is a triple span rigid frame concrete girder and slab structure on Queen Elizabeth Way consisting of a central span of 80 feet with 40-foot flanking spans. The girders are supported on concrete legs which rise from solid piers reaching up to high water mark.

Muskrat River Bridge

This structure is on Highway No. 17 in the town of Pembroke. It is a reinforced concrete extension to three concrete arches which were built in the year 1887.

Wanapitei River Bridge

This structure is on Highway No. 17. It consists of a series of steel beam spans supported on steel and concrete bents. The water is controlled at this point at a level about 20 feet deep. The river bed consists of up to 60 feet of mud above bed rock. Hollow steel column piers were formed of 12 pieces of sheet piling driven to rock. The interior of the pier above the top of the mud was then filled with concrete. The steel piles thus provided the supporting power above the rock while the concrete served to stiffen the piling and to unite the 12 pieces of piling into a monolithic unit.

Several twin concrete rigid frame structures were built over Queen Elizabeth Way to provide grade separations.

Plans were prepared and work supervised for various permanent structures required by northern organized township councils, which have jurisdiction over all structures within the township but for which the Department provides the major share of the cost.

Plans were also examined and approved for all structures undertaken by counties and townships in Old Ontario.

A complete list of all structures completed by the Department during the year is shown in Appendix No. 1.

1939

REPORT UPON THE WORK OF THE MUNICIPAL BRANCH FOR THE YEAR 1939

J. A. P. Marshall, Chief Engineer of Municipal Roads

The notable feature of this season's work has been the general adoption of methods which up to the present time were more or less in the experimental stage. In many counties and townships the laying of a system of all-weather road surfaces has been started with the definite programme of placing a dustless surface on all main roads in a set period of years. Using the type of low-cost construction best adapted to local needs and materials available, the municipalities have followed the practice recommended by the Minister of Highways early in the year. More than 150 miles of this type of surfacing has been laid, notably in the counties of Kent, Norfolk, Stormont, Dundas and Glengarry, Oxford, Huron, Lambton and Leeds and Grenville.

Having a long term programme of construction has emphasized the necessity of preparing the base on which the low-cost pavements may be laid. Shaping and consolidation of the sub-grade has been more widely recognized as a vital part of the work and during the past year many miles of grade have been prepared for next season's paving.

Maintenance work during 1939 has shown a similar tendency to put experimental methods into general use. In co-operation with the Ontario Department of Agriculture, a determined effort is being made to wipe out the noxious weeds from the roads of the province. Weed control by chemical means has become an important part of the municipalities' road programme. The past year has seen a great increase in the mileage of road kept open for winter traffic. Improved snow fighting equipment and the increased use of snow fence has made this possible. It is now generally recognized that for snowplows to work efficiently, the road grade must be as wide and straight as economically possible. Thus construction methods have been adapted to a new maintenance need.

County Roads

Since the passing of The Highway Improvement Act in 1901 and to the end of 1939 a total of \$144,291,907.44 has been expended on construction and maintenance of county roads, of which the Province has contributed \$68,385,148.24. This includes the county expenditure during 1939, on which the provincial subsidy was paid in 1940.

At the end of 1939 the Province was paying subsidies to the counties on 8,325 miles of county roads — approximately 15 per cent. of the total road mileage in the area covered by the County Road System.

Expenditure on county roads in 1939 was as follows:

	Total Expenditure	Provincial Subsidy
Construction:		
County Roads.....	\$ 2,321,839.86	\$ 1,160,919.98
Maintenance:		
County Roads.....	\$ 2,453,269.15	\$ 1,226,320.85
Total Expenditure.....	\$ 4,775,109.01	\$ 2,387,240.83

Construction Work

The work on which the above expenditure for construction was made included the following:

Gravel or Stone.....	259.62 Miles
Surface-Treated Gravel or Stone.....	76.21 "
Low-Cost Bituminous Surfaces.....	160.77 "
Mixed Macadam and Asphaltic Concrete.....	3.23 "
Cement Concrete.....	2.40 "
Total	502.23 "
Bridges Over 10-Foot Span.....	42
Pipe and Tile Culverts.....	1,635
Other Culverts.....	83

A detailed list of the important work undertaken by the various counties and townships is found further in this report grouped in districts.

Maintenance Work

Bituminous Surface Treatment.....	505 Miles
Dust Prevention Treatment (oil).....	117 "
Dust Prevention Treatment (calcium).....	1,577 "
Clay-Gravel Stabilization (calcium).....	177 "
Gravel and Crushed Stone Resurfacing:—	
(a) Pitrun Gravel Applied.....	209,274 Cu. Yds.
(b) Crushed Gravel Applied.....	723,402 "
(c) Crushed Stone Applied.....	77,422 "
Snow Removal — Season 1939-1940:—	
(a) Mileage of Road Kept Open with Mechanical Equipment.....	6,628 Miles
(b) Snow Fence Erected.....	1,003 "

County Suburban Roads

The mileage of suburban roads is 757.52 miles. The expenditure at the end of 1939 amounted to \$27,497,233.35, of which the cities and separated towns have contributed \$7,224,214.26, or five per cent. of the total expenditure made on the County Road System.

In 1939 the expenditure on County Suburban Roads was \$832,788.50, of which the Province contributed \$416,394.25 and the cities \$210,728.35.

EXPENDITURES ON SUBURBAN ROADS — 1939

Name of County	Mileage	Totals	Government Grant 50%
Brant	26 40	35,122.72	17,561.36
Carleton	90 00	120,776.77	60,388.38
Elgin	18 30	13,191.23	6,595.61
Essex	37 50	18,654.15	9,327.07
Frontenac	28 50	28,087.19	14,043.60
Grey	32 50	28,185.70	14,092.85
Kent	9 50	12,321.57	6,162.28
Lambton	14 50	7,187.50	3,593.75
Leeds and Grenville:			
Smith's Falls	5 12	8,132.47	4,216.24
Brockville	6 25	7,876.13	3,938.06
Lincoln	12 30	4,754.84	2,377.42
Middlesex	40 50	18,527.53	9,263.77
Ontario	13 50	10,177.10	5,238.55
Oxford	3 95	10,336.12	5,168.06
Perth	7 50	5,906.25	2,953.13
Peterborough	58 35	38,844.66	19,422.33
Waterloo:			
Kitchener	9 25	7,566.20	3,783.10
Galt	6 00	8,611.64	4,305.82
Welland:			
Niagara Falls	9 90	2,901.49	1,452.24
Welland	7 00	26,892.45	13,446.23
Wellington	23 50	9,246.59	4,623.30
Wentworth	56 00	60,539.40	30,269.70
York	241 20	348,342.80	174,171.40
TOTALS	757 52	832,788.50	416,394.25

DISTRICT NO. 1 — *Counties of Essex, Kent and Lambton.*

Essex — Construction for the year consisted of 3 miles of 20-foot, low-cost, plant-mixed bituminous mulch pavement south of Combra on Road No. 12; 2 miles of similar type on Road No. 6 west of Stoney Point and 1 mile on Suburban Area Road No. 4 at the Dominion Golf Course. One mile of heavy grading was completed on Road No. 3, Point Pelee, and 7.50 miles graded to standard width on other roads in the system. A total of 32 corrugated iron pipe culverts were installed. One concrete bridge and 3 concrete culverts were built and 4 concrete culverts and 2 concrete bridges were extended. Five miles of new grade was resurfaced with pitrun gravel.

Maintenance provided for applying calcium chloride to 50 miles of road and oil to 9 miles for dust prevention. Fourteen thousand cubic yards pitrun gravel was used for resurfacing and the entire system of 237 miles was kept free of snow during the season by mechanical equipment.

Kent — During the year 32 miles were graded to county standard. In some places the alignment was changed and the profile improved considerably. Twenty miles of plant-mixed bituminous pavement was laid, of low cost type, using gravel on various roads as follows: No. 4, south from Tilbury to existing pavement, 5.5 miles; No. 36, south from No. 2 Provincial Highway through Fletcher, 3.0 miles; No. 16, easterly through Highgate, 7.0 miles; No. 32, near Bothwell, 1 mile, and from Mitchell's Bay south on No. 34 to the existing pavement, 3.5 miles; 1.5 miles of concrete 20 feet wide was laid on Road No. 29 north of Ennett, and 800 feet 20-foot concrete was laid on No. 1 south of Wheatley; 8.5 miles of new

grade was resurfaced with pitrun gravel and 32 corrugated pipe culverts were installed; 5.0 miles were given bituminous surface treatment and 1 mile was treated with calcium chloride for dust prevention. During the year 9,000 cubic yards of pitrun gravel and 19,000 cubic yards of crushed gravel was applied resurfacing. Two hundred and ninety-six miles was kept free of snow by mechanical equipment.

Lambton — During the year 5.44 miles road-mixed bituminous gravel mulch pavement were laid and 0.50 miles were given double surface treatment; 5.15 miles were graded to county standard and 10 corrugated iron culverts were installed; 5 concrete culverts and 3 concrete bridges were repaired and widened; 7.5 miles of new grade was surfaced with gravel.

Ten thousand five hundred cubic yards pitrun gravel, 2,400 cubic yards crushed gravel and 5,600 cubic yards crushed stone were used resurfacing; 1.35 miles were given bituminous surface treatment; 1.75 miles were treated with oil and 2.00 miles treated with calcium chloride for dust prevention; 2.25 miles were given salt stabilization and 1.50 miles were stabilized with clay and calcium chloride; 3 miles of snow fence was erected and 190 miles were kept free of snow by mechanical equipment.

DISTRICT NO. 2 — *Counties of Elgin, Middlesex, Norfolk and Oxford.*

Elgin — A retaining wall was constructed at Roloson Hill, in the Township of Bayham, Road No. 38. A cement box culvert was replaced together with the necessary grading and realignment of three quarters of a mile of roadway, using crushed stone surfacing Road No. 30 in the Township of Yarmouth.

A ribbed rigid frame bridge was constructed, also a new cement culvert at Clencolin in the Township of Malahide on Road No. 40; replaced cement culvert at Cowal Cemetery in the Township of Dunwich, Road No. 11.

One and one-quarter miles of bitumuls emulsion was laid at New Glasgow, Road No. 3, in the Township of Aldborough; 1½ miles of gravel mulch pavement at Copenhagen, Road No. 42, Township of Malahide; 1½ miles of asphalt plant-mix was laid by the Suburban Area Commission on Road No. 30, Township of Yarmouth.

Calcium chloride and oil dust layer was used on about 50 miles of gravel roads. General maintenance work was carried out throughout the county, with the purchasing of two power graders, the roads were kept in a good state of repair.

Norfolk — 5.1 miles of new construction were completed during season to modern grades and width; 65.6 miles of road were surface treated and 1.0 miles of low-cost road mix was completed. Maintenance was carried out extensively over the whole county road system.

Middlesex — 31.5 miles of new constructed road were completed during season; 1.0 miles was surface-treated, 12 bridges were widened and strengthened and 109 pipe culverts installed.

Oxford — One county boundary bridge was replaced with a new structure on a new location to improve the alignment of the road and straighten the stream course; 18.3 miles graded to 30-foot grade, necessitating heavy hill cutting X-fills, same surfaced with crushed gravel, 12.35 paved with 3-inch top 20 feet wide; 4.6 miles of bituminous road surface treated; 35.0 miles of gravel road resurfaced; 90.0 miles treated with dustlayer.

DISTRICT No. 3 — *Huron, Perth, Waterloo and Wellington.*

Huron — This county went in for extensive heavy grading and completed 23 miles, bringing hills and approaches to bridges to proper grade and cross-section. Ten miles of asphalt mulch surfaces were put on the prepared base. This work was very satisfactory and the cost was low. Thirty-two pipe culverts were installed, 4 concrete culverts built and 5 small bridges over 10-foot span. One crawler type Diesel tractor with snow plough and 1 bull grader to work with same were purchased; also 1 roller and 3 other snow ploughs for trucks. The roads were well maintained with power maintainers and trucks with blades. Sixty-five miles of road were treated with calcium chloride. Forty-one thousand cubic yards of crushed gravel were used, and 22 miles of snow fence erected.

Perth — Grading was completed on 5 $\frac{1}{4}$ miles of road, 28 pipe culverts were installed, 5 concrete culverts built and 2 bridges over 10-foot span.

Bituminous double surface treatment was put on 20 miles of road and one-half mile of tar retread built. One tandem Diesel power maintainer was purchased for use on construction and maintenance, also 1 four-wheel-driven truck.

Roads were maintained with the use of power maintainers and 142 miles of road resurfaced with gravel. One hundred and fifty-three miles of road kept clear of snow. This is the first year Perth County has undertaken snow removal. Thirty miles of snow fence were erected.

Waterloo — Grading to proper grade and cross-section was done on 9.5 miles of road; 128 pipes installed, 3 concrete culverts built, and 1 extension of a bridge; 3.25 miles of road were double surface treated, and 13.25 miles of road were stabilized with clay, gravel and calcium chloride; 8.2 miles of road were surface treated and 3 miles treated with oil. Sixty-four miles were treated with calcium chloride. The whole county road system was excellently maintained with power maintainers, and trucks with blades; 33,146 cubic yards of gravel were used.

Wellington — Grading to proper grade and cross-section. Graveling was completed on 22 miles of road and 8 miles were widened. Three hundred and sixty pipe culverts and 280 entrance culverts were installed and 1 concrete culvert was built.

Five and three-quarter miles of bituminous low-cost surface was put down on well prepared base, using asphalt and tar. One four-wheel-driven truck with snow plough and blade was purchased.

Twelve miles of road were surface treated with bituminous material and 240 miles of road treated with calcium chloride. The surfaces were excellently maintained with the use of power maintainers and truck. Two hundred miles of road were kept clear of snow, and 340 miles of road protected with snow fence where required. Fifty-eight thousand yards of gravel were used.

DISTRICT No. 4 — *Brant, Haldimand, Lincoln, Welland and Wentworth.*

Brant — The County of Brant graded and gravelled approximately 8.2 miles of road. They also placed a gravel mulch surface on approximately 9.1 miles. The county road system was maintained to a high standard and all roads were kept clear of snow for the winter months.

Haldimand — The County of Haldimand graded and gravelled approximately 2.5 miles of road, constructed 1 concrete culvert and 4 concrete bridges. The largest bridge was a three-span, 17 ft.—40 ft.—17 ft. The end spans were designed as a cantilever. Seven and three-quarter miles of stabilized road was

laid and 63 miles of black top roads were surface treated; 0.6 miles of plant mix was laid on the Indian Line and 2.9 miles of road were surface treated for the first time. The county roads were all maintained to a high standard and were kept open for the winter months.

Lincoln — The county graded approximately $9\frac{1}{2}$ miles of road and constructed $1\frac{3}{4}$ miles of waterbound macadam. Thirty-five miles of black top roads were resurface treated. A number of metal pipes were replaced with vitrified tile and they were embedded and covered in approximately 6 inches of concrete. The county roads were maintained to a high standard and all the roads were open for winter traffic.

Welland — The county graded about 4.4 miles of road and surfaced 2.5 miles with stone. They surfaced 1.8 miles of surface treated macadam with a black base top. They constructed 1 bridge and 1 culvert; $1\frac{1}{4}$ miles of surface treated roads were widened to 20 feet by adding to either edge with a penetration. The county maintained their roads to a high standard and all roads were kept open for the winter months.

Wentworth — The county constructed 1 mile of stone roads and built $\frac{1}{4}$ mile of penetration surface. They also constructed $4\frac{1}{2}$ miles of retread. Twenty miles of black top road was resurface treated. The county maintained the road system to a high standard and kept all roads open for winter traffic.

DISTRICT No. 5 — *Counties of Bruce, Dufferin and Grey.*

Bruce — Construction: The major items of construction carried out in Bruce during 1939 consisted of the building of 3 reinforced concrete bridges on the Elora road south of Burgoyne. The two larger ones were about 120 feet over all and were a combination of rigid frame and cantilever design. These two were identical. The smaller one was a 40-foot span rigid frame design. Approximately 5 miles of additional retread was put down on this road, completing this type of surface from Walkerton to Dumblane. If their average program of construction is maintained in 1940 it is quite probable that this road will be completed into Southampton.

Considerable widening and grade reduction was undertaken, notably between Hepworth and Lake Huron on Road No. 8 and east of Burgoyne on the road from Tara to Port Elgin.

Equipment: The more important items of equipment acquired during the year consisted of 1 heavy duty power maintainer equipped with snow plough, 1 Diesel type power unit for crusher operation, and 1 Diesel caterpillar tractor. A new snow plough and wing was purchased for use on their F. W. D. truck in lieu of the one previously supplied by the Department for use on King's Highways' snow removal work. Lesser items of equipment included a machine for the manufacture of snow fence, a vibrator for use on concrete work and various shop equipment and tools for use in the machine shop.

Maintenance: Three crushing plants were operated by the county during the season and a considerable quantity of crushed gravel was obtained from the township municipalities at the rate per cubic yard prevailing on their individual contracts. This practice was followed where a township had a setup convenient to where gravel was required on county roads in the vicinity.

Demands for winter snow clearing are yearly becoming more insistent, and this item is entailing an increased expenditure as time goes on.

The more heavily travelled gravel roads in the system were treated with calcium chloride as a dust layer and stabilizer, and proved very satisfactory. The demand for dust prevention on the roads is constantly becoming more pressing, and aside from the safety element, it would appear that from the standpoint of conservation of material this practice is amply justified.

Dufferin — Construction: A limited construction program was undertaken during the year. Bridge work was limited to one small boundary line bridge and the extension of 2 culverts on the road north of Grand Valley. At several points on the system, stretches of widening and grade reduction were undertaken, notably on the Hockley Road, on Road 10 in Mulmur at Lot 23, and on Road 14 near the Grey boundary. Several corrugated iron and creosoted wood culverts were installed.

Maintenance: General maintenance was carried out over the entire system with crushed gravel, which in this county is crushed to $\frac{3}{4}$ inch. An increased mileage was treated with calcium chloride this year, and very satisfactory results were obtained. During the winter of 1938-39 a snow clearing program was inaugurated and the main county highways were kept open for winter travel the greater part of the winter.

No major additions to county road building equipment during the year.

Grey — Construction: No major construction projects were undertaken on the county system during the season. However, several miles of road have been widened and graded by the power graders. Excellent results have been obtained by these machines where the roadsides are reasonably free from obstructions, and no considerable grade reduction is required. Several corrugated iron pipe culverts were installed during the year.

Maintenance: One of the major items of maintenance is occasioned by dust prevention and stabilization of the gravel roads which comprise the county system. Calcium chloride is used for this purpose in this county. The average rate of application over approximately 112 miles was 5.2 tons per mile at an average cost of \$152.89 per mile. It is the opinion of the road authorities in this county that the expenditure for this purpose is well warranted due to the fact that a much greater proportion of the gravel applied to the roads is retained rather than blown away in dust, and the amount of dragging required to keep the roads in good riding condition is very materially reduced. Many of the roads thus treated were not dragged at all during July and August.

Although the county owns and operates five power maintainers, the full time of two of these machines was taken up by the township municipalities which rent them for part of their maintenance work. In this connection increased advantage is being taken by the townships of this service, and it appears to be working out to the advantage of all concerned.

The policy in this county of not snow ploughing any of the county roads is still adhered to, although in many quarters the demand for this winter service is becoming more insistent, and it would appear that some attempt at snow clearing will have to be made before many seasons pass.

One heavy power maintainer was acquired late in the season, making a total of six of these machines now in the county.

Grey-Owen Sound Suburban Roads — The chief item of construction undertaken by the Commission during the past season was the improvement of the approach to Owen Sound from the southwest by way of what is known as the Kilsyth Road. The dangerous sharp turn at the south city limits and the gradient of the adjacent hill to the west was greatly improved.

On the road leading north from the city along the west bay shore, approximately two miles from the end of the present pavement was graded and widened, and the grades improved.

Apart from the above, the activities of the Commission were confined mainly to general maintenance of the roads under their jurisdiction.

DISTRICT No. 6 — *Counties of Halton, Ontario, Peel, Simcoe and York.*

Halton — Construction: Continuing with its annual low-cost paving program, the County of Halton constructed 4.8 miles of bituminous gravel mulch pavement on Road No. 8 extending from Milton to Hornby. Under agreement with the Town of Georgetown the county constructed three quarters of a mile of Stancol pavement on the Georgetown connecting links. Stancol shoulders 4 feet in width were constructed on each side of the 10-foot concrete pavement on Road No. 3 in Concession I, north of Dundas Street in Trafalgar Township. A total of $4\frac{1}{4}$ miles of road was graded to standard width and surfaced with crushed gravel.

Maintenance: Maintenance work consisted of the application of approximately 5,800 cubic yards of crushed gravel, $7\frac{1}{4}$ miles of dust laying with calcium chloride, 70 miles of roadside weed spraying, and routine dragging of the roads with power equipment. The county operates a very efficient gravel crushing plant which supplies the bulk of surfacing material used. All roads were kept open for traffic during the winter months by means of snow ploughs and trucks. The county purchased two small trucks during the year.

Ontario — Construction: A total of 5.1 miles of bituminous retread was constructed; one mile on Oshawa Suburban Road No. 3, extending from Brooklin easterly, 0.75 miles on County Road No. 2 from Raglan northerly, one mile on County Road No. 1 from Brougham northerly; 0.45 miles on County Road No. 5 in the Hamlet of Claremont; 0.16 miles on County Road No. 11 in the Hamlet of Sandford; 0.54 miles on County Road No. 2 in Concession IV, Reach Township south of Port Perry; 0.7 miles on County Road No. 15 opposite Lots 8 and 9, Thorah Township, and 0.5 miles on County Road No. 17 in the Hamlet of Udney. A total of 7.01 miles of road was graded to standard width and 5.56 miles surfaced with crushed gravel. This included 1.5 miles on Road No. 1, Concessions IV and V, Uxbridge Township, which involved considerable heavy work in improving the grade and alignment of this road.

Maintenance: Maintenance work consisted of the application of approximately 8,600 cubic yards of crushed stone and gravel; $4\frac{1}{2}$ miles of bituminous surface treatment; about 50 miles of dust laying with calcium chloride; 27 miles of roadside weed spraying and routine dragging of the roads with power equipment. The county operates two crushing plants which produce practically all the surfacing material used. All roads were kept open for traffic during the winter months with snow ploughs and trucks.

The county purchased an up-to-date weed-spraying machine and one truck during the year.

Peel — Construction: A total of 1.8 miles of bituminous gravel mulch pavement was constructed; 0.8 miles on Road No. 1, Lots 9 and 10, Toronto Township, north of Streetsville; 0.8 miles on Road No. 9 in Concession II west, Chinguacousy Township, and 0.2 miles on Road No. 5 in the Hamlet of Meadowvale; 1.7 miles was graded to standard width and 1.10 miles surfaced with crushed gravel. The grading included 0.8 miles of heavy cut and fill work on Road No. 11 in Concession III east, Caledon Township.

Two 20-foot span reinforced concrete slab bridges were constructed.

Maintenance: Maintenance work consisted of the application of approximately 11,900 cubic yards of crushed gravel; 20 miles of dust prevention treatment with oil; 75 miles of dust prevention treatment with calcium chloride and routine dragging of the roads with power equipment.

The roads were kept open as far as possible during the winter months with snow ploughs and trucks.

Simcoe — Construction: A total of 5.75 miles of road was graded to standard width and surfaced with crushed gravel as follows: 1 mile on Road No. 4, Lots 3 to 5, Flos Township; 2 miles on Road No. 5, Lots 21 to 24, Tossorontio Township; 0.75 miles on Road No. 11 in Concession III, Oro Township; 1 mile on Road No. 7, opposite Lot 28, Concession I, Sunnidale Township, and 1 mile on Road No. 19 in Concessions II and III, Medonte Township.

All of the grading work was done with county-owned equipment, consisting of a 60 H.P. caterpillar Diesel tractor, a leaning wheel grader and a 5-yard Continental scraper at very reasonable cost.

A 30-foot top width of roadway was provided in all cases and a high standard of grade and alignment attained.

Three concrete slab culverts and two steel arch culverts were constructed.

Maintenance: Maintenance work consisted of 0.6 miles of bituminous surface treatment; 45 miles dust-prevention treatment with calcium chloride; 14 miles of clay-gravel stabilization, the application of about 40,000 cubic yards of gravel and stone, and routine dragging of the roads with power equipment.

Two hundred and twenty miles of road were kept open for traffic during the winter months by means of snow ploughs and trucks.

The county added to its grading equipment during the year by purchasing a 5-yard Continental scraper. The county also purchased a F. W. D. truck equipped with St. Paul under-body blade. This truck was put into service for road dragging during the year and gave very satisfactory service. Towards the end of the year a snow plough and wing were purchased, mounted on the F. W. D. truck, and the unit put into service for snow clearing.

York — Construction: The main construction projects carried out during the year were as follows: 2.54 miles of bituminous penetration macadam on Road No. 8 from Victoria Square to Gormley. Completion of the 1938 grading contract on Road No. 23, Lots 11 to 26, East Gwillimbury Township, and construction of a creosoted timber bridge, 30-foot span, and 30-foot roadway on Road No. 23 opposite Lot 20, East Gwillimbury Township.

The county also contributed to the cost of paving under the new subway on Kipling Avenue.

Maintenance: Maintenance work consisted of the application of about 4,500 cubic yards of gravel and 912 tons of stone; 51.6 miles of bituminous surface treatment; 80 miles of dust-prevention treatment with calcium chloride; routine dragging of gravel roads with power equipment and bituminous crack filling and patching of concrete and bituminous pavements.

The county purchased a new line marker for zone-painting purposes and two trucks in addition to small items of equipment.

Considerable attention was given to zone painting and the erection and maintenance of symbol signs and guard rails. The county is to be commended for the very fine appearance of the roads generally and the efforts made to provide for the safety of the travelling public.

DISTRICT No. 7 — *Counties Northumberland and Durham, Peterborough, Prince Edward and Victoria.*

Northumberland and Durham — The purchase of a 60 H.P. Diesel tractor with power controlled grader, and LaTourneau scraper, marked a new period of road construction in the counties. Ten and one-half miles of road were completely rebuilt. Very steep grades were reduced, new culverts installed and the roads widened and all surfaced; also the fences were set back to provide a 66-foot right-of-way. Operating costs on the grading were as low as .06c per cubic yard. The crushing equipment was improved by the installation of a vibrating screen and in consequence the crushed gravel delivered on the road was far superior to that of previous years. The application was also greatly reduced.

The stabilization of gravel roads with calcium chloride, which commenced in 1938, was continued last year, with the addition of 30 miles, making now a total of 70 miles of road in this category. A building for the housing of the counties' equipment was erected at Cobourg at a cost in the neighbourhood of \$2,800.00. A G & C truck was added to the fleet to be used for gravelling and slowploughing operations.

Peterborough — Perhaps the most important individual job in the county was the construction on the road leading from Westwood to Highway No. 7 of a twin span rigid frame, reinforced concrete bridge, each span 37 feet 11 inches. The bridge was designed by Mr. A. E. Chalmers, County Engineer, at a cost of \$5,800.00.

Seven and three-quarter miles of road were brought up to standard cross-section and $2\frac{3}{4}$ miles of asphaltic mulch were laid.

The dust-prevention program was continued, 63 miles being treated with calcium chloride and 6 miles treated with sodium chloride.

One Frink V-type snow plough with 11-foot wing was purchased.

Prince Edward — New construction consisted of 4 separate jobs totalling 3 miles. Heavy hill cutting was encountered and in some cases the cuts were sloped out to the full width of the right-of-way to avoid bad snow condition. The surfacing program was continued, $2\frac{1}{2}$ miles of tar retread, and $1\frac{1}{2}$ mile of tar mulch being laid.

Three and one-half miles of bituminous roads received surface treatments.

Dust-prevention treatment was carried out as formerly, 13 miles treated with oil and 15 miles with calcium chloride.

The following machinery was purchased: One Adams No. 50 power grader with snow-plough wing; 1 used White steam engine; 1 Adams snow plough; 1 Frink snow plough.

Victoria — In Victoria County $10\frac{1}{2}$ miles of road were constructed, the most important section being a relocation of Road No. 5 on the west side of Pigeon Lake. One and one-half miles of tar retread were constructed, one section extending work north of Oakwood and the other east of Fenelon Falls on the Bobcaygeon Road.

Nine miles were added to the system of calcium chloride stabilized roads, making a total of 78 miles. The standard of this type of road ranks among the highest in the province.

Two V-type snowploughs with levelling wings were purchased, which greatly improved the control of snow.

DISTRICT No. 8 *Counties of Frontenac, Hastings, Leeds and Grenville, and Lennox and Addington.*

Frontenac — Kingston suburban construction consisted of 2 miles of asphalt plant-mix top, built with the suburban-owned plant on the Glenburnie Road. A narrow concrete culvert was widened on Road No. 1A by having ten feet added to each side. On the county roads, it was realized that the old macadam roads were wearing out. To overcome this, the County Road Committee raised the road rate one mill and borrowed the suburban paving plant. Five and one-half miles, 16 feet wide, was paved with this help and an excellent start made to put the roads back in shape. The fill was widened at Buck Lake Bridge, and the rock drilled for widening along Wolfe Lake on Road No. 3.

Machinery: A new Walters truck was purchased to replace the one destroyed by fire, also 1 new Yeager pump for dewatering work where coffer dams are used.

Maintenance: All roads were kept open for winter motor traffic with the two ploughs, and trucks owned by the suburban roads, and county roads. Bush was kept down with chemical weed killer. Calcium chloride was used extensively and all roads maintained properly.

Hastings — The two gaps totalling $1\frac{1}{3}$ miles in length (on the Madoc Road) left in 1932 were paved with an 18-foot wide mulch type commercial plant-mix asphalt material known under the trade name "Stanco." The material was mixed at the contractor's plant at the Fuller Pit, and hauled, laid and rolled early in September. The grading, ditching, shouldering, culvert installation, guard rail erection, and all other work was done by county forces, and gave a great deal of employment. One large cut, involving roughly 4,000 cubic yards, was made to secure better vision and grades south of the C. N. R. crossing.

A short gap on the county pavement in Marlbank Village, comprising some 60 feet between two railway tracks, was paved with material from the same source.

The low sections of the approaches to Black Creek Bridge on the Sulphide Road were raised with rock fill taken from rock cuts at high points. This fill was to prevent flooding as the road was impassable to traffic every spring owing to the rise of Stocco Lake.

A new motor grader was purchased.

Maintenance: Three steel bridges were scraped and repainted. New timber flooring was placed on county bridges at Cannifton, Milltown.

The field tile on Road No. 5A, Sidney Township, which had been down for 40 years, was taken up, cleaned, the broken tile replaced and again installed to improve drainage.

Twenty miles of county roads were treated with calcium chloride at an average cost of \$132.00 per mile, and 32 miles were treated with oil or asphalt at an average cost of \$259.00 per mile.

Extra material was placed on the roads from two county crushers operating at Coe Hill, Moira Lake, Tyendinaga Township, Stirling, Springbrook, Tweed and Marlbank.

One new carload of snow fence was purchased and the roads were kept open in winter by contract.

Leeds and Grenville — The united counties of Leeds and Grenville have a definite program for low cost pavement and this year paved $13\frac{1}{4}$ miles, bringing the total mileage of pavement to date up to $81\frac{3}{4}$ miles.

Two bridges were built; the Garretton Bridge on County Road No. 20 is a steel bridge, 54-foot span on concrete abutments and the Otter Creek Bridge in the Smith's Falls Suburban Area is a steel bridge 30-foot in span built on the old abutments.

Extensive grading for alignment grade or daylighting was done on County Roads Nos. 1, 3, 5, 16 and 20.

A new Adams motor grader was purchased, making one for each of the united counties, and a machine shed built near Brockville to house the machinery.

Maintenance: Gravel roads were thoroughly maintained with the two motor graders. Brush was cut, the ditches cleaned, and all roads were kept smooth. Two extra carloads of snow fence were purchased and erected to help with snow removal. Winter roads were kept open as usual by the bonusing of Snow Clubs at a price per mile.

Lennox and Addington — Owing to the attempt at debt reduction and the diverting of some road funds to the general account to help cover the cost of Equalized Assessment, there was very little construction work in 1939.

The construction consisted of 8 miles of right-of-way widened with new fence, a few hills graded to improve the drainage and 22 corrugated iron pipe culverts installed.

Maintenance: All gravel roads were maintained by power grader and kept in good condition during the year. The more important gravel roads were treated with calcium chloride and patched with gravel and loose stone as required. Approximately 26 miles of hard-surfaced roads were surface treated and patched. Screened gravel and limestone chips were used for cover material. The work of surface treatment and crushing was done by day labour with county equipment.

Weeds and brush were cut over the entire system and weed killer was used.

DISTRICT No. 9 — *Counties of Prescott and Russell, and Stormont, Dundas and Glengarry.*

Prescott and Russell — After paying a large sum for back debts, these counties, under the guidance of their new engineer, Mr. R. Boismenu, found it impossible to carry on an extensive program. However, their progress was favourable.

County Road No. 9 in Plantagenet North Township was widened to 66 feet and 2 miles were graded to standard dimensions. Twenty-eight pipe culverts were installed.

The Dawson Bridge was rebuilt. It is of timber construction, 40-foot span and has a centre pier. The Bearbrook Bridge, 80-foot span, steel superstructure with concrete abutments, was practically rebuilt.

All the county road system was well maintained, and considerable attention was given to the patching of bituminous surfaces. Sixty miles of snow roads were kept open.

Stormont, Dundas and Glengarry — In these three united counties a total of 19 miles of bituminous retread were laid over a two-foot gravel base, and a surface treatment was applied to 23 miles of bituminous roads. Twenty-two thousand cubic yards of gravel were used in resurfacing. Two and a half miles of road were widened (two different stretches) to 66 feet, and graded. This was the initial step in a widening program outlined for all roads where new construction is necessary. Two hundred tons of calcium chloride were used as a dust layer on the more heavily travelled gravel roads.

Six new 3½-ton trucks equipped with new ploughs and wings were purchased and used in maintaining snow roads throughout the entire system of 464 miles.

DISTRICT NO. 10 — *Counties of Carleton, Lanark and Renfrew.*

Carleton — A good deal of work was done in the county this year and a total of 21 miles of road was surfaced with either surface treatment or low-cost bituminous surface.

The Ottawa Suburban Commission completed the widening of the Richmond Road through the Village of Westboro, thus finally removing all traces of the bottle-neck in the Village of Westboro and Ottawa West.

The Commission also did some widening farther out on the Richmond Road and started to widen the River Road between the airport and the city in order to relieve congestion.

The low cost surfacing in the county system was added to during the year. Considerable attention is also being paid to maintenance.

Lanark — Two more old timber bridges were replaced this year, one being 45-foot span and the other 20, and a bad swamp area was got rid of by detouring the road around the swamp on solid ground.

The Rideau Ferry Road had another mile widened on the surface, while low-cost surfaces were put on two other roads for a distance of approximately one mile each.

A light power maintainer for use in the narrower county roads and in the townships was purchased and also a snow plough for their F. W. D. truck, and the latter was able to keep open a considerable mileage of roads this winter.

The Smith's Falls-Lanark County Suburban Roads Commission was revived during the winter and has assumed charge of about six miles of Smith's Falls-Merrickville Road.

Renfrew — The construction programme in this county was continued during the year and about eight miles of road were built this year in three townships.

A considerable addition was made to the mileage of stabilized road and also in the way of dust layer, in both cases calcium chloride being the stabilizing medium.

A three-ton truck, concrete mixer and a leaning wheel grader were purchased during the year.

Township Roads

For the year 1939, six townships and one Provincial Park, which took no aid in 1938, came in under The Highway Improvement Act. These were:

Monaghan South
 Rawdon
 Radcliffe
 Westmeath
 Cardiff
 Whitney
 Long Point Provincial Park

Of the 571 organized townships in the Province only six were without road subsidies during this year. That is, the government subsidized road expenditures in 565 townships and two provincial parks.

Expenditure on township roads in 1939 was as follows:

	Total Expenditure	Provincial Subsidy
Construction:—		
Township Roads.....	\$ 1,814,131.40	\$ 971,530.84
Maintenance:—		
Township Roads.....	\$ 3,529,375.15	\$ 1,867,855.99
Total Expenditure.....	\$ 5,343,506.55	\$ 2,839,386.83

Construction Work

The work on which the above expenditure for construction was made included the following:

Gravel or Stone.....	391.94 Miles
Surface-Treated Gravel or Stone.....	8.80 "
Low-Cost Bituminous Surfaces.....	23.95 "
Mixed Macadam and Asphaltic Concrete.....	5.60 "
Cement Concrete.....	.14 "
Total.....	430.43 "

Maintenance Work

Bituminous Surface Treatment.....	102 Miles
Dust Prevention Treatment (oil).....	256 "
Dust Prevention Treatment (calcium).....	463 "
Clay-Gravel Stabilization (calcium).....	43 "
Gravel and Crushed Stone Resurfacing:—	
(a) Pitrun Gravel Applied.....	901,408 Cu. Yds.
(b) Crushed Gravel Applied.....	877,989 "
(c) Crushed Stone Applied.....	304,336 "
Snow Removal — Season 1939-40:—	
(a) Mileage of Road Kept Open with Mechanical Equipment.....	7,293 Miles
(b) Snow Fence Erected.....	356 "

A detailed list of the important work undertaken by the townships follows:

DISTRICT NO. 1 — *Townships in the Counties of Essex, Kent and Lambton.*

Essex — The work for 1939 consisted of laying 4½ miles of tile for road drainage purposes. Twenty-five miles of existing road were regraded to standard width, 7 metal and 4 concrete culverts and 3 bridges were built, one mile was stabilized with calcium chloride and 20 miles were treated with chloride for dust prevention. Thirty-five thousand, six hundred and twenty-seven cubic yards pitrun gravel, 2,411 cubic yards crushed gravel and 7,158 cubic yards crushed stone was applied to the township roads.

Kent — During 1939, the work consisted of laying 4 miles of tile for road drainage, 25 miles were graded to standard width, 130 metal and 3 concrete culverts were installed. Three concrete bridges were constructed. One-quarter mile was treated with oil and 7.0 miles were treated with calcium chloride for dust prevention. Five hundred and sixty-two miles were kept free of snow by mechanical equipment. Forty-five thousand and two cubic yards pitrun gravel, 7,960 cubic yards crushed gravel and 21,949 cubic yards crushed stone was applied to the roads.

Lambton — The work consisted of laying 3 miles of drainage tile along the roads, grading 53 miles to standard, installing 85 metal and 4 concrete culverts. Six concrete bridges were built. Four miles were treated with oil and 8 miles with calcium chloride for dust prevention. Four hundred and forty-two miles

were kept free of snow by mechanical equipment and 1.6 miles of snow fence erected. Twenty-eight thousand, seven hundred and twenty-one cubic yards pitrun gravel, 13,473 cubic yards crushed gravel and 16,859 cubic yards crushed stone was applied to the roads.

DISTRICT NO. 2 — *Townships in the Counties of Elgin, Middlesex, Norfolk and Oxford.*

A total of 113,704 cubic yards pitrun gravel, 78,74 cubic yards crushed gravel and 17,897 cubic yards commercial crushed stone were applied to the township road systems. Four new power maintainers were purchased, which showed a distinct improvement in road surfaces. Nine new snow ploughs purchased show the increased desire of municipalities to keep roads open in winter. Forty-three miles were treated with dustlayer for the prevention of dust, as well as conservation of metal. A marked improvement was shown on all township roads, showing an increasing desire of the municipalities to modernize the standard of their roads. Six concrete box culverts, 4 concrete bridges and some 135 corrugated iron pipes were used. Approximately 28 miles of existing road were graded to modern highway standards.

DISTRICT NO. 3 — *Townships in the Counties of Huron, Perth, Waterloo and Wellington.*

Huron — Construction consisted mainly of ditching and installing pipes and the building of culverts. Maintenance consisted of dragging and resurfacing, using approximately 84,862 cubic yards of gravel. Weeds were cut and several townships undertook spraying.

Perth — Construction consisted of 4 bridges over 10 feet and installation of pipe culverts with approximately two miles of new grade. Roads were maintained and resurfaced, using approximately 77,600 cubic yards of gravel. Five power maintainers are owned by townships.

Waterloo — Construction consisted of ditching approximately two miles of road and grading 4 miles, and the installation of pipes. Roads were well maintained with power equipment, and the use of 40,500 cubic yards of gravel. Every township in Waterloo County has its own power maintainer.

Wellington — Construction consisted of ditching approximately three miles of road and grading 6 miles, and installation of pipe culverts. One bridge over 10 feet and 3 concrete culverts were built. Roads were maintained with power maintainers and small graders. County equipment was used in several townships. Seventy-seven thousand, nine hundred and ninety-seven cubic yards of gravel were used.

DISTRICT NO. 4 — *Townships in the Counties of Brant, Haldimand, Lincoln, Welland and Wentworth.*

The townships in this district constructed two bridges and seven culverts of concrete. They graded 85 miles of road and gravelled 63 miles. Sixty-eight and one-half miles of black top road were resurfaced and 6 miles of road were surface treated for the first time. The townships maintained their roads to a fair standard for the past year and kept open by mechanical equipment for winter traffic over 1,100 miles of road.

DISTRICT No. 5 — *Townships in the Counties of Bruce, Dufferin and Grey.*

The township activities for the year in this district will be slightly below the average for the past few years. There was, however, an increase in the number of bridge replacements in the district. This was due, I consider, to the fact that many townships have been postponing the renewal of bridges during the years of depression, and many of these have arrived at the stage where it was imperative that they be replaced. This situation will probably hold for the next few years. Fourteen such bridges, ranging from 12 feet to 80 feet in span, were replaced by townships in this area during 1939, several of them being used bridges which had become obsolete for service in the county systems and King's Highways.

Seventeen concrete slab and steel arch culverts were installed, and approximately 80 pipe and tile culverts placed.

Approximately 50 miles of new grade was put up, and one township purchased a power maintainer. This makes a total of 6 power maintainers owned and operated by the townships. In addition, they are making increasing use of county-owned equipment on a rental basis.

Owing to the favourable prices obtained in recent years for crushing and hauling gravel, several townships which operated their own crushing plants have laid them up or scrapped them.

DISTRICT No. 6 — *Townships in the Counties of Halton, Ontario, Peel, Simcoe and York.*

A total of about sixty-eight miles of construction grading was done, of which about 58 miles were surfaced with gravel.

Ten bridges and 51 concrete and steel arch culverts were constructed and numerous pipe culverts installed.

In the Townships of York and North York, a total of 21 $\frac{1}{4}$ miles of black base pavement were constructed as a local improvement. In the Township of East York, 2.2 miles of surface-treated stone pavement were constructed.

A total of approximately 285 miles were treated with dust preventive, both oil and calcium chloride being used.

Five additional townships in District No. 6 purchased power graders during the year.

Five townships purchased snow ploughs and towards the close of the year a number of other townships were planning to make arrangements for snow ploughing during the winter.

There is a growing demand throughout the rural districts for snow-clearing services during the winter months and it seems as if the majority of townships will have to make some provision for dealing with this problem.

DISTRICT No. 7 — *Townships in the Counties of Northumberland and Durham, Peterborough, Prince Edward and Victoria.*

Northumberland and Durham — Generally speaking, the construction activities of the townships were curtailed, or, at least, confined to bridges. In Manvers Township a 75 foot steel span was built across the East River. Brighton Township constructed a 12 by 5 reinforced concrete bridge, and continuing its policy of building a bridge a year, Percy Township constructed a 24 foot steel and concrete job over the Burnely Creek. A special note was the decision by South

Monaghan Township to discard statute labour and to operate under The Highway Improvement Act (the last of the Mohicans). Four townships in the county made use of calcium chloride as a stabilizer.

Peterborough — Main construction activity was as follows: In Anstruther and Chandos Townships, the road leading from Apsley to the west bay of Loon Lake received special attention. One hill was cut down and straightened and the rest of the road made passable to the summer traffic. Special attention was paid to drainage, numerous cedar culverts being built. In North Monaghan, three-quarter miles of asphalt-gravel mulch were laid. Douro Township built three-quarter miles of new road to develop the south shore of Clear Lake as a tourist resort.

Several townships kept their main road open during the winter by snow ploughing.

Prince Edward — Work in the townships was of a general maintenance nature. Approximately four miles in Ameliasburg Township were stabilized with calcium chloride.

Victoria — The work was principally of a routine maintenance nature. Verulam Township purchased a crushing plant, which received considerable use, and Ops Township rebuilt and put in service a crusher that had been idle for several years.

DISTRICT NO. 8 — *Townships in the Counties of Frontenac, Hastings, Leeds and Grenville and Lennox and Addington.*

Frontenac — Thirteen and three-quarter miles of gravel or crushed stone was placed on new grades. Of this mileage, one-half mile was new road, and the remainder was existing road improvement. Sixty-seven metal and concrete pipe culverts were installed, twenty-eight wood and three concrete culverts built.

Machinery Purchased: Horse-drawn snow ploughs, 1; truck snow ploughs, 1; pull graders, 1; trucks, medium, 1.

Maintenance: Brush was removed from the sides of roads, the total clearing amounting to 14 acres. Nine hundred and forty-three miles were kept smooth with pull graders and 1 mile treated with calcium chloride. For winter traffic, 324 miles were kept open for motor traffic. All roads were kept in excellent travel condition during the summer.

Hastings — One-half mile of asphalt penetration pavement was built on MacDonald Avenue, a boundary line road of the City of Belleville. One and one-half miles of new road, also thirteen and one-quarter miles of existing road were ditched, graded and covered with crushed stone or gravel. Seventeen hundred and fifty feet of guide rail was erected, 62 metal culverts, 147 wooden culverts and 1 concrete culvert were built. Three wood bridges over 10-foot span were constructed.

One horse-drawn snow plough, 2 truck ploughs, 2 medium-pull graders, 1 light motor grader, and 2 light crushers were purchased.

Maintenance: Two hundred and forty-three miles of township roads were kept open for winter motor traffic. Eight hundred and seventy-seven miles were kept smooth with pull graders and 200 miles with motor graders. Fourteen miles were treated with calcium chloride.

Leeds and Grenville — One mile of tar penetration and 2.85 miles of plant-mix asphalt were built; 4.65 miles of gravel or crushed stone was laid on new grade. One new steel bridge, 32-foot span, was built on concrete abutments.

One truck snow plough, 1 light motor grader, 1 medium motor grader were purchased.

Maintenance: Five hundred and twenty miles were kept smooth with pull graders, and 446 miles with motor graders. Two and one-quarter miles were treated with calcium chloride. Very few roads were kept open for motor traffic during the winter and only 149 miles were ploughed.

Lennox and Addington — Three miles of gravel or crushed stone was placed on new grades. Eight metal, and concrete pipe culverts, 19 wood and 2 concrete culverts were built. Five wooden bridges over 10-foot span were constructed in the northern townships.

Machinery Purchased: Horse-drawn snow ploughs, 13; pull graders, medium, 1.

Maintenance: Five hundred and sixty-five miles were kept smooth with pull graders and 75 miles with motor graders. Three hundred and thirty-two miles of winter road were kept open for motor traffic with horse-drawn and mechanical ploughs. All roads were kept passable for traffic during the summer. Five miles were treated with calcium chloride.

DISTRICT NO. 9 — *Townships in the Counties of Prescott and Russell, Stormont, Dundas and Glengarry.*

Prescott and Russell — These townships are steadily increasing their mileage of gravel-surfaced roads, and are using a better grade of gravel each year. Four and one-half miles were graded and gravelled. Longueuil Township built a reinforced concrete culvert 40 feet wide and 5 high. A concrete culvert was built in Clarence Township; 32 pipe culverts were installed. The usual maintenance work was well done.

Stormont, Dundas and Glengarry — A concrete bridge was built in Roxborough Township. Seventy-three pipe culverts were installed and 2 metal arch culverts were constructed. Two and one-half miles of new grades were gravelled. A bituminous surface treatment was given 3 miles and 53 miles were treated with calcium chloride for dust prevention. A total of 68,000 cubic yards of gravel were used in resurfacing the township roads.

DISTRICT NO. 10 — *Townships in the Counties of Carleton, Lanark and Renfrew.*

Carleton — Maintenance was the chief feature in the townships in this county this year. The Township of Nepean purchased a power grader and have used it to considerable advantage. The Gloucester Township machine has also been in full use all year and successful use of these machines has created an awakening interest in the remainder of the townships as to the advantages of machinery for maintenance and construction of township roads.

Lanark — As in the last few years, the work in this county has been almost entirely maintenance, although a small amount of work has been done in improving visibility in narrow rock cuts.

Renfrew — There is now only one township in this county not working under the Highway Improvement Act, and the work undertaken in the townships are principally of a maintenance nature and the work done reflects the willingness of the authorities to co-operate with the Department in road improvement. The townships are endeavouring to build up gradually the requisite machinery for the maintenance of roads.

DISTRICT No. 11 *Townships in the District of Muskoka and the Provisional County of Haliburton.*

Haliburton — All townships in this district are now operating under the Highway Improvement Act. Maintenance work was efficiently carried out over the entire county. All bridges and culverts were kept in good repair. Many bad hills and sharp curves were eliminated. Roads were improved to open up Lake Shore property to tourists and summer cottagers. Considerable road widening was done in various townships.

Muskoka — One and one-half miles of gravel mulch surface was laid on the Port Sandfield Road, Medora Township. Considerable widening of present narrow roads was carried out. General maintenance work was efficiently done. Bridges and culverts were kept in good repair and ditches cleaned out. Many of the main roads in the townships are now being snow ploughed. Improvement of road surface during tourist season was very noticeable in all townships. Many bad curves were eliminated.

DISTRICT No. 12 *Townships in the District of Parry Sound.*

With an increase in by-laws in 1939, favourable progress was made in the improvement of roads in townships operating under The Highway Improvement Act. Improvement in alignment and widening of narrow grades and drainage work was carried out extensively in all townships, and new roads, opening up summer resort properties, were established and, in most cases, constructed.

Maintenance work was efficiently carried out over the entire district. All bridges and culverts were kept in good repair.

Shawanaga and Parry Island Indian Reserves took aid under The Highway Improvement Act for the first time, and the appreciation of aid given was shown by the excellent work.

DISTRICT No. 13 — *Townships in Nipissing and Most of Sudbury.*

There has been little work of an outstanding nature in this district but the principal features are as follows:

The Township of West Ferris constructed 1.2 miles of light gravel mulch with an 18-foot roadway. This was the only hard-surfacing undertaken. Sixteen bridges were extensively repaired or entirely reconstructed. Department of Highways day labour gangs performed the work on nine of the larger ones. In McKim Township a 30-foot creosoted timber bridge on piles was built, providing an 18-foot roadway. All others were of untreated native timber — the largest being in Calvin Township over the Amable du Fond River, with an approximate length of 100 feet and a 14-foot roadway.

Approximately 500 culverts were built or repaired and of these only 32 were of other than untreated timber.

There were no large road construction undertakings. Of the 7.60 miles of new road shown as constructed, very little has yet been completed to the extent of being gravelled.

The construction expenditure returns are considerably higher than last year. Much of this is due to extensive reshaping and gravelling of existing roads and might be more properly classified as extraordinary maintenance.

The only power equipment purchased was a two-ton truck by McKim Township. Two garages were built and six medium-sized horse-drawn graders purchased.

Dust layer has been used in Chapleau and West Ferris Townships only. A general policy of snow-ploughing is carried out in Chapleau, McKim, Neelon and Garson, West Ferris, East Ferris, Widdifield and Blezard.

With the exception of the West Ferris mulching no crushed gravel or stone has been used.

Many of the townships have shown a definite improvement in the conduct of their work. Unfortunately Statute Labour ideas are deeply rooted in the minds of many township residents and it is very difficult to create a desire for efficient and economical methods. The creation of better roads is still secondary to earning money on the roads to pay taxes.

DISTRICT No. 14— *Townships in Temiskaming and Part of Cochrane (South).*

Some 25 miles of road were reconstructed during the year, much of which consisted of widening of the old "single track." The comparatively wet season placed considerable emphasis on drainage; this is reflected noticeably in the figures for ditching, both in construction and maintenance. There were 73 pipe culverts installed.

Over 50,000 cubic yards of gravel was placed on the roads about half of which was crushed.

Four wooden bridges were rebuilt and two were replaced with permanent structures and one with a concrete culvert and fill.

Dust Prevention: Oil or calcium was applied to about 40 miles of road.

Snow fence was erected, a total of 17 $\frac{1}{4}$ miles, and 60 miles of road were kept open to traffic all winter with snow ploughs.

DISTRICT No. 18— *Algoma, Manitoulin and Part of Sudbury.*

Small timber bridges were replaced in the following townships: (1) Rutherford and George Island; Fehkummah (3); Thessalon (1); Korah (2); McDonald (3); Baldwin (1); Plummer, additional (1); Hallam (2), and Sandfield (1).

Nairn Township built about a mile of new road north of the Spanish River to avoid running alongside the river where road was continually caving in.

Hallam Township completed a new cut-off in Lee Valley where work had been commenced a few years ago and never completed.

McDonald Township widened and improved greatly the road from Echo Bay to the northern boundary to facilitate timber operations and open roads to lakes for tourists.

All townships have commenced to widen and improve contour of roads.

Other than the above, most of the work was gravelling and general maintenance. It has been necessary to apply most of their effort to this work up to the present to make these roads really passable, as it has only been recently that they have been properly organized.

DISTRICT No. 19 — *Townships in the District of Thunder Bay.*

Construction work in the organized townships in this district was principally as follows:

Clearing 46.45 acres of right-of-way; stumping and grubbing 16.33 acres; ditching 33,082 lineal feet; grading new road, 9.41 miles; existing road, 8.56 miles; 173 cubic yards of rock was hauled and used for rip-rapping; 5,856 cubic yards of earth and 70½ cubic yards of rock excavation was done in ditching and grading.

A total of 120 culverts under 10 feet were constructed, three of them being of a concrete arch type, by the Township of Paipooonge.

A cedar timber cribbing 45 feet long with a 6-foot face was constructed by O'Connor Township for the protection of a bridge over the Whitefish River.

Nineteen hundred and twenty-nine and one-quarter cubic yards of gravel was placed on newly graded roads, and 382 cubic yards on old grades.

The Township of Schreiber laid 1.62 miles of gravel mulch road surface to very good advantage.

Nine wood bridges over 10-foot span were constructed, one of which was in Paipooonge Township, it being 88 feet overall with one 46-foot span, two 14-foot spans with cribs and approaches.

Maintenance consisted of the following:

Roads were dragged as required to keep them in good condition, a total of 3,289½ miles of dragging having been dragged, 3.55 miles of grade repairs were done with 2,556 cubic yards of earth excavation being done during the process of repair; 21,758½ cubic yards of gravel resurfacing and patching were done.

Seventy-two thousand one hundred and seventy-one lineal feet of ditches were cleaned out, 36.75 miles of side brushing and 264.12 miles of weed cutting were done, 16 wood bridges over 10-foot span, two of which were 60-foot spans; 44 wood, 4 galvanized and 11 concrete culverts were repaired and 63 wood culverts were replaced; 330.50 miles of road was kept open for winter traffic and 60 miles of snow fence erected.

DISTRICT No. 20 — *Kenora.*

Work done on various roads within the Township of Ignace: Clearing, 2.0 acres; ditching, 2,000 lineal feet; grading new road, .35 miles; stumping and grubbing, 1.0 acres; grading existing roads, 6.0 miles; concrete culverts, 9.

Maintenance: Ditching, 6,000 lineal feet; redecked and erected new railing on 3 bridges, 15-foot span; pitrun gravel applied, 1,100 cubic yards; cinders applied, 600 cubic yards.

Work done on various roads within the Townships of Sanford, Temple, Langton and West Half of Aubrey, comprising the Municipality of Machin.

Construction: Clearing, 20.0 acres; ditching, 4,600 lineal feet; crosslay, 0.25 miles; grading new road, 2.0 miles; stumping and grubbing, 9.0 acres; grading existing roads, 1.25 miles; wood culverts, 11.

Maintenance: Ditching, 6,200 lineal feet; clay applied, 3,240 cubic yards; pitrun gravel applied, 1,160 cubic yards.

Work done on various roads within the Townships of Jaffray and Melick:

Construction: Clearing, 5.12 acres; ditching, 2,680 lineal feet; grading new road, 1.37 miles; stumping and grubbing, 4.25 acres; grading existing road, 5.50 miles; wood culverts, 10; gravel on new grades, 3.75 miles.

Maintenance: Ditching, 4,560 lineal feet; culverts repaired, 48; roadside maintenance, brushing, weed cutting, etc., 19.25 miles; grader work, 35 miles; pitrun gravel applied, 3,275 cubic yards.

DISTRICT No. 21 — *Townships in the District of Rainy River.*

New grading consisted of 2.80 miles, and regrading existing roads 5.65 miles; 38,425 lineal feet of ditching was done; 3 metal, 1 concrete and 68 timber culverts built; 25.01 acres cleared and 18.65 acres stumped and grubbed; clay fill on burned-out roads, 2,197 cubic yards; rock fill, 379 cubic yards; rip-rap, 30 cubic yards; 3,232 cubic yards of pitrun gravel were put on new grades; 6 bridges over 10-foot span were built.

Maintenance consisted of repairs to 65 timber and 3 tile culverts; side brushing and weed cutting of 201.5 miles; bridges repaired, 13; scarifying centre and shoulders, 32 miles. In maintaining road surfaces, 1,643 cubic yards of clay and 16,790 cubic yards of pitrun gravel were used. Calcium chloride was applied as a dust preventive on 2.0 miles. Snow fence erected, 1.50 miles.

The Municipality of Alberton purchased a Diesel grader with snow plow and wing.

ROAD CONFERENCES

It has been customary for our Branch of the Department of Highways to call a conference in Toronto, during February, of all the county and township road superintendents and engineers who are working under The Highway Improvement Act. In 1939 the annual conference celebrated its twenty-fifth anniversary and was unique in that, for the first time, possible representation covered the entire province.

Several items of interest to county road superintendents remained unsettled from the February conference and it was planned to hold a smaller, a special conference later in the year to discuss these matters. In the meantime the need for several administrative changes arose and a meeting was convened by the Municipal Roads Branch on November 29th and 30th. This was followed by a meeting of Branch officials on December 1st.

For some years it has been felt that an improvement could be made in the system of keeping county and township road accounts, particularly with a view to obtaining more uniform and accurate cost records. Mr. G. E. F. Smith, Chief Accountant of the Department, suggested several changes based on a province-wide study of the various systems at present in use. The proposals outlined by Mr. Smith will be put into effect during 1940.

There has been considerable difficulty as well in the matter of purchasing machinery. In accordance with the regulations concerning the purchase of supplies and materials by municipalities, the Department has had no other choice but allow subsidy on the lowest tender submitted on machines meeting certain specifications. It has been argued that, over a period of years, economy of operation will offset a higher initial cost. The Department has considered many systems of avoiding disputes and unfairness in this connection and has finally come to believe that by subsidizing a fair rental price which will cover initial cost, depreciation, interest and repairs, it will be possible to satisfy all parties

concerned. The rental rate will be the same for all municipalities for similar machines. Operating costs vary greatly throughout the province, so operators' wages, fuel, oil, etc., will be subsidized as formerly.

The Department wishes to thank the county and township engineers, contractors, machinery firms and others who so heartily co-operated by furnishing operating records and other statistics.

1940 CONFERENCES

Due to prevailing conditions at the beginning of 1940 it was deemed inadvisable to hold the annual conference on road improvement for county and township road superintendents and engineers.

At the beginning of 1940 four district conferences were held but only two came within the 1939-40 fiscal year. The first was held at Chatham for the municipalities of Essex, Kent and Lambton counties on March the 12th and 13th, 1940, and was the Twelfth Annual Conference for District No. 1. The second was the Thirteenth Annual Conference at London on March 15th and 16th, 1940, for the county and township road superintendents in District No. 2, which takes in the counties of Elgin, Middlesex, Norfolk and Oxford. Both were highly successful.

INDIAN RESERVES

Parry Sound, Shawanaga and Gibson Indian Reserves took aid under The Highway Improvement Act for the first time in 1939, thus raising the total of Reserves eligible to seventeen. The total expended on Reserve roads was \$41,250.24, and the government subsidy \$22,048.42.

Indian Reserve	Expenditure
Alnwick.....	No Return
Cape Croker.....	\$ 3,891.10
Caradoc.....	2,500.00
Gibson.....	998.68
Kettle and Stony Point.....	866.67
Moravian.....	850.00
Mud Lake.....	900.00
New Credit.....	1,000.00
Parry Island.....	948.94
Rama.....	625.00
Rice Lake.....	272.94
Sarnia.....	1,071.34
Saugeen.....	797.95
Shawanaga.....	985.96
Six Nations.....	20,535.41
Tyendinaga.....	3,006.25
Walpole Island.....	2,000.00
	\$ 41,250.24

CONCLUSION

Several county engineers left soon after the outbreak of war to take their places in the armed forces of the Empire and the Department has asked that municipalities adopt the system in vogue in the provincial government of making only temporary appointments to fill such vacancies so that when a man returns from active service he may resume his previous position.

The Department desires to acknowledge the friendly co-operation of the county and township engineers and road superintendents and of the Suburban Commissions in the work carried out during the year. The Department is especially pleased over the attitude of the various municipalities toward the reduced appropriations made necessary by war conditions. The thoughtfulness and efficiency with which the appropriations were used is much appreciated.

APPENDIX No. 3

SCHEDULE OF ASSUMPTIONS AND REVERSIONS OF SECTIONS OF THE KING'S HIGHWAY SYSTEM FOR THE FISCAL YEAR ENDING MARCH 31st, 1940.

During the year the system was extended by assuming 74.93 miles, less 48.27 miles reverted, making a total assumed of 26.66 miles. A list of the roads added to the system, together with the mileage and date of designation, also a list of roads and mileages reverted from the system is as follows:

The King's Highways Assumed Between March 31st, 1939, and March 31st, 1940.

DISTRICT OR COUNTY	LOCATION OF ROAD	ASSUMED DATE	MILES
Lincoln	N. Grimsby Twp. (Q. E. W.)	Nov. 29, 1939	1.02
Lincoln	Clinton Twp. (Q. E. W.)	Nov. 29, 1939	0.26
Lennox and Addington	Sheffield	Jan. 24, 1940	0.53
Oxford	Town of Tillsonburg	May 3, 1939	0.35
Simcoe	Essa Twp. (Angus)	Sept. 27, 1939	0.40
Waterloo	Village of Elhira	May 3, 1939	0.42
Waterloo	N. Dumfries Twp.	June 7, 1939	1.70
Wentworth	Saltfleet Twp. (Beach Road)	July 5, 1939	0.17
Wentworth	Saltfleet Twp. (Q. E. W.)	Nov. 29, 1939	0.21
Wentworth	Saltfleet Twp. (Q. E. W.)	Nov. 29, 1939	0.37
Welland	City of Niagara Falls	Oct. 4, 1939	1.60
Welland	Village of Fonthill	Nov. 8, 1939	0.87
Welland	City of Niagara Falls (Sts. at Bridge App.)	Feb. 14, 1940	0.00
York	Etobicoke Twp.	Nov. 29, 1939	0.04
York	Town of Leaside (Donald Drive)	Dec. 6, 1939	0.67
Assumed by Land Plan			
Algoma	Pt. Mamainse to Montreal River		16.00
Hastings	Wicklow Twp.		2.55
Lambton	Blue Water Bridge Approach		4.25
Middlesex	Williams E. Twp.		.87
Muskoka	Chaffey and Brunel Twps.		2.50
Parry Sound	Pt. au Baril to Britt		21.50
Peterboro	Burleigh Falls Westerly		6.67
Sudbury	Baldwin, Shakespeare and Hallam Twps.		9.90
Welland	Wainfleet Twp.		2.08
			74.93

Reversions in the Fiscal Year Ending March 31, 1940.

Elgin	Vienna Village	Oct. 30, 1939	0.39
Hastings	Millbridge N.	April 11, 1939	25.60
Hastings	Wicklow Twp.	Oct. 30, 1939	2.65
Huron	Usborne Twp.	Oct. 30, 1939	0.27
Lennox and Addington	Sheffield Twp. (Erinsville)	Mar. 10, 1940	0.50
Muskoka	Chaffey and Brunel Twps.	Mar. 10, 1940	2.75
Middlesex	Williams E. Twp.	Aug. 28, 1939	1.00
Middlesex	Biddulph Twp.	Oct. 30, 1939	0.14
Oxford	Blenheim Twp.	June 19, 1939	0.50
Perth	Fullarton Twp.	Oct. 30, 1939	0.27
Perth	Blanchard Twp.	Nov. 19, 1939	0.40
Peterborough	Harvey Twp.	Jan. 7, 1940	6.71
Victoria	Ops Twp.	Feb. 2, 1940	0.29
Victoria	Ops Twp.	Feb. 2, 1940	0.24
Waterloo	N. Dumfries Twp.	July 7, 1939	1.20
Welland	Wainfleet Twp.	July 20, 1939	2.27
Welland	Stamford Twp. and Niagara Falls	Aug. 28, 1939	0.50
Wentworth	Saltfleet Twp.	Aug. 28, 1939	0.10
York	Scarborough Twp. (Kingston Road)	June 9, 1939	1.45
York (Eglinton Ave.)	Town of Leaside	Dec. 16, 1939	1.04

Report of the Motor Vehicles Branch, 1939

TO THE HONOURABLE T. B. McQUESTEN,
Minister of Highways.

SIR:

I have the honour to submit herewith a report of the activities of the Motor Vehicles Branch for the year 1939:

This report includes:

- (a) A detailed summary of the motor vehicle permits and drivers' licenses issued for the 1939 license year ending March 31, 1940.
- (b) A statement, duly certified by the Provincial Auditor, showing the revenue derived from all sources during the fiscal year ending March 31st, 1940.
- (c) Reports dealing with the Accident Recording and Financial Responsibility Divisions of the Branch during the calendar year.

Motor Vehicle Registrations

Vehicles registered during 1939 exceeded the total for any previous year in the history of the motor vehicle in this Province. Comparative figures for 1938 and 1939 and the percentage advances from the 1938 totals are shown in the table below:

TYPE OF PERMIT	1938	1939	
Passenger	580,364	593,693	2.3% Inc.
Commercial	81,642	82,206	0.7% Inc.
Two-Purpose	1,876	1,893	0.9% Inc.
Trailer	39,059	41,586	6.5% Inc.
Motoreycle	5,206	5,099	2.1% Dec.
Total	708,147	724,477	2.3% Inc.

Drivers' Licenses

Driving licenses (including 99,360 Instruction Permits) issued during 1939 totalled 998,932 or 2.4 per cent. more than the 1938 total (975,722).

Revenue

The Branch collected almost three quarters of a million dollars more revenue than during the previous fiscal year. Gross revenue amounted to \$8,938,843.86. After deductions covering commissions, refunds and adjustments \$8,681,936.75 was transmitted to the Treasury Department.

Public Vehicle Division

During the operating year of 1939 the number of Public Vehicle and Public Commercial Vehicle registrations was increased about 8.5%, with an increase in revenue of \$20,635.35.

The high standard of Public Vehicle operations throughout the Province has been maintained and the policy of refraining from granting licenses over duplicating routes, except where proof of public necessity and convenience is shown, has resulted in improvements in equipment and dependable service to the public.

The Public Commercial Vehicle operators have co-operated splendidly with the Department which has resulted in fewer prosecutions for major infractions of the Commercial Vehicle Act and, as a whole, these operations have been raised to a much higher standard.

The year witnessed an increase in the number of "school buses" operating in various parts of the Province from twenty in 1938 to sixty-one in 1939.

No fee is charged for these buses which are used solely for the transportation of pupils to and from school and which have proved very beneficial, particularly in rural districts.

Public Vehicle registrations totalled 899, an increase of 71, while Public Commercial Vehicle registrations increased by 627 to 7,949. The revenue of this Division amounted to \$428,003.51.

Accident Recording Division

Reported motor vehicle traffic accidents (involving personal injury or property damage in excess of \$50.00) totalled 13,710 during 1939, and resulted in 652 deaths, injury to 11,638 persons and a direct damage loss to vehicles and other property amounting to \$1,860,264. There was a slight reduction from the previous year's totals in the number of accidents and injuries, but an increase in the number of deaths and in the amount of property damage reported. The death rate showed very little change from 1938 and was considerably below the 1937 rate.

(More complete data with regard to Ontario accident experience during 1939 are given in the summary appended hereto. Also refer to special study covered in the 'Ontario Traffic News' for June, 1940.)

In addition to its duties as a central bureau for the collection, compilation and analysis of motor vehicle accident statistics, this Division has given increasing attention to the individual driver, in particular, those who have shown frequent or flagrant disregard of the regulations, and those who because of lack of experience, or age, physical or mental handicaps are more accident-liaible. The importance of this field of activity has been recognized by the various law enforcement agencies, insurance companies, health departments and the medical profession, as well as a large number of the general public and an increasing number of cases requiring attention have thus been brought to light and dealt with each year. These efforts directed towards the individual, together with enforcement and educational efforts designed to bring the rules of safe practice to the attention of the general public, would seem to be the fields of activity by which this Division may produce the most beneficial results in promoting safer travel on the streets and highways of Ontario.

Financial Responsibility Division

During this year there were 6,317 suspension orders issued by this Division. Of these, 5,211 applied to both drivers' licenses and motor vehicle permits and required the filing of proof of financial responsibility. Most of the others affected drivers' licenses only and were effective for various periods of time. On December 31st, 1939, there were 14,252 financial responsibility orders in effect.

All of which is respectfully submitted,

J. P. BICKELL,

Registrar of Motor Vehicles.

ANNUAL REPORT OF THE FINANCIAL RESPONSIBILITY DIVISION FOR THE YEAR 1939

For the first time in five years the total number of suspension orders issued fell below the total of the preceding year. This was a result, not of decreased activity in this Division but of a change in the legislation governing the issuance of financial responsibility suspensions, and by the enactment of the "careless driving" provision to replace the former "reckless driving" provision which had been nullified by Dominion legislation covering the same offence. The alteration with respect to reckless driving required the issuance of a financial responsibility suspension only when the offence caused an accident and was made retroactive to the date the Dominion legislation became effective with the result that a substantial number of suspension orders issued during 1938 were rescinded. The careless driving provision did not authorize suspension of license by the magistrate and required the filing of proof of financial responsibility only when the offence was connected with an accident. For purposes of comparison the suspensions resulting from both careless and reckless driving have been grouped in this report under the former heading of reckless driving.

As in previous years, reckless driving convictions accounted for the greatest number of suspensions, in 1939 almost 50% of the total. The number of suspensions as a result of convictions for having care or control of a motor vehicle while intoxicated decreased appreciably.

During the years 1938 and 1939 there were 287 unsatisfied judgments for damages occasioned by motor vehicles reported to the department. This was approximately 50% of the total reported during the previous seven years. It is a consequence, however, of the reduction of the minimum under which action can be taken, with respect to judgments for property damage only, from \$100.00 to \$25.00, rather than to any apparent tendency of judgment debtors to ignore their obligations. During these same years 90, or approximately one third of those suspended for this reason, did arrange for settlement of the judgments and were reinstated upon the filing of proof of financial responsibility.

The campaign for the removal of unfit drivers from our roads by the use of the authority vested in the Minister of Highways to revoke driving privileges was continued and some 700 suspension orders were issued under this authority. Those affected were deemed unfit to hold drivers' licenses because of mental or physical disability or because of operating records which showed them to be incompetent, irresponsible or contemptuous of the requirements of law. In most cases these suspensions are intended to be permanent. The splendid assistance and whole-hearted co-operation of the Department of Health has been an important factor in this campaign.

Table I appended hereto shows the number of financial responsibility suspensions which have been issued in 1938 and 1939, and during the entire period this legislation has been in effect. Table II shows the number of suspensions rescinded during the same periods. Comparison of the two tables shows that there were 14,252 financial responsibility suspensions remaining in effect on December 31st, 1939.

Table III shows the number of suspension orders for various causes which did not carry with them the requirement that proof of financial responsibility be filed. These include suspensions made effective by the courts throughout the Province as well as those given effect by the Department. No statistics are prepared as to the expiration of these suspensions so that it is not possible to state how many remained in effect at the end of the year. It can be estimated, however, that not less than 2,000 were still effective at that time. Adding the financial responsibility suspensions it may be seen that at the close of the year more than 16,000 persons were denied the use of Ontario streets and highways as operators of motor vehicles.

FINANCIAL RESPONSIBILITY SUSPENSIONS
September 1, 1930, to December 31, 1939

ANNUAL REPORT
OF
THE COMMISSIONER
OF THE
ONTARIO PROVINCIAL POLICE
FROM
JANUARY 1st, 1940 TO DECEMBER 31st, 1940

PRINTED BY ORDER OF
THE LEGISLATIVE ASSEMBLY OF ONTARIO
SESSIONAL PAPER No. 34, 1941

ONTARIO

TORONTO

Printed and Published by T. E. Bowman, Printer to the King's Most Excellent Majesty
1941

*To His Honour Albert Matthews, Esq.,
Lieutenant-Governor of the Province of Ontario.*

MAY IT PLEASE YOUR HONOUR:

The undersigned has the honour to present to Your Honour the Report of The Commissioner of the Ontario Provincial Police covering the period January 1st, 1940, to December 31st, 1940.

Respectfully submitted,

G. D. CONANT,
Attorney-General.

Attorney-General's Department.

In Memoriam

PROVINCIAL CONSTABLE A. J. FERGUSON, Motorcycle Patrol,
Hawkesbury Detachment.

Appointed 12-7-30. Died May 13th, 1940, from injuries received when thrown from his motorcycle whilst patrolling Highway No. 34, Vankleek Hill.

PROVINCIAL CONSTABLE N. R. GARDNER, Motorcycle Patrol,
Dunnville Detachment.

Appointed 12-7-30. Died June 17th, 1940, in the Dunnville Hospital after a serious illness.

PROVINCIAL CONSTABLE H. H. DENT, Rockland Detachment.

Appointed 25-1-31. Died June 20th, 1940, at Navan Railroad Station as a result of being shot by one John Miki, whose suspicious movements he was investigating.

PROVINCIAL CONSTABLE D. L. PICKELL, Motorcycle Patrol, Mimico Detachment.

Appointed 1-4-40. Died July 2nd, 1940, at St. Joseph's Hospital, Toronto, from injuries received when thrown from his motorcycle whilst patrolling the Queen Elizabeth Way.

PROVINCIAL CONSTABLE P. C. MCCOY, Goderich Detachment.

Appointed 8-10-23. Died July 10th, 1940, at the General Hospital, Goderich, from complications resulting from an attack of Typhoid Fever.

Report of the Commissioner of Police for Ontario

From January 1st, 1940, to December 31st, 1940

ONTARIO PROVINCIAL POLICE,
Headquarters, Toronto.

THE HONOURABLE THE ATTORNEY-GENERAL,
Parliament Buildings, Toronto, Ontario.

SIR:

I have the honour to submit herewith my report covering the activities of the Ontario Provincial Police together with statistical data for the period January 1st to December 31st, 1940.

The continuation of hostilities between the British Empire and Germany with the inclusion of Italy necessitated considerable augmentation of the Force for protective measures by the appointment of auxiliaries with corresponding increase of duties imposed upon all ranks of the Force.

The highly creditable manner in which the citizens of the Province have come forward to collaborate with the Force in the formation of protective bodies is most praiseworthy.

The following voluntary auxiliary bodies affiliated with this Force have been formed and are functioning in an excellent manner.

The Volunteer Civil Guards with a strength of approximately 40,000.
The Ontario Volunteer Constabulary.
The Mobile Column, A.R.P.

Occurrences reported to and investigated by the Force compare favourably with former years, there being a slight decrease in both major and minor offences.

The Force has been active to restrain gambling places and houses of ill-fame where the responsibility of law enforcement was ours.

When complaints were received regarding gambling in municipalities that had a properly organized police force, such complaints were forwarded to the authorities of the municipality concerned with the intimation that if assistance were required to deal with the matter such assistance would be given by the members of this Force.

Very extensive efforts have been made during the year by means of radio, the press, public speakers and other methods, in an earnest endeavour to lessen the alarming number of fatal accidents on highways throughout the Province.

There is some evidence that the continued intensified efforts are having good effects.

I have personally visited and inspected the Headquarters of all twelve districts during the year.

At each District Headquarters the members of the Force were addressed collectively and individually and inspection made of uniform, office equipment and automobiles.

I also conferred with Crown Attorneys, Magistrates and the local Police Officials regarding matters affecting law enforcement and found a general spirit of co-operation and good-will combined with confidence in the work of members of the Force.

Staff Inspectors have also periodically visited District Headquarters and Detachments advising and instructing the personnel in matters affecting the Force.

Data relating to the general activity of the Force will be found in the reports submitted by District Inspectors and the Officer-in-charge of the various Branches and Auxiliaries under sub-heads of this Report or on file in my office.

For purposes of administration the Province is divided into twelve Districts numbered consecutively one to twelve as follows:—

- No. 1 District, Headquarters Windsor—
comprising the Counties of Essex and Kent.
- No. 2 District, Headquarters London—
comprising the Counties of Lambton, Middlesex, Elgin and Oxford.
- No. 3 District, Headquarters Hamilton—
comprising the Counties of Wentworth, Halton, Brant and Norfolk.
- No. 4 District, Headquarters Niagara Falls—
comprising the Counties of Haldimand, Lincoln and Welland.
- No. 5 District, Headquarters Toronto—
comprising the Counties of York, Peel and Ontario.
- No. 6 District, Headquarters Kitchener—
comprising the Counties of Bruce, Perth, Grey, Wellington, Waterloo and Huron.
- No. 7 District, Headquarters Barrie—
comprising the Counties of Simcoe and Dufferin, and the Districts of Muskoka and Parry Sound.
- No. 8 District, Headquarters Belleville—
comprising the Counties of Victoria, Haliburton, Peterborough, Northumberland and Durham, Hastings, Lennox and Addington, Prince Edward and Frontenac.
- No. 9 District, Headquarters Perth—
comprising the Counties of Renfrew, Lanark, Dundas, Carleton, Grenville, Russell, Prescott, Stormont, Glengarry and Leeds.
- No. 10 District, Headquarters Haileybury—
comprising the Districts of Temiskaming, Cochrane, Nipissing and a portion of Algoma.
- No. 11 District, Headquarters Sudbury—
comprising the Districts of Sudbury, Manitoulin Island and a portion of Algoma.
- No. 12 District, Headquarters Port Arthur—
comprising the Districts of Kenora, Rainy River, Thunder Bay and Patricia.

CHANGE IN PERSONNEL

On May 21st, 1940, Herbert S. McCready, ex-Sergeant of Detectives, Toronto Police Department, was appointed Deputy Commissioner of Police for Ontario.

Acting Chief Inspector A. B. Boyd of the Criminal Investigation Branch was retired on superannuation June 1st, 1940. Inspector Boyd had been a member of the Force attached to the Criminal Investigation Branch for upward of thirty years during which period he had given to the Province faithful and efficient service.

By Order-in-Council dated February 29th, 1940, District Inspector W. T. Moore was retired on superannuation by reason of physical disability (impairment of sight). Inspector Moore was an able administrator and left behind him an enviable record of efficiency during his connection with the Force.

During the period January 1st to December 31st, 1940, the following appointments to and retirements from the Force became effective:—

APPOINTMENTS

Deputy Commissioner.....	1
Provincial Constables.....	3

(Two of the above were promotions—one clerk and one chauffeur.)

MEMBERS OF THE FORCE "KILLED ON DUTY"

Provincial Constable A. J. Ferguson, Motorcycle Patrol, Hawkesbury Detachment

On May 23rd, 1940, whilst Provincial Constable A. J. Ferguson of the Motorcycle Patrol was patrolling King's Highway Number 34, near Vankleek Hill, he collided with the rear of an automobile and was thrown heavily from his motorcycle, receiving serious injuries from which he died the same day.

Provincial Constable Ferguson was an excellent patrol officer doing difficult work in a praiseworthy manner. He gained and held the respect of the community in which he worked and his death was a distinct loss to the Force.

Provincial Constable H. H. Dent, Rockland Detachment

On June 20th, 1940, Provincial Constable H. H. Dent of Rockland was shot and killed at Navan Station by a foreigner whose suspicious actions he was investigating.

A short time later the murderer (whose fingerprints identified him as John Miki, a Finlander of Montreal) was shot and killed by Acting Sergeant A. Stringer of Timmins who was spending his Annual Leave at Navan and responded to the alarm. Sergeant Stringer, as soon as possessed of the facts, took the revolver from his dying comrade and courageously pursued the murderer into the adjacent bush. The murderer, who was armed with a .45 calibre Colt automatic pistol, fired three shots at close range at Sergeant Stringer without effect and was shot and killed by one shot fired by Stringer from Constable Dent's revolver.

All Provincial Constable Dent's service with the Force had been spent at his original post, Rockland, where he was held in the highest esteem, not only locally but throughout the whole County of Russell. The spontaneous expressions of sympathy from all sections of the public and members of the several Police Forces he came into contact with, coupled with the striking tribute to his sterling worth voiced by his minister at the funeral, left no doubt as to the value of Constable Dent as a law enforcement officer.

Provincial Constable D. L. Pickell, Motorcycle Patrol, Mimico Detachment

On July 2nd, 1940, whilst Provincial Constable D. L. Pickell of the Motorcycle Patrol was patrolling the Queen Elizabeth Way he was thrown from his motorcycle and crashed heavily to the cement roadway. He was given medical

attention at the scene of the accident and taken to St. Joseph's Hospital where he died without regaining consciousness.

Provincial Constable Pickell had been appointed less than three months and was still on probation. He was an extremely fine type of man with apparently all the requisites to make a valued member of the Force.

ENLISTMENTS

The following members of the Force have been granted Leave of Absence for War Services:—

Name	Rank	Date of Enlistment	Unit
F. B. Creasy	District Inspector	Mar. 19, 1940	Lieut. 2nd Provost Coy., C.A.S.F.
C. P. McCarthy	Clerk	Sept. 19, 1939	Ont. Tank Regiment, C.A.S.F.
G. Mackay	Inspector, C.I.B.	July 17, 1940	Lieut. 3rd Provost Coy., C.A.S.F.
F. G. Jerome	Area Insp., M.C.P.	Oct. 17, 1939	Fl. Lt. (A.P.M.) R.C.A.F.—Resigned
A. Swan	Clerk	May 6, 1940	Provost Coy., 2nd Div., C.A.S.F.
W. H. Boyd	Insp. of Autos	Nov. 6, 1939	Fl. Lt. (Service Police), R.C.A.F.
I. R. Robbie	Prov. Constable	May 22, 1940	Capt. (O.C. 3rd Provost Coy.), C.A.S.F.
J. W. Callander	Prov. Con., M.C.P.	Oct. 11, 1940	11th Provost Coy., C.A.S.F.
L. C. Carr	Prov. Constable	May 6, 1940	Fl. Officer (A.P.M.), R.C.A.F.
G. V. Clubbe	Prov. Constable	Aug. 7, 1940	Lieut. 4th Provost Coy., C.A.S.F.
J. D. Crosson	Prov. Constable	Aug. 27, 1940	3rd Provost Coy., C.A.S.F.
A. J. Davies	Prov. Con., M.C.P.	June 12, 1940	Lieut. R.C.A.M.C.—Resigned
R. G. France	Prov. Constable	May 11, 1940	Fl. Officer (A.P.M.), R.C.A.F.
W. Gilling	Prov. Constable	May 30, 1940	2nd Provost Coy., C.A.S.F.
J. M. Hackl	Prov. Constable	Nov. 16, 1939	(Service Police), R.C.A.F.
J. M. Hinchliffe	Prov. Con., M.C.P.	Aug. 14, 1940	Lieut. Princess Louise Rifles
G. Hughes	Prov. Constable	Aug. 4, 1940	Cameron Highlanders, C.A.S.F.
R. E. Johnson	Prov. Constable	June 20, 1940	Cpl. 3rd Provost Coy., C.A.S.F.
W. A. Kennedy	Prov. Con., M.C.P.	June 1, 1940	48th Highlanders, C.A.S.F.
A. M. Mason	Prov. Constable	June 20, 1940	F.O. (A.P.M.), R.C.A.F.
A. McColl	Prov. Constable	Sept. 11, 1940	c/o British Admiralty, Trinidad
A. L. Mennie	Prov. Constable	Aug. 3, 1940	47th Field Batt., C.A.S.F.
T. W. Oldfield	Prov. Constable	Oct. 9, 1940	11th Provost Coy., C.A.S.F.
R. E. Raymond	Prov. Constable	June 20, 1940	F.O. (A.P.M.), R.C.A.F.
J. B. Sheff	Prov. Constable	June 7, 1940	Capt. 4th Provost Coy., C.A.S.F.
L. L. Shipley	Prov. Constable	Aug. 7, 1940	Lieut. 4th Provost Coy., C.A.S.F.
W. E. Smith	Prov. Constable	Aug. 5, 1940	Royal Canadian Artillery, C.A.S.F.
A. A. Stark	Prov. Constable	Oct. 9, 1939	Lieut. 154th Battalion
R. J. Taggart	Prov. Constable	Sept. 2, 1940	Lieut. Queen's York Rangers, C.A.S.F.
L. R. Taylor	Prov. Constable	Oct. 14, 1940	R.C.A.F.
S. Ervine	Prov. Con., M.C.P.	July 3, 1940	Lt. Hastings Prince Edw. Regt., C.A.S.F.

CONDUCT AND DISCIPLINE

The conduct and discipline of all ranks has with a few exceptions been excellent, and the members of the Force have shown a commendable spirit of loyalty and efficiency in dealing with all matters brought to their attention.

The value of the work done by members of the Force on detachment duty cannot always be measured by statistical records. There are many problems satisfactorily handled that are not statistically recorded.

COMMENDATIONS

Sixty-one members of the Force were commended in Police Orders during the year for their devotion to duty and the exceptionally efficient and thorough manner they carried out their duties in connection with the matter under investigation or as the case may be.

ARMS AND EQUIPMENT

Since the outbreak of the present war, all members of the Force have been equipped with 12-gauge "riot type" repeating shotguns in addition to their present issue of .38 calibre Colt revolvers.

Every District Headquarters has also been supplied with a quantity of 30.30 calibre Winchester carbines and Thompson Sub-Machine guns, and the personnel have been trained in the proper use and care of such weapons.

SERVICE REVOLVER COMPETITION
"MARKSMANSHIP"

In the Ontario Section of the Revolver Competition held by the Chief Constables Association of Canada, 1940, the team representing this Force under the expert tuition of their Captain, Sergeant D. H. Darby, Motorcycle Patrol, gave a most excellent account of themselves by winning the trophy.

TABLE OF SCORES—ONTARIO PROVINCIAL POLICE TEAM

Sergeant D. H. Darby (M.C.P.), No. 3 D.H.Q., Hamilton.....	393
Prov. Con. J. A. Rowe, No. 5 D.H.Q., Toronto.....	381
Prov. Con. E. A. Hoath, Fort Erie, No. 4 District.....	380
Prov. Con. W. B. Elliott, Alliston, No. 7 District.....	375
Prov. Con. T. W. Oldfield, Listowel, No. 6 District.....	357
	1,886

SCORES OF ALL ONTARIO TEAMS COMPETING

Ontario Provincial Police.....	1,886 x 2,000
Toronto City Police, Team No. 1.....	1,878
Village of Forest Hill, Team No. 1.....	1,875
Toronto City Police, Team No. 2.....	1,835
Village of Forest Hill, No. 2.....	1,769
Fort William City Police.....	1,691
St. Catharines City Police.....	1,417
Hamilton City Police.....	1,224

In addition to the Ontario Provincial Police team being first in the Competition, Sergeant D. H. Darby attained the highest individual score for all competitors in Canada.

OFFICE AND CELL ACCOMMODATION

New buildings were erected at the following detachments:—

Favourable Lake, Berens River Mines Detachment, District of Patricia:

A new detachment was opened at Favourable Lake in December, 1939, to provide Police service for the new mining district under development in that area.

At first difficulty was found in locating any place suitable for living quarters or office accommodation and the detachment was given facilities in one of the mine bunkhouses.

Eventually an arrangement was effected with the Berens River Mine Company to construct a building containing living quarters and cell accommodation.

The detachment now occupies suitable quarters with good facilities for a married man in addition to an up-to-date office and cement cells for prisoners.

Gold Park and WaWa Detachments, District of Algoma:

Owing to the closing down of a number of Gold Mines in the Gold Park area and the consequent reduction of population, the building which was put at our disposal, by the mining companies, for use by the Gold Park Detachment as living quarters and Police Office, was sold over our heads.

The detachment was transferred to WaWa where iron deposits were being developed by the Algoma Ores Limited and over a thousand persons were resident.

The same problem was presented here, lack of living and office accommodation. To assist in rectifying this, the Helen Iron Mine, as an inducement to keep the detachment at WaWa, constructed (for the use of the member of the Force doing duty there) a frame building on cement foundation containing living quarters, Police Office and cell accommodation.

The building is on the mining company property and is favourably situated about three hundred (300) yards from the Railroad Station on the Algoma Central Railway.

Red Lake Detachment, District of Patricia:

During the summer of 1940 a much needed want was filled by the erection of a building containing Police Office and cells for use by the Red Lake Detachment.

The building is single storied, 12 feet by 24 feet, built on Crown Land on a 60-foot water front, divided into two sections, one for an office and one containing two cells, and was erected by arrangement between the Mining Company and the Department of Public Works, under the supervision of a member of the Force.

The management of four of the six gold mines supplied the labour and the services of a foreman carpenter and the Department of Public Works provided the material for the building. The cells were formerly used in a Police building occupied by members of the Force when a detachment was located at Gold Pines. As Red Lake and surrounding territory developed, Gold Pines was practically abandoned, the building was sold and the detachment and cells transferred to Red Lake.

Until the building was completed, each time an arrest was made the prisoner had to be detained in a hotel room by the officer until he could be taken outside or the Magistrate came in, as the case may be.

Pickle Lake Detachment, District of Patricia:

By arrangement with the management of the Pickle Crow Gold Mines, a suitable building, containing living quarters, Police Office and cells, was erected during the summer of 1940.

In the agreement it was provided that the Province would supply the cells to be erected in the building.

With the co-operation of the Department of Public Works, two cells which were not in use in the basement of the Court House at Kenora were dismantled and shipped, one to Pickle Lake and the other to Uchi Lake, where they were erected in the new building thereby providing safe detention for prisoners until they could be dealt with.

Uchi Lake Detachment, District of Patricia:

Similar arrangements as made with the Pickle Crow Mine Officials were made with the Lake St. Joseph Transportation Company, Limited, to provide for our detachment at Uchi Lake. A building containing suitable living quarters, including Police Office and cell facilities, was erected.

This building was erected during the summer and by agreement the Province supplied the cells in a manner similar to that carried out at Pickle Lake.

The thanks of the Department are due the mining companies who co-operated in supplying living and office facilities at the above detachments, thereby enabling the members of the Force to give more efficient service at these outlying and difficult posts.

CRIMINAL INVESTIGATION BRANCH ACTIVITIES

During the year officers of this Branch investigated nine murder cases, the most of which were domestic, one for gain, the balance being as a result of drinking bouts, with an element of domestic trouble added.

Firearms were the weapons used in nearly all these cases, a butcher-knife was used in one. It cannot be said that any of the murder cases arose from present war conditions, directly or indirectly.

The work of the staff of this Branch has been most satisfactory, and cases, particularly those of a serious nature, have been investigated with a high degree of efficiency, which resulted in conviction in a large majority of cases.

At the beginning of the year, Edward F. Wright, clerk in the office, was appointed a Constable of the Force, attached to the Criminal Investigation Branch, and since that time has been in charge of the photography and fingerprint section. His work has been accepted as evidence in many cases throughout the Province, particularly in that of photography. Constable Wright has also assisted and co-operated with other Departments of the Provincial Government in photographing various documents, in which Infra-Red photography system has been used, with great success.

The Anti-Sabotage Squad has operated extensively over the Province, particularly in those centres where industries are engaged in war work, and I am pleased to report that serious cases of sabotage are at a minimum.

I have pleasure in reporting that during the year continued co-operation has been had from the police departments of Canada and the United States in conducting investigations from this office, particularly the Royal Canadian Mounted Police and the Toronto Police; also the police of both railway systems and other municipal police within the Province.

On the 1st of June, Albert B. Boyd, Acting Chief Inspector, who had been a member of the Force for over thirty years, and who had investigated with a large measure of success many major crimes in his time, retired on superannuation. Inspector Boyd had rendered faithful, conscientious and efficient service to the Province.

On May 21st, Herbert S. McCready, formerly Sergeant of Detectives, Toronto Police Department, with which service he had been for twenty-eight years, was appointed Deputy Commissioner, Ontario Provincial Police.

The Deputy Commissioner was also appointed a Magistrate in and for the Province of Ontario, on the 18th of September, 1940.

Also attached are particulars on the formation of the Civilian Defence Committee (A.R.P.) scheme, organized throughout the Province.

CIVILIAN DEFENCE COMMITTEE (A.R.P.)

An Order-in-Council dated September 12th, 1940, reads as follows:—

“Whereas the Federal Government has provided for the appointment of a Civilian Defence Committee (A.R.P.) by Section 33, Subsection 1, of the Defence of Canada Regulations for the better protection of the people of the Province of Ontario against hostile action;

“And Whereas the objects of the said Civilian Defence Committee (A.R.P.) are as follows:

- (a) To create in the Province of Ontario a volunteer civilian organization to meet emergencies occasioned by war.
- (b) To protect life and property in Ontario from every form of attack.
- (c) To assist the civil powers by co-operating with all police and other law enforcement agencies.
- (d) To combat subversive activities.
- (e) To assist in fighting fires resulting from sabotage or other acts of war.
- (f) To instruct the civilian population in emergency services.
- (g) To co-operate with and assist all Federal and Provincial authorities in the performance of duties relative to the objects of this organization;

“And Whereas by letter dated the 12th day of September, 1940, the Honourable the Prime Minister of Ontario has requested the Honourable Ian Mackenzie, Minister of Pensions and National Health, to appoint the Honourable Gordon D. Conant, Attorney-General for Ontario, as Provincial Chairman of the said Civilian Defence Committee (A.R.P.) for the said Province of Ontario, with power to add such persons as the Chairman may determine, without remuneration, to make effective the said Committee in Ontario.

“And Whereas the Honourable Gordon D. Conant, as Provincial Chairman of the Civilian Defence Committee (A.R.P.) for the Province of Ontario, has appointed the following to the offices set opposite their respective names—

Chairman—Honourable Gordon D. Conant, K.C.

Vice-Chairman—H. S. McCready, Deputy Commissioner, O.P.P.

Secretary—

DIRECTORS

1. Director of Police Services—H. S. McCready, Deputy Commissioner of Ontario Provincial Police.

2. Director of Fire Services—W. J. Scott, Fire Marshal.
3. Director of Medical Services—Dr. B. T. McGhie, Deputy Minister of Health.
4. Director of Public Utility Services—R. A. McAllister, Deputy Minister of Public Works.
5. Director of Transportation—R. M. Smith, Deputy Minister of Highways.

"The Prime Minister, therefore, recommends that the objects of the Civilian Defence Committee (A.R.P.) of the Province of Ontario, and the appointments as above set out, be approved by Your Honour.

"The Committee of Council concur in the recommendation of the Honourable the Prime Minister, and advise that the same be acted on."

Following this, meetings were held to discuss the system to be adopted and it was decided that the plan of organization should follow that established in Great Britain with certain modifications to suit Canadian conditions and varying needs.

After consultation with representatives of the Military Districts 1 and 2, and the Federal A.R.P. Officer, fourteen vulnerable areas were established, and the municipalities included in each area listed. This list was later revised to include a number of municipalities contiguous to those in the original list.

The Councils of these municipalities were furnished with copies of an Organization and Instruction Manual prepared for the purpose of instructing them how to proceed to form local committees.

On Tuesday, November 5th, 1940, the Provincial Committee co-operated with the St. John Ambulance Association and the St. John Ambulance Brigade at a very successful demonstration at the Varsity Arena.

During the week of November 18th-23rd, 1940, a course of instruction in Civilian Defence Organization and Air Raid Precautions was given to a group consisting of members of the Provincial Police, Highways and Health Departments. From this group, fourteen regional officers from the Provincial Police and Highways Departments were appointed, one for each of the regional areas designated. The duties of these officers are to act as a liaison between the provincial and local committees, and to assist in the organization locally.

Consideration has also been directed to additional training which will be given to the members of the various services under this Civilian Defence Committee scheme, viz., Police, Fire, Medical, Public Utility and Transportation, and it is proposed that additional handbooks will be printed for this purpose. These will be printed in sufficient quantity to supply the officials and the instructors in the various services concerned.

The equipment and material which has been provided by the Federal authorities has been allotted on a population basis to the various municipalities.

Up until December 31st, 1940, Civilian Defence Committee units were organized in the following municipalities:

Niagara Falls, Chippawa, Owen Sound, Sarnia, Point Edward, St. Catharines,

Windsor, Toronto, East York, Forest Hill, Etobicoke, Port Credit, Swansea, Toronto Township.

SPECIAL BRANCH

At the outbreak of war, a "Special Branch" was created to combat subversive activities and specialize in anti-sabotage and counter-espionage operations. Primarily, the personnel consisted of an Inspector in charge, a clerk-stenographer and four special agents. The Branch has been augmented and now includes an Inspector, two clerk-stenographers and ten special agents, under the direct supervision of the Deputy Commissioner of Police.

Owing to the fact that this was a new Wing of the Criminal Investigation Branch, certain difficulties were to be expected. The nature of the work demanded that the activities of its members be cloaked in secrecy. Investigations since the inauguration have touched upon the activities of some 20,000 persons.

During these investigations, innocent persons were sometimes reported to be members of subversive and outlawed organizations. In order to spare unnecessary embarrassment, all investigations are carried out in a very discreet manner. One of the chief difficulties encountered in making investigations concerning possible subversive acts has been the great reluctance of the majority of persons reporting such cases to give evidence in court.

The Branch co-operates closely with the several other Police organizations in Toronto and adjacent municipalities, also with the divisional headquarters of the Royal Canadian Mounted Police, the Federal Bureau of Investigation at Washington, D.C., Detroit, Buffalo and Albany. In instances where flagrant violations of the Defence of Canada Regulations have been followed by prosecution and conviction, recommendations have been made urging internment for the violators, which have resulted in internment in a number of cases.

Whilst the danger of direct acts of sabotage to industrial plants engaged in the production of essential war supplies, vital lines of communication, power plants, etc., is ever present, an even more dangerous situation has developed during the past few years. Reference is made here, of course, to the foreign "ism" advocates who, protected by guarantees of freedom of speech, assembly and the press under our democratic system, seek to overthrow that system. By means of "boring from within" tactics they have succeeded in working their way into various legitimate organizations and endeavour to control the policies of such organizations.

The following associations, societies, organizations, etc., have been declared to be illegal since the outbreak of war, viz.:—

The Auslands Organization of the National Sozialistische Deutsche Arbeiterpartei;

The Deutsche Arbeitsfront;

The Canadian Society for German Culture (Deutscher Bund Fur Kanada);

The National Unity Party;

The Canadian Union of Fascists;

The Communist Party of Canada;

The Young Communist League of Canada;
The Canadian Labour Defence League;
The League for Peace and Democracy;
The Ukrainian Labour Farmer Temple Association;
The Finnish Organization of Canada;
The Russian Workers and Farmers Club;
The Croatian Cultural Association;
The Hungarian Workers Club;
The Polish People's Association;
The Canadian Ukrainian Youth Federation;
Italian Fascio Abroad (Fasci Italiani All'Estero);
O.V.R.A. Opere Volontarie Repressione, Anti-Fascisto (National
Organization for the Repression of Anti-Fascism);
Dopolavoro (After Work Organization);
Associazione Combattenti Italiani (Italian War Veterans'
Association);
O.G.I.E. Organizzazioni Giovanili Degli Italiani All'Estero
(Italian Youth Organization Abroad);
The Italian United Moral Front;
Technocracy Inc.;
Jehovah's Witnesses;
The Workers and Farmers Publishing Association;
The Road Publishing Company;
The Croatian Publishing Company;
The Polish People's Press;
The Serbian Publishing Association;
The Finnish Society of Toronto.

The spreading of Nazi propaganda is still carried on by word of mouth, by hailing any German success, spreading defeatist propaganda, etc.

Fascist organizations have ceased to exist as organizational subverters, although occasional meetings of former members of such organizations are still held.

The National Unity Party has more or less ceased to be an active factor in spreading subversive propaganda, due to the fact that its leaders have almost all been interned.

The Jehovah's Witnesses sect, more recently banned, is still quite active, but rigid enforcement of the regulations is having the desired effect. Huge quantities of literature have been seized and confiscated.

One of the chief "ism" organizations is the Communist Party of Canada, which following the notable case in Ottawa when Harry and Louis BINDER and Arthur Roy SAUNDERS were convicted of distributing sub-

versive literature, was declared an illegal organization. Its leaders are all either interned or in hiding. Although outlawed, the Communist Party still has a large and active underground membership who are attempting to foment labour trouble in industries engaged in the production of war supplies.

Efforts have been made to enhance the protective facilities of manufacturing plants engaged in the production of war materials to make them impervious to attack from without or within. Known agitators are kept under surveillance as much as possible in order to guard against the fomentation of industrial unrest or any attempts to weaken the morale of workers employed in our war industries.

The Communist Party has also attempted in recent months to rouse a spirit of resentment amongst the youth of the country who are called up for their period of military training. Literature has been distributed in the military training camps, colleges and schools, calling on the youth to organize and fight the present system of Government.

Careful examination has been made of a large number of periodical foreign language publications, as well as those published in the English language, for subversive material. Since the outbreak of war a number of publications have been declared illegal and banned. Some of the most important of these publications were, viz.:—

THE CLARION	NORODNA GAZETA
GLOS PRACY	PRAVDA
KANADSKY GUDOK	THE ROAD (DER VAG)
JISKRA	SLOBODNA MISAO

An extensive card index file is maintained which contains the names of all persons suspected of possible subversive activities, members of outlawed organizations, and all persons convicted under the Defence of Canada Regulations or the National Registration Regulations.

WAR EMERGENCY MEASURES

Commencing in April, 1939, a survey was made by members of this Force in collaboration with officials of the Hydro-Electric Power Commission for the purpose of preparing a plan by which adequate protection for vulnerable Hydro-Electric plants and other vital industries would be provided to prevent sabotage or destruction in the event of war.

When it became apparent that war was imminent the plan was put into effect, and on August 28th, 1939, the first guards were appointed.

By arrangement with the National Veterans' Security Committee a number of ex-service men were selected and sworn as Special Constables, prepared for duty when and where required.

The policy adopted was for the headquarters of the Veterans' Committee, Toronto, to communicate with their various representatives throughout the Province to provide the men required; they would then be selected, examined and appointed locally.

This policy worked very satisfactory and there was no complaint of men being sent to other districts from Toronto.

As the plan developed a committee was formed to direct and advise, consisting of members of the Attorney-General's Department, Hydro officials, Veterans' Security Committee and members of this Force.

An agreement was drafted containing the conditions of service which each man employed was required to sign in addition to taking the Oath of Allegiance and Office of Special Constable for the Province of Ontario.

A standard of height and age was set, and all applicants medically examined by officers of the Department of Health. Insurance and accident coverage was arranged, and members of the Regular Force were made responsible for the training and supervision of the men.

This protective Force was designated as the "Veterans' Guard," Ontario Provincial Police, issued with uniforms and armed with 12-gauge "Riot" Type repeating shotguns.

When the guards were posted particular attention was paid to the Niagara Falls area including the Queenston Plant, where barbed wire fences, barricades and other entanglements were erected, in addition to floodlights, sentry boxes and telephone connections.

A standard barbed wire barricade and fence was developed and approved, and photographs and blue prints were supplied to such plants as wished to enclose their premises with protective devices of this type.

After the guarding had been in effect some weeks, a tour of inspections of areas guarded was made and it was found that in many cases the personnel could be decreased which was done wherever recommended by the Attorney-General or Hydro Officials.

District Inspectors were given complete control of all guards in their respective Districts with authority to engage or dismiss as the occasion warranted. Appointments were made on a monthly basis terminable at any time on a week's notice, a guard, however, being instantly dismissed for cause such as misconduct, neglect of duty, absent without leave, etc.

The R.C.M.P. assumed the responsibility for guarding the Niagara Falls area in November, 1939, but these arrangements proved unsatisfactory and the Ontario Provincial Police again took over the guarding on November 20th, 1939.

As a result of repeated representation made by the Government of Ontario regarding the imperative need for a military guard in the Niagara area, the Department of National Defence eventually became responsible for this protection.

The transfer of responsibility to the Department of National Defence commenced June 1st and was completed by August 9th, 1940, thereby releasing a number of guards whose services were dispensed with as the work was taken over.

When guarding was first undertaken, the following properties of the Hydro Power Commission were protected:—

 Cameron Falls Generating Station
 Alexander Generating Station
 Long Lac Transformer Station
 Bare Point Sub-Station
 Virgin Falls Generating Station
 New Toronto Transformer Station

The greatest strength of the "Veterans' Guard" at any one time was seven hundred and thirty-seven (737) at the end of November, 1939.

As other protective measures were adopted such as the erection of barricades, flood lights, etc., it became possible to reduce the number of guards. This was done gradually until by the end of April, 1940, the strength was reduced to three hundred and fifty-seven (357).

After the Department of National Defence assumed the guarding of the Niagara area, further considerable reductions were made and at present the "Veteran Guard" numbers only one hundred and twenty-four (124), distributed as follows:—

Essex Transformer Station	Chat's Falls Generating Station
St. Clair Transformer Station	Abitibi Canyon Generating Station
Abitibi Dam	Beach Road Transformer Station
Hamilton Transformer Station	Coniston Generating Station
Gage Avenue Transformer Station	Stinson Generating Station
Whanapitae Dam	Leaside Transformer Station
Bridgeman Transformer Station	Virgin Falls Generating Station
Strachan Transformer Station	Alexander Generating Station
New Toronto Transformer Station	Cameron Falls Generating Station
Oshawa No. 1 Transformer Station	Oshawa No. 2 Transformer Station

Provincial Special Constables on Reserve:

Shortly after war was declared a portion of the Reserve Force of Constables which had been in existence since April, 1937, was called up.

A Training School in charge of Headquarters Officers was opened at 86 Queen's Park Crescent.

The school was fully equipped and a mobile squad under a Sergeant was continuously training and available for emergency duty at all times. This school was discontinued at the end of February, 1940, and the men in training distributed among the Districts throughout the Province.

A number of additional Special Constables were added to the Reserve from time to time to take care of the many extra duties thrust upon the Department by reason of war measures and defence preparedness.

Formation of the Volunteer Civil Guard—an Auxiliary to the Ontario Provincial Police:

The Volunteer Civil Guard was organized in June, 1940, when a memorandum was sent to all municipalities to the effect that the Province of Ontario acting through the Ontario Provincial Police, under the direction of the Attorney-General, was prepared to advise and co-operate with any municipality in the Province desirous of organizing a Volunteer Civil Guard.

This memorandum was the result of many requests made to the Attorney-General by heads of municipalities for guidance in the formation of civil guards.

The number of these groups and the requests for Provincial co-operation increased rapidly.

It was soon realized that these guards were of great moral value and importance in combating subversive and disloyal activities and in the maintenance of law and order, should an emergency arise requiring their services.

At the end of December, 1940, there have been organized 200 civil guard units, with a membership of over 40,000. Many of the officers of these units, at considerable personal sacrifice, have devoted their time, money and talents to the organization and training of their respective units.

While we have not, so far, suffered from any serious sabotage activities, it is believed that the civil guards have had a very salutary effect upon disloyal elements. With the existence and strength of such organization visibly demonstrated in practically every important centre in Ontario, they have made the public conscious of the fact that the citizens are ready, willing and even anxious to deal with any attempted hostile action.

During the past seven months inspections of civil guard units have been carried out by the Attorney-General and Senior Officers of the Ontario Provincial Police in every part of the Province. At these inspections, a blue arm band, lettered in red with the words "Volunteer Civil Guard", and supplied by the Province, was presented to each and every member of the Guard.

At some of the inspections the rank and file turned out in uniforms purchased by themselves and in many instances the units provided their own bands.

Every unit of the Guard has a Commander, assisted by other officers known as Company Commanders. The Commanding Officer of each unit has been

sworn in as an honorary member of the Reserve Force of the Ontario Provincial Police.

A syllabus of training has been prepared and distributed to all units, which syllabus covers the objects of the organization, the legal authority, control, equipment, discipline and the various subjects suggested for instruction and training.

The syllabus explains in detail the powers of arrest by private citizens and the additional powers of arrest by a constable, also what amount of force might be used in making arrests, and a copy has been sent to every Commanding Officer of a unit.

THE ONTARIO VOLUNTEER CONSTABULARY

There has been established, as an auxiliary to the Ontario Provincial Police, a voluntary organization known as the "Ontario Volunteer Constabulary".

This organization comprises suitable persons who desire to render service to the Province without pay and who purchase their own uniform and equipment.

The uniform to be worn by the members of the Constabulary with the necessary insignia and rank badges has been officially approved and adopted, and its officers are armed with service revolvers.

The proposed and authorized strength of the Constabulary shall not be over one thousand.

Its objects are to provide a highly trained and disciplined body of men available for the maintenance of law and order, and preservation of internal security, and generally assist the Ontario Provincial Police or other law enforcement bodies if and when they are called upon to do so.

In addition to general extensive police training, this volunteer organization has perfected a Mobile Column for service under the Civilian Defence Committee (A.R.P.) scheme, and is prepared to assist municipal authorities under this scheme in the event of emergencies arising.

REPORT RE FORMATION OF ONTARIO VOLUNTEER CONSTABULARY

SIR:

In accordance with your instructions, I beg to present a brief résumé of the progress made in organizing the Ontario Volunteer Constabulary. The encouragement our Organization has received has been most heartening, and I am confident that we shall reach our proposed strength of one thousand men early in the Summer.

Since the founding of the Ontario Volunteer Constabulary in September, 1940, two hundred and forty-nine recruits have been accepted and placed on strength. An additional fifty men are in the process of enlistment into the various Units throughout the Province.

As stipulated by the Commissioner of Police for Ontario, Ontario Volunteer Constabulary Districts shall be organized to coincide with the twelve established Police Districts of the Ontario Provincial Police. To date, five Districts have been organized and District Headquarters established.

Provincial Headquarters have been established at Toronto and office space supplied to accommodate Orderly Room, Records' Office and Quartermaster's Department.

No. 5 District (Toronto)—Total sworn in strength to date, one hundred and fourteen men. Drill Quarters, Lecture Hall and Orderly Room located in the Parliament Buildings. This Unit is undergoing training in Foot Drill, Musketry Drill, Range Practice and St. John Ambulance Course. A Mobile Column has been organized, and efficiency in the work is rapidly being achieved. Several other centres are in the process of organization within this District.

No. 3 District (Hamilton)—Present strength thirty-nine men all ranks. Orderly Room for this District is located in the Harbour Master's Building. Lecture Hall has been secured, and permanent Drill Quarters are being arranged for. A section of the Mobile Column has been established, and in addition to this work, the Unit is undergoing training in Foot Drill, Musketry, Range Practice, St. John Ambulance and Signalling Courses.

No. 10 District (Haileybury, Timmins)—District Headquarters for Northern Ontario have been established at Timmins. The Timmins' Company has a present strength of fifty-three all ranks. Units are in process of organization at Sudbury, North Bay and Cochrane. The Timmins' Unit have been training extensively in Foot Drill, Musketry, Range Practice, St. John Ambulance Courses, and are, at the present time, receiving a course of lectures on Riot Control. A number of additional applicants will be sworn in within the next few weeks in this District.

No. 8 District (Belleville)—The present strength, twenty-four all ranks with applications being received regularly. Orderly Room, Drill Quarters and Lecture Hall are located in the Belleville Collegiate. A branch of the Mobile Column has been established in Belleville, regular training in this branch being carried out. In addition this Unit is undergoing training in Foot Drill, Range Practice and St. John Ambulance Courses.

No. 6 District (Kitchener)—Present strength, seventeen all ranks with additional applications being considered. This is a new Unit and have received little training.

In addition to the foregoing, Units are in the process of organization in London, Niagara Falls and Windsor. This should be within the next six weeks, at which time a complete report will be forwarded to your Office.

May I, at this time, tender the thanks of the entire Corps to the Officers of the Provincial Police for their untiring efforts in assisting us in our organization and instruction.

I have the honour to be Sir,

Your obedient servant,

(Sgd.) A. Q. C. O'BRIEN,
Superintendent.

MILITARY AID TO CIVIL POWERS

In view of the possibility that it may be necessary to invoke the assistance of the Militia to aid the civil powers in the present emergency, an Order-in-Council was passed by His Excellency the Governor-General in Council on the 7th day of August, 1940, whereby certain Provincial officials may be designated by the Attorney-General to requisition for such aid, as set forth in the following memorandum:

MEMORANDUM RE REQUISITIONING THE SERVICES OF THE ACTIVE MILITIA IN AID OF THE CIVIL POWER

1. By an Order of His Excellency the Governor-General in Council, passed on the 7th day of August, 1940, provision is made for requisitioning the active Militia in aid of the Civil Power by certain Provincial officials who may be designated by the Attorney-General, and for Senior Police officials functioning in place of Magistrates upon the arrival of the Militia in the locality where required.

2. Pursuant to the said Order the Attorney-General for Ontario has authorized certain Provincial officials to exercise the power of requisitioning the Militia.

3. In no case should the Militia be requisitioned unless circumstances and conditions are exceptional and emergent. Before requisitioning the Militia an official should make careful and exhaustive enquiry and should be satisfied that such action is necessary to protect life and property and that all available police and civil organizations are unable to meet or control the situation. The calling of the Militia is an extraordinary measure which should only be considered in grave emergencies as it involves an impairment of civil jurisdiction and may entail considerable expense to the Province.

4. All officials authorized to requisition the Militia, other than Headquarters officials, will have regard at all times for the following:—

- (a) Where circumstances and time permit they should communicate with (telephone or telegraph) and obtain the approval of the Attorney-General, the Deputy Attorney-General, the Commissioner, the Deputy Commissioner, or the Senior Staff Inspector, in that order of availability.

- (b) Crown Attorneys should communicate with and obtain the approval of the nearest District Inspector or other officer in charge of the nearest District Headquarters, Ontario Provincial Police, if circumstances and time do not permit of contact with and approval from Headquarters as per paragraph (a).
- (c) District Inspectors should communicate with and get the approval of the Crown Attorney of the County or District in which the Militia is required, if circumstances and time do not permit of contact with and approval from Headquarters as per paragraph (a).

5. Any official requisitioning the Militia must report fully and immediately to the Attorney-General.

6. If the locality where the Militia is required is a City or Town with a population of not less than 10,000 so that there may be present more than one senior police officer as defined by Section 5 of the Order, and if the Attorney-General has not designated and is not available to designate a senior police officer to function, Provincial Police officers should communicate with and obtain instructions from the Commissioner, the Deputy Commissioner or Chief of Staff of the Ontario Provincial Police or the Deputy Attorney-General or a senior Officer at Ontario Provincial Police Headquarters and be governed accordingly.

(Sgd.) G. D. CONANT,

Attorney-General for Ontario.

Toronto, August 23rd, 1940.

In addition to the Honourable the Attorney-General and the Deputy Attorney-General, the following officials are designated to requisition such services: All Crown Attorneys in the Province of Ontario, the Commissioner, the Deputy-Commissioner, the Senior Staff Inspector and all District Inspectors of the Ontario Provincial Police.

REGISTRATION OF FIREARMS AND PERMITS FOR OFFENSIVE WEAPONS

Under the provisions of the Criminal Code, before any person can sell, buy, give or lend any revolver, pistol or other concealable weapon, they must first obtain a permit to do so. The Criminal Code also makes it an offence for anyone to carry, either on the person (outside of their own premises) or in a vehicle under their control, or in which they are a passenger, a revolver or pistol or other concealed firearm.

Since the amendment to the Criminal Code in this connection, effective July 15th, 1933, all such permits in Ontario are issued from my office, and a separate branch under a Staff Inspector is maintained at General Headquarters to take care of this work.

During the calendar year 1940, 993 new individual permits to carry revolvers or pistols were issued in addition to many hundreds which were renewed. All such permits are only valid for the calendar year in which issued. Many permits issued are to members of regularly organized and approved shooting clubs in order that they may carry their weapons to and from the ranges of their respective clubs. Many more are issued to bank employees for the protection of bank funds.

One thousand three hundred and eighty-two individual permits for the transfer of revolvers and pistols and twenty Vender's Permits to recognized dealers were issued during the year.

Permits referred to above are not issued automatically upon application but only after investigation, and in accordance with the provisions of the Code, in which the reasons for such permits are definitely outlined.

Under the provisions of the Code any person who is not a British Subject cannot possess firearms of any description or ammunition therefor, without a permit, and between January 1st, 1940, and June 15th, 1940, ninety-three such permits were issued.

Under an amendment to the Defence of Canada Regulations in June, 1940, this section of the Code was superseded by a provision prohibiting the possession of firearms, ammunition and explosives by aliens and requiring that any such persons having firearms, ammunition or explosives in their possession were required to deliver them up to the nearest police officer or justice of the peace. The Commissioner, Royal Canadian Mounted Police could, however, in his discretion, issue permits to resident or non-resident aliens to possess firearms, etc.

Under an amendment to the Criminal Code, effective January 1st, 1935, all revolvers and pistols in the possession of any person in Canada were *required to be registered* and later an amendment required *re-registration* between *March 1st and July 1st, 1939, and every five years thereafter*. Where change of ownership of any such weapon occurs, immediate re-registration must be made by the new owner. While registration may be made with the Chief Constable of any city, town or village in Ontario, all blank registration certificates are distributed from this General Headquarters and general supervision is maintained from here.

This registration of revolvers and pistols and the issuing of permits for the transfer, carrying, etc., of such weapons has been of considerable advantage to this Force, and through us to other police forces, in the tracing and recovering of stolen weapons, also in the solution of crimes in which a stolen weapon figured.

On July 29th, 1940, an amendment was made to the Defence of Canada Regulations which required that all persons having rifles and shotguns in their possession in Canada must register them before September 15th, 1940. It was found physically impossible to complete registration by this date and it was subsequently extended to September 30th, 1940. In Ontario the Registration was authorized to be performed by the following persons:

1. The Chief Constable, the Chief of Police, or head or acting head of the Police Force of every City or Town in Ontario.
2. The Clerk of every township and village in Ontario (except the villages and townships hereinafter named).
3. The High County Constables of the Counties of York and Lanark.
4. The Chief Constables of the Townships of York, East York, North York, Etobicoke, Scarborough, Teck and Tisdale.
5. The Chief Constables of the Village of Forest Hill, Long Branch, Swansea, Humberstone, Delhi and Fergus.
6. All members of the Regular Force of the Ontario Provincial Police stationed at any detachment in any of the following areas: The unorganized districts of Muskoka, Parry Sound, Temiskaming, Cochrane, Nipissing, Algoma, Sudbury, Manitoulin Island, Kenora, Rainy River, Thunder Bay, Patricia, and the Counties of Haliburton and Renfrew.

Blank books of registration certificates were forwarded by the Commissioner, R.C.M.P., Ottawa, to this office, and were distributed by the Staff Inspector

in charge of the issuing of weapon permits who was also authorized to supervise and advise the various registering officers.

In this connection about 8,000 books of registration certificates (each book containing 50 triplicate certificates) were distributed, in all about 400,000 certificates.

The registration certificates are printed in triplicate, the original is given to the person registering the weapon, the duplicate is retained by the registering officer and the triplicate sent to the Commissioner, R.C.M.P., Ottawa. It is not known here just how many rifles and shotguns were registered in Ontario as complete records are kept at Ottawa.

The registering of these weapons was done by the various officials mentioned above on an entirely voluntary basis and they did an excellent piece of work and are to be commended for the part they played in this necessary war effort.

Further, in connection with rifles and shotguns, the Defence of Canada Regulations as amended July 29th, 1940, also required that before purchase, sale or transfer of possession of such weapons be made, a Permit must be obtained. This work was done by the District Inspectors and members of this Force in unorganized Districts and the Chief Constables in the larger cities and metropolitan townships. The forms of Permit were supplied by the Ontario Government and were distributed from this office. We have already distributed 30,000 individual permits and several thousand vender's (merchant) permits.

EXPLOSIVES

On July 4th, 1940, an Order-in-Council was passed under the provisions of the Explosives Act, restricting the sale and possession of explosives and a permit is now required to buy or possess explosives. This does not include ammunition. Prior to this, hardware stores could sell explosives without permit, but now they cannot keep explosives at all unless they have a magazine license.

Permits to buy and keep explosives may now be issued by any member of the R.C.M.P. or Provincial Police, an Inspector of Mines of a Province or the Chief of Police of a municipality wherein the explosive is to be used. This again increases our work both in the issuing of permits and the checking, etc., of the proper guarding of such explosives.

The amount of work involved at this General Headquarters in the issuing of permits, supervision and correspondence in connection with firearms and explosives is very heavy and fully occupies the time of one of my Staff Inspectors and an assisting staff. To give some idea of this there were 8,488 letters written from here in connection with this work during the year, an increase of 2,400 over 1939.

INDUSTRIAL UNREST

Automobile Industry—Windsor:

Owing to reports received that strike trouble was imminent at the Chrysler Plant, Windsor, one Sergeant and twenty additional Provincial Constables were attached to Windsor District Headquarters, October 26th to 31st, when they returned to their respective stations.

On November 8th, thirty Provincial Constables and one Sergeant were again dispatched to Windsor District Headquarters owing to threatened trouble from the same source.

On November 13th, forty-six members of the C.I.O.-U.A.W. were arrested by members of this Force and the Windsor City Police under the Defence of Canada Regulations, to wit:

“Loitering in the vicinity of an Essential Industry.”

All forty-six were convicted before the magistrate, the conviction being upheld by the Court of Appeal.

Members of the Force doing special duty were returned to their posts by December 4th.

Transport Workers Strike:

On November 11th, 1940, a walkout took place affecting a section of the truck drivers and freight handlers of the Direct Winters and Martin Transport Companies, with headquarters at Toronto, involving approximately seventy-five to one hundred employees of the two companies.

Owing to threats being made to sabotage the trucks and contents whilst en route to their destinations, the companies concerned applied to this department and the City of Toronto Police Department for protection.

A convoy system was put into effect whereby a number of trucks proceeding in the same direction would form a convoy with a motorcycle patrol escort. This system worked very satisfactorily and with few exceptions there was no interference.

A number of incidents were reported where strike pickets in automobiles endeavoured to force the transport drivers into the ditch.

Four men were arrested and convicted at St. Catharines for intimidation and offences under The Highway Traffic Act for trying to force a truck into the ditch which had a restraining effect and the strike died out soon after.

The Canadian Seamen's Union Strike:

Early in April a strike largely engineered by “Pat” Sullivan, President, was called by the Canadian Seamen's Union.

This strike was an attempt to tie up all shipping from Port Arthur, Ontario, to Halifax, N.S., affecting 6,500 seamen and 285 vessels.

Owing to threats of violence and importation of strong arm squads from other Provinces to prevent crews from operating vessels, a number of requests were received from heads of municipalities for assistance from the Force.

In compliance with such requests and with the approval of the Attorney-General, members of this Force were sent to the aid of the municipalities concerned as hereunder—

Prescott Grain Elevators:

On April 13th, 1940, one Staff Inspector, one Inspector, C.I.B., one Sergeant and twenty-five Provincial Constables were sent to Prescott owing to information

received that violence would break out on the vessels tied up at that point from "strong arm" crews coming in from Montreal.

There was no disorder at this point and the men returned to their posts on the 15th instant.

On April 20th, at the request of the Reeve of Edwardsburg Township, one Sergeant and eight Provincial Constables were again sent to Prescott on special duty to prevent threatened violence regarding movement of vessels.

Point Edward, Ontario:

On April 18th, 1940, at the request of the Reeve of Point Edward, Ontario, one District Inspector, one Sergeant, and twenty Provincial Constables were sent for special duty to assist the Municipal Police in dealing with the strike of the members of the Canadian Seamen's Union.

During the evening of this date there was a sharp clash between the strikers and Police when the pickets attempted to prevent crews from reaching the docks.

Some injuries were received and a ship's Captain attempting to reach his vessel received a cut face. As a result two men were arrested and charged with assault and resisting the Police. Both were convicted and sentenced to thirty days' imprisonment and there was no further serious trouble.

On April 20th, at the request of the Reeve, the men were returned to their respective Districts.

Port Colborne, Ontario:

On April 18th, 1940, at the request of the Mayor of Port Colborne, one Sergeant and eight Provincial Constables were sent to Port Colborne to aid the Municipal Police in maintaining law and order in the event of violent outbreaks due to the strike.

At the request of the Mayor, on April 21st the men were returned to their posts.

Goderich, Ontario:

On April 20th, 1940, at the request of the Mayor of Goderich, one Sergeant and six Provincial Constables were sent to Goderich to assist the Municipal Police to maintain order in the event of violence due to the strike.

The men were withdrawn on request of the Mayor the following day.

Midland, Ontario:

On April 20th, 1940, at the request of the Mayor of Midland, one Sergeant and six Provincial Constables were sent to Midland to assist the Municipal Police to maintain law and order in the event of violence arising by reason of the strike.

The men were withdrawn the following day at the request of the Mayor.

Port Arthur and Fort William, Ontario:

Approximately four hundred members of the Union, affecting fifteen vessels and docks, went on strike at the head of the Lakes.

The services of the members of this Force were available to assist the Municipal Forces, but fortunately there was no disorder and our services were not required.

This strike, which was declared illegal by the Department of Labour, Ottawa, was no doubt called in an attempt to tie up all war supplies being shipped by inland waters, and could have had disastrous effects if it had not been dealt with firmly.

MURDERS

Provincial Constable D. C. Shervill, Wentworth County.

The above named officer was attached to Hamilton District and on the night of February 8th, 1938, was making a patrol of Orchard Beach, six miles east of the City when he was shot by some unknown person.

The officer lived some seven days following his injuries and gave the following account of the occurrence.

That he had driven to the beach alone shortly before midnight on the night in question, had parked his car with the lights turned off and proceeded on foot down a lane which led to the cottages.

He was passing one of the cottages when he bumped into a man, and on challenging this man, Shervill was shot in the abdomen.

The assailant made his escape and Shervill was able to walk to his car, drive a half-mile to the highway where he gave the alarm.

An intensive investigation followed and a number of suspects were rounded up with no result until October, 1939, when an inmate of the penitentiary at Kingston, named George Henry King, confessed to the shooting and is now awaiting trial on a charge of murder.

Arnold and Nancy Wellman, Rawdon Township, Hastings County.

The above named couple, both over seventy years of age, were found shot to death on their farm on the morning of February 1st, 1940.

The couple lived alone and it was apparent that the shooting of Arnold Wellman took place as he was about to milk a cow in his barn.

Mrs. Wellman was shot as she lay in her bed, a shotgun being the weapon used.

After eliminating considerable possible factors, our attention concentrated upon a neighbour, Fred Thain, and he was eventually arrested and charged with the double murder.

He was found guilty at the Belleville Assizes in the month of October, 1940, and sentenced to hang on January 14th, 1941.

Ambrose Carter, Prospect Hill, Perth County.

At 11.00 p.m., February 29th, 1940, as Ambrose Carter, farmer, alighted from his automobile at his home at Prospect Hill, Blanchard Township, County of Perth, he was shot and killed by a discharge from a shotgun.

From investigation it was found that James Crawford, Prospect Hill Store-keeper, had lain in wait for Carter to return home and had discharged both barrels of a shotgun, point blank, at Carter as he got out of his automobile.

After the shooting Crawford walked home to his store where he was later arrested and charged with murder.

Jealousy of Carter's attention to Crawford's wife was the alleged cause of the shooting.

At the trial held before Mr. Justice Makins at Stratford, Crawford was found guilty of manslaughter and sentenced to fifteen years in Kingston Penitentiary.

Wm. Hayes, Farmer, Clark Township, Durham County.

On March 19th, 1940, William Hayes, farmer, of Clark Township, died from injuries inflicted by Harold Eddy, a farmhand.

Enquiries showed that Eddy (who had previously been an inmate of the Ontario Hospital) had apparently a return of insanity whilst with Hayes and had attacked him with a chair and iron saucepan causing a badly fractured skull.

A charge of murder was prepared against Eddy but he never came to trial having been certified insane and committed to the Ontario Hospital at Whitby.

John and Annie Milroy, Farmers, North Dumfries Township, Waterloo County.

On April 25th, 1940, Reginal White of Hespeler, Waterloo Township, was hanged at Kitchener, for the brutal murder of John and Annie Milroy, aged farmers of North Dumfries Township, on August 28th, 1939, as per sentence pronounced by His Honour Judge J. A. Makins on February 7th, 1940.

William Hunt, Mrs. Elsie Hunt, Mrs. Charlotte Warren, John Hunt and June Hunt, Scottsville, Middlesex County.

On May 17th, 1940, William Hunt, farmer of Scottsville, Middlesex County, shot and killed his wife Elsie, his mother-in-law, Mrs. Charlotte Warren, his son John, and his daughter June, and then committed suicide by shooting himself through the head with the same weapon, a .44 calibre rifle, at their home near Scottsville.

Enquiries showed that Hunt was very much distressed over the loss of some cattle by death, also that he was in considerable financial difficulty.

James Kilpatrick, near Exeter, Huron County.

On June 21st, 1940, James Kilpatrick of near Exeter in Huron County was killed at the home of Samuel Dodge, an Indian living at Exeter. It would seem that both men had been drinking excessively and had quarrelled, resulting in the death of Kilpatrick.

Dodge was arrested on a charge of murder and was committed for trial on September 12th, 1940. He appeared before Mr. Justice Urquhart at the Fall Assizes for the County of Huron on November 7th, 1940. On evidence submitted, Dodge was found not guilty of murder and was acquitted.

Clement Portier, Melick Township, District of Kenora.

On July 9th, 1940, Lucien Portier of Melick Township, District of Kenora, shot and killed his brother Clement Portier at their home in the above-named Township.

Enquiries showed that Lucien and John Portier had quarrelled over a girl and that Lucien had fired three shots from a Winchester rifle at John but did not hit him.

One bullet, however, entered the back of Clement, another brother, causing instant death.

Lucien Portier was arrested and charged with murder.

At his trial before Mr. Justice Kelly, he was convicted of manslaughter and sentenced to twenty years in the penitentiary.

Ethel Matthew, Erindale Pond, Peel County.

On the morning of July 11th, 1940, the remains of the above-named woman were found in the pond at Erindale.

Ethel Matthew, age 24 years, had lived with her husband, Gordon Ross Matthew, age 21 years, on Keele Street, Toronto.

She had been missing from her home since 8.00 p.m. on the 10th of July and her husband, who had worked until about 7.00 p.m. on that date, did not return home until some seven hours later and reported to the police at 4.00 a.m. on the morning of July 11th that his wife was missing.

The husband, who had at first denied seeing his wife on the night in question, finally admitted that he had met her and taken her for a drive and that she had fallen from the car. Being in a panic and afraid that he would be accused of causing his wife bodily injuries, the husband placed the body of his wife in the pond. The medical evidence revealed, however, that the woman's injuries could not have been caused in the manner described by the husband, and he was charged with murder, convicted at the Peel Assizes in November and was sentenced to hang on January 23rd, 1941.

Arthur Phillips, Perth Machine Gun Regiment, Welland County.

At approximately 1.00 a.m., July 14th, 1940, the above named was shot and killed by one William Moulton of the same Regiment. Shooting took place at Queen Victoria Park Military Camp, Niagara Falls, Ontario. Arthur Phillips, age 24 years, a private in the Perth Machine Gun Regiment, died on July 14th, 1940, in the hospital, Niagara Falls, Ontario. The weapon used was an army rifle.

William Moulton was charged with murder and was tried and convicted on September 12th, 1940, and sentenced to hang on November 15th, 1940. On November 14th, 1940, the sentence was commuted to life imprisonment in Kingston Penitentiary.

Fred House, Indian, Six Nations Reserve, Brant County.

On September 20th, 1940, the dead body of Fred House, an Indian of the Six Nations Reserve, was found in a lane on the Reserve at the rear of a house occupied by Leonard Buck, a fellow Indian.

An investigation was carried out by members of the Brantford Detachment of this Force and the Royal Canadian Mounted Police Detachment on the Six Nations Reserve.

Evidence was obtained that Fred House and Leonard Buck had quarrelled on the previous night and that Buck had been heard to say that he was going to kill House.

House had died from a fractured skull, supposedly caused by an automobile crank used by Buck.

Buck was arrested, charged with the murder of House, and on October 5th, 1940, committed for trial by the Magistrate.

Jerry Blackbird, Squirrel Island, Lambton County.

On August 17th, 1940, Jerry Blackbird, Indian, was killed by being struck with an axe in a shack on Squirrel Island in the St. Clair River.

Enquiries made by the members of the Sarnia Detachment were to the effect that Blackbird and a fellow Indian, named Stephen Kiyoshk, had indulged in a drinking bout after returning from the United States and that Kiyoshk had killed Blackbird with an axe.

After the killing Kiyoshk shackled the body of Blackbird to the stern of a rowboat tied to a dock where the Police found it.

Kiyoshk was arrested and charged with murder. His trial took place before Mr. Justice Roach on September 12th to 19th, 1940, at the Assizes Court, Sarnia, when he was found guilty and sentenced to hang November 26th, 1940.

He was granted a stay of execution by the Honourable Mr. Justice Kelly until January 3rd, 1941.

Kiyoshk was a bad Indian who had been previously convicted of murder and sentenced to hang, but the sentence was reversed on being granted a new trial.

ATTEMPTED MURDER

Velma Tanner, Richmond Township, Lennox and Addington Counties.

On April 24th, 1940, Eldon Perkins, Richmond Township, attempted to murder Velma Tanner, age 19 years, at her home in Richmond Township.

Perkins visited Miss Tanner on the evening of the above date, taking with him a .22 calibre rifle. During the evening a dispute arose and Perkins shot Miss Tanner through the breast, the bullet penetrating the lung and coming out by the left shoulder blade.

After the shooting Perkins went to the home of James C. Clarke where he went to bed and during the night shot himself through the head causing instant death.

ROBBERIES AND CRIMES OF VIOLENCE

Robbery—Bank of Toronto, Cardinal, Grenville County.

On November 30th, 1939, the branch of the Bank of Toronto at Cardinal was held up and robbed of \$2,225.00 by two armed men who ordered the Bank Staff and four customers into the vault. When the robbers found they could not fasten the vault, they bound the hands and feet of all seven people and dragged them into the vault, and after obtaining all available cash, escaped in an automobile.

The two robbers were of Jewish or German appearance, and apparently made a clean getaway, but suspicion centered on one Harry Muller, a German, who had resided at Cardinal several years before.

Muller was arrested in Toronto on December 11th, 1939, under the name of Harry Miller, on a charge under the Defence of Canada Regulations and was identified by the Bank Staff as one of the robbers.

On February 23rd, 1940, Harry Muller pleaded guilty before Judge Tudhope of armed robbery and was sentenced to six years in Kingston Penitentiary. The investigation is being continued and some valuable information concerning the second man has been obtained which it is hoped will result in his arrest in the near future.

Robbery—Canadian Bank of Commerce, Baden, Waterloo County.

On the afternoon of January 10th, 1940, the Baden Branch of the Canadian Bank of Commerce was robbed by a lone armed bandit who entered the Bank armed with a revolver and bound the manager, escaping with about \$560.00.

The robber apparently escaped on foot as no automobile was seen in the vicinity at the time of the robbery.

Investigation proved fruitless until February 7th, 1940, when a man giving the name of John Kelly, no fixed abode, was arrested at Cornwall in the possession of currency of large denominations.

He was identified by the manager of the Bank at Baden as the man who had held up the Bank and was returned to Waterloo for trial.

Owing to his peculiar actions at his preliminary hearing he was examined by psychiatrists and found to be insane. He was committed to a mental hospital.

Robbery—Royal Bank of Canada, Winona, Wentworth County.

On August 14th, 1940, at about 3.00 o'clock in the afternoon, the Royal Bank of Canada at Winona, Ontario, Wentworth County, was held up and robbed of \$3,793.93. One man only entered the Bank and did the actual robbery, but it is thought from information secured that another man kept watch in a parked car, the engine of which was running, directly outside the Bank. Shortly after the robbery, the information was telephoned to District Headquarters, Hamilton, and a Sergeant and Constables were immediately sent out to investigate.

The description obtained of the bandits was sent out by telephone to all Police Officials and Constables in the district, also Provincial Police District Headquarters, circling Hamilton to a radius of approximately fifty miles, but the

bandits made good their escape and are still at large, although everything has been done to apprehend them.

Robbery—Edward Martin's Store, Kingsbridge, Huron County.

On November 15th, 1939, an armed hold-up took place at the store of Edward Martin, Kingsbridge, Huron County. Three young men riding in a stolen car held up the proprietor of the small store and service station and, after obtaining gasoline and cigarettes, they made a get-away.

Intensive investigation resulted in the arrest of Alfred Dietrich, St. Clements, Ontario, Lorne Uttley and Donald Boehler, both of Kitchener, Ontario. On January 4th, 1940, Boehler, a juvenile, was sentenced to St. John's Industrial School for a term of not more than two years, and on January 11th, 1940, Alfred Dietrich and Lorne Uttley pleaded guilty of Armed Robbery and Breaking and Entering and were sentenced to three years in Kingston Penitentiary on each charge.

Robbery—Service Station, East of Prescott, Leeds County.

Eugene Larment, Wilfred Byrne, Albert Henderson and Michael Nychai were arrested on April 2nd, 1940, and charged with the hold-up of a Service Station two miles east of Prescott on Number 2 Highway. Larment and Henderson were sentenced to six years, Wilfred Bryne to four years Kingston Penitentiary. Michael Nychai escaped from the County Gaol at Brockville and was later arrested in Oshawa. He was brought back to Brockville on May 6th, and received six years in Kingston Penitentiary with an additional sentence for escaping.

Robbery—Kenneth McKenzie, Culross Township, Bruce County.

As a result of charges laid by the Provincial Police, Walkerton Detachment, against Wilfred Brochu of Montreal, this man was arrested by the Toronto City Police Department on February 9th, 1940. Brochu allegedly stole \$3,150.00 from Kenneth McKenzie of Culross Township in Bruce County in the year 1936. He appeared before Judge C. W. Owens at Walkerton on March 8th, 1940, and was sentenced to serve four years in Kingston Penitentiary on each charge.

With the arrest of Arthur Douglas, John Douglas, Gladys Green and C. E. Vanalistine, all of Owen Sound, Ontario, on November 19th, 1940, a series of house-breaking in Grey County was brought to an abrupt halt. Arthur Douglas and John Douglas (both coloured) received sentences of five years each in Kingston Penitentiary. Gladys Green was given suspended sentence, and the charge against Vanalistine was dismissed.

During the latter part of the summer of 1940, there was a series of Breaking, Entering and Thefts from school houses in Brant, Norfolk, Wentworth, Halton and Haldimand Counties. Members of the Force throughout the adjoining districts worked on this investigation resulting in a very successful conclusion by the arrest of Mrs. Wilfred Crumb and her two daughters, Dorothy, aged 25 years, and Katharine, aged 21 years, at their residence in Paris, Ontario. A search of their premises located hundreds of dollars worth of stolen property of every description. These three women were charged under Section 399 C.C. and on December 13th, 1940, they were all found guilty and each one sentenced to serve a term of one year in jail.

With the arrest of William Montgomery (who used a score of aliases) on February 13th, 1940, one of the most "successful" cheque rackets was brought to a close. This man had been operating over practically all sections of the Province and his victims were, for the most part, hotel proprietors. He was arraigned before Magistrate John R. Blake in Kitchener Police Court on March 1st, 1940. He pleaded guilty to forty-five charges of false pretences, forgery and theft of money. Many of these charges were on Informations forwarded from points outside of Waterloo County. Montgomery was sentenced to serve five years in Kingston Penitentiary.

On April 13th, 1940, Chas. P. McCarthy, ex-Chief Constable, Carleton County, and holder of a private detective license, Ottawa, was arrested on charges of "fabricating evidence". Following extensive investigations into McCarthy's activities in obtaining evidence in certain divorce cases, he appeared before the Magistrate at Ottawa and was committed for trial. On June 11th, 1940, McCarthy appeared for trial before Mr. Justice E. R. E. Chevrier and jury on indictment charges of Perjury, Fabrication of Evidence and Procuring Girls for Immoral Purposes. A verdict of guilty was returned and McCarthy was sentenced to seven years in Kingston Penitentiary.

On information furnished by John Nicholson, Hardware Merchant of Walkerton, Ontario, on November 28th, 1940, that a man giving the name of John West had purchased gunpowder, a file and flashlight from him, an investigation was immediately started into West's actions. He was located at the Hartley House at Walkerton and in his room a large supply of sulphuric and nitric acid, glycerin, sodium carbonate, eye droppers, gunpowder and a file were found. The man's proper name was Edmund Scarr of Owen Sound, and he had recently been released from Kingston Penitentiary. Scarr was charged with having explosives, Section 114 C.C., and on December 6th, 1940, was sentenced to serve six years in Kingston Penitentiary. He was further charged under Section 24 (a) of the National Registration Regulations and under Section 466 C.C. He received sentences of two years and one year respectively, sentences to run concurrently with the Explosive Charge.

Mrs. Beck, age 52 years, of Strathcona Avenue, Westboro, Ontario, was viciously attacked and criminally assaulted on March 31st, 1940. One Lester Arbuckle was arrested by a member of this Force, Ottawa Detachment, and through the very efficient manner in which the investigation was carried out, Arbuckle was convicted and sentenced to ten years in Kingston Penitentiary.

MISSING PERSONS

Earl Donald Kirk and Wife, North Bay, District of Nipissing:

On October 4th, 1940, Earl D. Kirk and his wife left North Bay, Ontario, driving a 1938 Plymouth, heading for points in Manitoba and Saskatchewan.

They were last seen in Sudbury where they had a meal with the representative of the British American Oil Company on the same date. They left Sudbury, supposedly for Sault Ste. Marie, and have not been seen or heard of since. Numerous friends and relatives throughout the west have been interviewed, including Kirk's mother and various women friends, but none have heard of or from him since early in October. It was raining when Kirk left Sudbury, and it is believed probable that the car may have left the road at some bad turn and its

occupants carried into some river or lake. Every effort has been made to try to locate them but as they were not reported missing until November 11th, 1940, it was impossible to drag the various rivers and lakes where they might have gone off the road as at that time the rivers and lakes were frozen over and dragging operations had to be suspended until Spring.

HIGHWAY TRAFFIC ACT

The laws governing and regulating the use and operation of motor vehicle, on the highways are embodied not only in the Highway Traffic and Allied Acts, but also in the Criminal Code, and their enforcement has become one of the most important of all Police duties.

In 1919 the Government of Ontario appointed two officers to patrol the highway between Toronto and Hamilton and as good roads extended, the force of Traffic Officers increased from year to year, operating under the Department of Highways until 1930.

As the use of motor vehicles by the travelling public increased, their use also became common by bank robbers, hold-up men and bandits, who often stole an automobile to make their get-away after committing a crime.

In making plans to deal with this type of lawlessness, it was realized that the Traffic Officers patrolling the highways were the key men in any scheme put into operation, but unfortunately they could not be used to advantage for two primary reasons.

Firstly—They had not full powers of a constable (their powers extending only to the enforcement of the Motor Vehicle or Highway Traffic Act).

Secondly—Being directly under the jurisdiction of the Minister of Highways the Officers of the Provincial Police could not direct their movements.

To correct this evident anomaly, an agreement was reached in March, 1930, between the Department of Highways and the Attorney-General's Department whereby the Traffic Officers were transferred to the Department of the Attorney-General to become a Branch of the Provincial Police with full powers of Provincial Constables, the only stipulation being that the Officers concerned would not be taken from the Provincial Highways for other duties.

After the transfer became effective, the Traffic Officers were known as the Motorcycle Patrol Branch of the Force and functioned under the central control of an Inspector-in-Charge at Headquarters, Toronto.

The Province was divided into Eastern, Central and Western Areas with an Inspector in charge of each Area stationed at London, Toronto and Brockville.

It was the hope and intention that the Traffic Officers would eventually become an active integral part of the Force, but, unfortunately, the system of central control did not prove a success, there being a noticeable lack of supervision and cohesion, and a decided tendency to operate as a separate "Force" instead of functioning as a Branch of the main Force.

This tendency to operate independently was responsible for a noted lack of co-operation between the members of the Regular Force and the Motorcycle Patrol which became injurious to the prestige of the Force and caused unfavourable comment from Crown Officials and the public.

As the result of a survey regarding closer supervision and control, the Honourable the Attorney-General issued instructions that the Motorcycle Patrol cease to function as a separate unit and the supervision and control be assumed by the District Inspectors as from January 1st, 1940, according to the number of Motorcycle Constables doing duty in the District concerned.

The task of absorbing the Motorcycle Patrol by the District Inspectors concerned was expeditiously and efficiently accomplished within a few weeks and the results achieved have more than justified the amalgamation.

At the time of the amalgamation the staff employed in Headquarters Office, Motorcycle Patrol, consisted of:

1 Staff Inspector	1 Area Inspector
1 Provincial Constable	4 Clerks and Stenographers

This office has now been abolished and the Staff Inspector and Clerical Staff transferred to other duties or Departments.

The rank of Area Inspector was also abolished and the three Area Inspectors demoted to Patrol Sergeants.

At the end of 1940 the strength of the Motorcycle Patrol consisted of 121, all ranks, patrolling 4,450 miles of highways in Southern Ontario, approximately 36.7 miles per man, and the number of motor vehicles licensed and in operation in the Province were as follows:

Passenger Vehicles.....	610,576
Buses.....	1,058
Two-Purpose Vehicles.....	1,855
Commercial Vehicles.....	84,980
Trailers.....	44,650
Motorcycles.....	5,403

In addition to the highways patrolled in Southern Ontario, the members of the Force in Northern Ontario are responsible for 2,818 miles of highways which have been designated "King's Highways" since 1935.

To give additional protection to lives and property and further improve the supervision of the Motorcycle Patrol, the Honourable the Attorney-General in December, 1940, approved the purchase of five specially equipped automobiles to be used by the Patrol Sergeants in carrying out their duties.

These automobiles are the very latest in Patrol Cars, and are painted a distinctive colour with appropriate lettering on the doors and the front and rear

of the vehicle. They are equipped with "Police Flasher" lights and carry appliances necessary in the event of accidents involving personal injuries, including First Aid Kit, Stretcher and Blankets, Fire Extinguisher, Axe, Signal Flares, Tow Rope, etc.

Mileage patrolled as at December 31st, 1940.....	4,450 miles

LIQUOR CONTROL ACT
PROSECUTIONS

(January 1st to December 31st, 1940)

There were 2,462 prosecutions by the members of this Force under the provisions of the Liquor Control Act throughout the Province of Ontario for the above mentioned period. These comprised 2,208 Convictions, 130 Dismissals and 124 Withdrawals.

Offence	Prosecutions	Convictions	Withdrawals	Dismissals	Fines
Drinking in a Public Place	419	402	11	6	\$ 3,920.00
Drunk in a Public Place	623	601	8	14	5,472.00
Having	271	231	22	18	16,205.00
Having or Consuming in Hotel	1	1	100.00
Illegal Use of Permit	1	1	25.00
Infractions of Liquor Control Board Regulations	352	320	15	17	6,796.00
In Possession of Liquor Without Board's Seal	8	8	120.00
Keeping in Unlawful Place	360	322	22	16	11,320.00
Miscellaneous Offences	106	97	4	5	1,783.75
Permitting Drunkenness in Private Residence	22	20	2	...	430.00
Sale or Keeping for Sale	206	126	37	43	2,130.00
Supplying Liquor to Minors	50	38	4	8	535.00
Unlawful Possession	37	35	1	1	2,345.00
Unlawful Purchase	6	6	150.00
TOTAL	2,462	2,208	124	130	\$51,331.75

CONFISCATED LIQUOR

The following amounts of Spirits, Wine and Beer were seized and confiscated by the presiding Magistrates throughout the Province of Ontario and turned over to the Liquor Control Board.

Spirits	Wine	Beer
390 Gallons	6,050 Gallons	5,775 Gallons

The approximate value amounted to \$7,212.00.

CONFISCATED AUTOMOBILES

Under the provisions contained in The Liquor Control Act, the following automobiles were seized and confiscated by Magistrates throughout the Province and were brought to headquarters, Toronto, where they were sold by auction or otherwise disposed of:

Model of Car or Truck	Sale Price at Auction	Disposition
Oldsmobile Sedan	\$ 47.00	Sold by Auction
Ford Roadster	48.00	" " "
Ford Coach	190.00	" " "
Chevrolet Coach	425.00	Returned to Owner
Pontiac Coach	163.00	Sold by Auction
Ford Coach	190.00	" " "
Plymouth Sedan	45.00	" " "
Chevrolet Sedan	400.00	" " "
Pontiac Sedan	170.00	" " "
Chevrolet Coach	150.00	" " "
Dodge Sedan	650.00	To this Department
Chevrolet Coach	200.00	Sold by Auction
Buick Sedan	125.00	Returned to Owner
Ford Coupe	135.00	Sold by Auction
Ford Roadster	12.00	" " "
Dodge Sedan	1,000.00	To this Department
Chevrolet Coach	380.00	Sold by Auction
Hudson Sedan	102.50	" " "
Ford Coach	160.00	Sold privately
Chevrolet Truck	...	Awaiting Disposal
Ford Roadster	"	"
Ford Coupe	"	"
Oldsmobile Sedan	"	"
TOTAL AMOUNT	\$4,592.50	

REVENUE DERIVED FROM ENFORCEMENT
LIQUOR CONTROL ACT

Fines Collected.....	\$51,331.75
Approximate Value of Liquor Seized.....	7,212.00
Value of Confiscated Automobiles.....	4,592.50
TOTAL.....	\$63,136.25

PERMITS AND PROHIBITORY ORDERS RECEIVED
FOR CANCELLATION

During the year there were 2,523 Liquor Permits and Prohibitory Board Orders for cancellation received from members of the Force, and in each case where the report of the Officer justified the cancellation or a Prohibitory Board Order, these reports were forwarded to the Chief Commissioner of the Liquor Control Board, with a covering letter recommending cancellations, and in practically every case the Permit in question was cancelled or a Board Order was issued as the case may be.

SAMPLES OF LIQUOR FOR ANALYSIS

There were 345 samples of liquor for analysis received from members of this Force and Municipal Police Forces throughout the Province.

The work in connection with these samples is very important. When the samples are received, a record of the seal numbers and other particulars are placed in a record book before the samples are delivered to the Analyst. When they are analyzed, a Certificate of Analysis, showing the strength by volume of absolute alcohol is prepared by the Analyst and is sworn to by the person in charge of Liquor for Analysis. These Certificates are then mailed to the Police Officers from whom the samples were received to be used as conclusive evidence in the Police Courts as to the strength of the liquor seized.

Reports show good results were accomplished in the enforcement of The Liquor Control Act by members of the Force under the direction of their District Inspectors during the past year notwithstanding the continual criticism regarding the non-enforcement of our Liquor Laws.

INVESTIGATIONS (GENERAL)

A total of 61,234 occurrences were reported for investigation during the period under review.

These cover a very wide range and, in addition to matters pertaining to general law enforcement, included requests from foreign Consuls, Police Departments in United States, Australia, and European Countries, also from friends and relatives of missing persons asking for advice and assistance.

STATISTICAL RETURNS

Owing to the Police Year (for the purpose of this Report) being changed from the "Fiscal" to the "Calendar Year," complete comparable statistics are not available.

CLASSIFIED RETURN OF PROSECUTIONS, CONVICTIONS,

CONCLUSION

In conclusion I wish to express my appreciation for the assistance rendered to the Force during the year by the press and radio officials throughout the Province.

I desire to thank the Municipal Police Forces of the Province, especially that of the City of Toronto, the Royal Canadian Mounted Police and Railway Police Forces, also the many public-spirited citizens for their effective assistance and co-operation during the period under review, and also to place on record the valued assistance and advice received from County and District Crown Attorneys and Magistrates in matters pertaining to the duties of the Force.

On behalf of the entire staff of the Force, I can assure you that the same constant loyalty, vigilance and devotion to duty will be maintained in its fullest sense throughout the critical days that lie ahead.

Respectfully submitted,

WILLIAM H. STRINGER

Commissioner of Police for Ontario.

FIFTY-FOURTH ANNUAL REPORT

OF THE

NIAGARA PARKS COMMISSION

TO THE HONOURABLE ALBERT MATTHEWS, LL.D.,
Lieutenant-Governor of the Province of Ontario.

MAY IT PLEASE YOUR HONOUR:

The Niagara Parks Commission begs to submit for the information of the Legislature, the fifty-fourth Annual Report, covering the fiscal year from April 1, 1939 to March 31, 1940.

The membership remains as during the previous year, consisting of Hon. T. B. McQuesten, K.C., Minister of Highways, Toronto, Chairman; Dr. G. B. Snyder, Niagara Falls, Vice-Chairman; Hon. W. L. Houck, B.S., Niagara Falls; A. J. Haines, M.L.A., Jordan; J. C. M. German, K.C., Toronto; Ross Harstone, Hamilton; A. T. Whitaker, Brantford; Donald McGillivray, Port Colborne. C. Ellison Kaunmeyer, Chippawa, is General Manager and Secretary to the Commission.

Your Commission, within the limits of its finances, has continued its programme of preservation, restoration, commemoration, beautification and attraction, as will be detailed in this report, but under greater handicaps than since the trying days of 1914-18, the years of the First Great War. With an outbreak of a new war, though the aggressors were the same as before many plans had to be curtailed and your Commission co-operated with the authorities, Provincial and Dominion, in every possible way. The Commission was particularly hit, financially, through the necessity of having to barricade the main roadway in front of the Park Restaurant and reaching to Table Rock House, which is the largest revenue producer of the Commission's Concessions and a favourite particularly with U. S. Tourists. The Table Rock House remained closed all through the Winter. In the Spring at an expense of some \$10,000 the barricades were changed so as to allow traffic past the Power Houses and to reach Table Rock House, but when Germany invaded Holland and Belgium and carried on total war against France and Britain the old barricades were re-erected, again cutting off traffic from Chippawa and forcing the closure of Table Rock House and the Tunnel under the Falls, it being felt essential that no chances should be taken which might result in the Power Houses being sabotaged and Ontario's power supply for war purposes cut off. Your Commission concurred in the drastic action, feeling that it was essential that Canada's war efforts should not be risked or handicapped when the Empire is at war with an enemy whose avowed intention is to destroy the Empire and all its component parts.

During the war years, therefore, the Commission expects to meet its obligations but to conserve its resources, with especial regard to protection of the vital Hydro-Electric plants which are located within its domains.

THE ROYAL VISIT

On June 7, 1939, the Queen Victoria Park, operated by the Niagara Parks Commission, had the distinguished honour of being visited by Their Gracious Majesties, King George VI and Queen Elizabeth. Arriving at St. Catharines, on the Royal Train, Their Majesties detrained there and motored to Niagara-on-the-Lake, that focal point of the history of Upper Canada, particularly in the years of British occupation prior to and including the War of 1812-14, or Newark, as this delightfully located village was known when it housed the first Parliament of Upper Canada, Fort George (under construction), Fort Missisauga, Navy Hall (also under construction) and the William Lyon Mackenzie reconstructed home and print shop.

Their Majesties then motored via the Niagara Parks Commission River Parkway to Niagara Falls, where the cavalcade made a brief tour of the streets, entering Queen Victoria Park by the Mowat Gate and proceeding to the Administration Building, where they were greeted by Hon. T. B. McQuesten, Chairman of the Commission, who introduced to Their Majesties the members of the Commission and, in the cases applicable, their wives. Within the Administration Building, tea was privately served to Their Majesties, who inscribed their names in a Golden Book prepared for the occasion and now a highly prized memento of the visit, preserved under glass. Their Majesties then proceeded to Table Rock, adjacent to Table Rock House, where they viewed, in private, the majesty of the falling waters of the Great Cataract. Resuming their journey of state, Their Majesties proceeded to the General Brock Hotel, where they were to view the special illumination of the Falls. It was the first visit of Queen Elizabeth to Niagara Falls, but the second for King George who, as a midshipman on H.M.S. Cumberland, had many years before paid Niagara an informal visit.

Your Commission has reason to believe that Their Majesties were entranced by their vision of the Falls, and were highly pleased with the surroundings as observed in Queen Victoria Park, named after the King's Most Gracious Great Grandmother.

With the completion of the restoration of Old Fort Erie in 1938 and its opening in 1939, attention of the Commission was largely centred on Ft. George, situated near the mouth of the Niagara River where it flows into Lake Ontario, and which was built by Governor Simcoe when, after the American Revolution, Fort Niagara, across the river was handed over to the newly constituted United States. As recorded in previous annual reports, then Commissioner Fred Beard, St. Catharines, worked continuously on the securing of authoritative data on old Fort George, with the assistance of the Canadian Militia Department, and it was possible to proceed with reconstruction of the fort with all the original plans available. Work proceeded energetically on the site which is across the highway from the Canadian Militia encampment at Niagara-on-the-Lake, and arrangements are complete for its opening July 1, 1940, beyond the purview of this report.

STORY OF FORT GEORGE

In this connection the following resume of the story of Fort George, prepared by Ronald Way, Historian of the Commission, will be of interest:—

Built shortly before the troubled days of 1812-14 when the United States and Canada were at war, picturesque Fort George at Niagara-on-the-Lake was originally designed to keep Americans off British soil. Today it is being restored by the Niagara Parks Commission as a tourist attraction to help bring American visitors to Canada.

Hon. T. B. McQuesten, K.C., Chairman, greeting Their Majesties in front of the Administration Building

Hon. T. B. McQuesten introducing members of the Commission to Their Majesties

There were three distinct phases in the existence of Fort George. After the first of these phases, and throughout the second and third, the fort was so altered in appearance and design that it is simpler to imagine that two quite different forts occupied the same site at successive periods.

The original fort was constructed by Lt. Governor Simcoe between 1797 and 1799 to replace Fort Niagara which was transferred to the United States after the American Revolution. Fort George was the principal British post on the Niagara frontier until 1813 and occupied a height close to the river bank nearly a mile above the town on Niagara. After a brave resistance by its garrison, it fell to the Americans during the battle of Fort George on May 27, 1813, but before withdrawing, the British garrison set fire to the buildings and blew up the earth works.

Between 1799 and its capture and destruction on May 27, 1813, there were no important alterations in its structure. An official military report of the spring of 1812 describes Fort George as: "An irregular field work, consisting of six small bastions faced with framed timber and plank connected by a loopholed stockade, 12 feet high outside where there was a shallow dry ditch." The solid earth bastions were floored with plank to form platforms for cannon and the parapets pierced with numerous gun embrasures.

There were originally two roads leading into the fort passing approximately through the centres of the north-west and south-east lines of stockade. The ditch was crossed by small wooden bridges and each gateway protected by a triangular outwork known as a redan. At the beginning of the War of 1812, the southeast entrance proved to be an unnecessary source of weakness and was permanently closed.

In 1812 the armament of Fort George consisted of 5 guns; one 12 Pdr. and two 24 Pdr. long guns and two mortars. The three long guns were placed as follows: one of the 24 Pdr. in the north-east bastion, the other 24 Pdr. in the north bastion, and the 12 Pdr. in the west bastion. The two mortars were mounted in the east and south bastions.

Within this first Fort George were five blockhouses which served as defensive barracks for the troops, separate officer's quarters, a guardhouse, storehouses, a kitchen and a powder magazine. There was also a small octagonal blockhouse in the redan on the south-east front. All of the blockhouses were constructed of squared logs, two stories in height and had splinter-proof roofs. The largest of these was about the same size and design as the stone barracks in Fort Niagara, was nine feet higher and considered to command every part of the American Fort. The powder magazine was built of solid masonry with bomb-proof arches. It was enclosed by a thick, high embankment of earth, to protect it from gun-fire.

On the margin of the river and immediately in front of the fort were four clapboarded buildings known as Navy Hall, which had been constructed during the American Revolution to serve as winter quarters for the officers and seamen of the provincial marine on Lake Ontario. Nearby, was a good sized wharf and, at this period, these buildings were utilized for military stores. The largest, frequently referred to as the Red Barracks, is in existence today and has been restored by the Niagara Parks Commission.

Early travellers were favourably impressed with the appearance of the original Fort George. In 1800, John Maude wrote that the situation was pretty, the fort new and remarkably neat, built on the edge of a handsome green or common and skirted with a few tolerable houses. Another traveller, who visited the Fort in 1806 has recorded that it was built of cedar pickets and earth, the buildings on it of much neatness. In 1807, the American, Christian Schultz, was no less pleased.

While the average layman was considerably taken with the appearance and apparent strength of Ft. George, engineer officers had far less confidence in its military effectiveness. Sir George Prevost wrote upon his arrival in Canada, that Fort George was but a temporary field work, incapable of much resistance against an enemy in force. In February 1813, the officer commanding the Royal Engineers in Canada, reported that the fort was in a very ruinous and unfinished state, and might have been better situated for it neither commanded the entrance to the river nor protected the town of Niagara. He recommended that the lines of stockade should be replaced with solid earth ramparts in order to afford adequate protection against gun-fire, that the upper stories of the blockhouse as they were too greatly exposed be taken down, and that the storehouse at Navy Hall be removed from the river bank to prevent their complete destruction in the event of an attack. Within two months, the fall of Fort George to the Americans demonstrated the soundness of this criticism.

As previously mentioned, the original Fort George was almost completely destroyed on May 27, 1813. Portions of the stockades and barracks not annihilated by the enemy's guns, had been fired by the British. Only the solid masses of the bastions and the stone powder magazine remained. In order to strengthen their hold on British territory during their more than six months' occupation of Niagara, the invaders constructed a field work upon the ruins of the British Fort. This was the second Fort George.

The outline of this American Fort is easily traceable before the present restoration work. Enclosing only one half the area of the original Fort George, its five "full" bastions were connected with curtains of solid earth—a more suitable arrangement than the former British stockade. The ditch was deep, and there was a line of picketing on the berm between the escarp and the exterior slope of the parapet. Three long barracks were built by the invaders to house their garrison. They were hastily constructed and only of a temporary nature. Being outside the new

Fort George (restored) Niagara-on-the-Lake

Navy Hall showing new roadway

Fort, the former British powder magazine could not be utilized, and the American magazine was no more than a structure of logs and earth.

The main body of the Americans was encamped between Fort George and the town of Niagara. In addition to reconstructing the Fort, the Americans extended trenches in a straight line from its north-west bastion to St. Mark's Church in Niagara and thence south-east to the river bank. The Fort thus formed the left of an extensive entrenched camp.

So rapid was the British advance of December 10th, 1813 which compelled the American evacuation of Niagara, that while the enemy were able to set fire to the town, they were prevented from seriously damaging Fort George. On December 22nd, Lieutenant-General Drummond advised Sir George Prevost, that as none of the works were materially injured, the Fort could be placed in a respectable state of defense in the Spring without much labour.

During 1814 and 1815, the British constructed within the recaptured Fort two large splinter-proof barracks and a new stone powder magazine. One barrack was 110 feet long, the other 75 feet, and both 25 feet wide. In order that the building might be concealed by the ramparts, they were low with only seven feet of interior head-room and each was divided by brick partitions into four rooms. This second stone powder magazine survived until the beginning of the present century.

No further improvements were made at Fort George. The war of 1812 had made obvious the defects in the position of the Fort and military authorities were now unanimous in their condemnation of the site. In the Spring of 1814, the British had begun the erection of a field work at Mississauga Point, a superior site which completely commanded the mouth of the river. Major-General Robinson wrote to Sir Gordon Drummond in July the following year that:

"Fort George is of no military value as a work of defence although it serves the very useful purpose and also contains a magazine and Ordnance Stores. I beg leave therefore to recommend its being left untouched for the present as it will gradually crumble away and may be destroyed at any time in a few hours by small mines in the salient angles of the Eastions."

The decision of the commander-in-chief was set forth in a letter to Lord Bathurst of August 15th, 1915:

"It has become almost indispensable requisite for the securing of the Harbour and neighboring district of Niagara to enlarge the Fort at Mississauga Point, which at the time of its construction, amidst the greatest difficulties was laid out on a scale, so circumscribed, as nothing but the existing deficiency of means would justify. In consequence, I have given orders that the expense of keeping up old and useless Fort George, already tumbling into ruins be discontinued."

Perhaps the most important decision involved in the restoration of Fort George was the period of its history which the reconstruction of would represent. It was the first Fort George which withstood the American attack in 1812 and within which General Brock was buried. The second Fort as built by the Americans and afterwards occupied by the British was never attacked and had few historical associations for Canadians. For these reasons it was decided that the Fort might best be placed in its original state as built by the orders of Lt.-Governor Simcoe in 1797.

The work of restoration has been in progress since the spring of 1937 under the direction of the Niagara Parks Commission and is expected to be completed by July 1, 1940, when the Fort will be officially opened to the public.

The bastions, stockades and other defenses have all been carefully rebuilt according to the original plans of the Royal Engineers. Eleven of the fourteen original buildings have also been restored. The officer's quarters, some of the soldier's barrack rooms, the guard room, the kitchen and the artificer's shop are being refurnished as they were lived in by the troops of 1797 to 1812.

The Fort will be open from 9.30 a.m. to 9.30 p.m. daily commencing July 1st.

RE-OPENING OF OLD FORT ÉRIE

During the tenure of office of this present Commission, Old Fort Erie, which has been allowed to fall into neglect, its very stones being removed for rock gardens and other uses, has been reconstructed. On July 1, 1939, the Old Fort was officially re-opened.

Garrisoned by soldiers wearing the picturesque uniforms of 1812, and with old guns of that date reconditioned and ready to fire, the Old Fort was in gala attire. Hon. T. B. McQuesten, chairman, and members of the Commission, were present for the occasion. Members of the Frontier Branch, Canadian Legion of Fort Erie, and members of the Buffalo Legion Post met at the International border at the Peace Bridge, and marched to the Fort, headed by a

Old Fort Erie (restored) showing Soldiers Monument

Fort Erie - restored

Highland band. Memorial services were held on the greensward near the Pavilion in the Park. Capt. Rev. Henry Cotton, Chaplain of the Fort Erie Legion, reciting the services for the British dead at the base of the newly located Memorial to the heroic dead, while Lieut.-Col. Rev. Roman Newer, Chaplain, 106th Regiment, New York National Guard, officiated on behalf of the Americans for those who, under the Stars and Stripes, gave up their lives in attacks on and defense of the Fort in the War of 1812. Addresses were delivered by Hon. T. B. McQuesten, Chairman, and Hon. W. L. Houck, of the Niagara Parks Commission, and by Robert W. Bingham, Director of the Buffalo Historical Society, and Mayor George Bown of Fort Erie.

The historically accurate drawbridge over the moat into the Old Fort was then operated, and the party proceeded to the interior of the Fort, one of the ancient guns was fired, and the museum and other parts of the Old Fort thrown open to the public.

A pageant covering the life of the area from the time of the Indians, through the arrival of the French, the British, the pioneers, then the erection and defense and capture of the Fort, was presented evenings on three occasions.

CONSTRUCTION WORK DURING THE YEAR

Your Commission continued the work of improvement, the engineering section being busy. All contracts let during the year were awarded to the lowest tenderer, after public notice had been given. A summary of the work accomplished, as prepared by the Engineering Department, follows:

1. Restoration of Fort George continued.
2. Restoration of Old Customs House near Navy Hall.
3. Asphalt pavement with stone curb from Main Road, south of Fort George to Ricardo Street, north of Navy Hall, Niagara-on-the-Lake.
4. Asphalt pavement with concrete curb and gutter along Queen Street in the village of Queenston from Clarence Street to Bridge over H.E.P.C. tracks.
5. Asphalt pavement with concrete curb and gutter from Queen Street near Mackenzie House along old I.R.C. right-of-way to No. 8A Highway.
6. Stone Steps and pillars between Brock's Cenotaph and No. 8A Highway.
7. Addition to Mackenzie House.
8. Spacious parking area of asphalt and stone curbing in Queenston Heights Park.
9. Commencement of construction of New Restaurant building at Queenston Heights Park.
10. Spacious parking area and improvement to main road in front of Niagara Glen consisting of asphalt, and concrete curb.
11. 1-Room addition to back of Training School, of stone construction to replace small wooden porch for cold storage.
12. Asphalt pavement and stone curb in Queen Victoria Park between Table Rock House and entrance to the C. N. Power Company Parallel to old road. Resurfacing old road and constructing stone curb.
13. Spraying and chips roadway Niagara Falls to Niagara-on-the-Lake.
14. Spraying and chips roadway Fort Erie to Niagara Falls and Queen Victoria Park.
15. Asphalt pavement and concrete curb along Water Street in village of Chippawa.
16. Widening of Frenchman's Creek, Miller's Creek, Baker's Creek and Boyer's Creek bridges and approaches.

View of the Niagara River from Fort George. Fort Niagara (on the American side) in the background

Queenston Restaurant

17. Stone sea wall backed up by concrete retaining wall in Mather Park between Walnut Street and to a point about 3,000 feet southerly along the Lake Shore.

18. Asphalt pavement with stone curb from Walnut Street south to Garrison Road and Peace Bridge Entrance.

19. Traffic circle of asphalt and concrete roll curb together with widening of Lake Shore road from Garrison Road to a point southerly, Fort Erie.

20. Mather Park Gateway constructed at foot of Garrison Road in Mather Park.

21. Asphalt pavement with concrete curb into Fort Erie Park together with Parking area.

22. Alterations to Pavilion and Restaurant in Fort Erie Park together and Stone Entrance Gate.

23. Completion of Restoration of Old Fort Erie including relocation of Soldiers Monument.

LAND PURCHASES IN YEAR

In accordance with its continuous policy of purchasing all abutting properties which came on the market, when a fair price was reached, the Commission during the year made several such purchases.

The major property was that of John D. Larkin, Inc., 32 acres of land in the Township of Niagara, purchased at a cost of \$20,000. Second largest purchase was of the Ferguson property, Fort Erie, on which were located three houses. These were sold and removed. The purchase price was \$12,000, of which the Peace Bridge Authority paid \$2,000 and received \$100.84 back from the sale of the three houses which were removed. The Commission received \$504.16 from the house sale. The third major purchase was International Railway Company property near Queenston Heights Park, originally purchased as a hotel site. The I.R.C. asked \$9,500 for the property, but accepted \$8,000 from the Commission in Canadian Funds. The property consists of 13-6 10 acres.

Other properties purchased during the year were:

Lands situated across parkway from the Whirlpool Rapids Elevator Building, \$1,600.

Two pieces of land, 231 square feet westerly side of River Road, south of Ricardo Street, Niagara-on-the-Lake, Mrs. Harris W. Price, \$1,500.

Water lot from P. E. Garson, at Fort Erie, 561 feet frontage, at \$5 a foot frontage, \$2,850.

Niagara-on-the-Lake, Col. C. C. Kinney property, \$4,000.

Lots 13-18 inclusive, Fort Erie, from Fort Erie Beach Company, Fort Erie, \$3,000. This and the Ferguson purchase give the Commission the complete water line area from the Peace Bridge to Old Fort Erie.

I.R.C. SUIT

The International Railway Company entered suit against the Niagara Parks Commission for \$241,963 in interest on the amount of compensation it

received after the Company gave up operation and ownership of its lines along the Canadian side of the Niagara River in 1932.

Until 1932 the Company, which is incorporated under the laws of New York State, operated the Railway along the Niagara River's west bank from Queenston to Chippawa, under an agreement made on Dec. 1, 1891, with the Parks Commission.

The agreement gave the Company the right to continue operations for forty years and contained provisions for renewal at the end of that period. On Sept. 1st, 1932, when the agreement expired, the company did not renew its Canadian rights, abandoning the line, possession reverted to the Niagara Parks Commission. Three arbitrators were later appointed to decide upon compensation.

In 1935, following arbitration, the compensation was set at \$179,104. An appeal was launched, however, and in 1937 the amount was determined at \$1,057,436 by the Privy Council.

The Commission paid the International Railway Company \$1,057,436 plus interest from 1935 to 1937. The Company claimed interest from 1932 to 1937, less the \$23,783 of interest already paid.

The action was heard by Mr. Justice Kelly in non-jury high court. The company was represented by J. W. Pickup, K.C., and Colonel J. W. G. Thompson, the Commission by Arthur Slaght, K.C., M.P., and R. I. Ferguson, K.C.

The Niagara Parks Commission claimed the agreement contained no provision requiring to pay interest on such compensation, and that it is immune from liability in the action by reason of being an agent of the Crown. It also claimed the International Railway Company was not entitled to interest on the compensation until the amount of compensation was fixed.

The action was dismissed with costs. Reasons for judgment were given by Mr. Justice Kelly.

The Commission was naturally pleased with this ending of the lengthy litigation, which cost the Commission nearly \$1,500,000 in the award, the costs of arbitration, appeal to the Appellate Division of the Supreme Court of Ontario, appeal to the Privy Council, and finally appeal over the Interest. Unfortunately a further appeal has been made to the Privy Council.

ORIGINAL PRESS SECURED

After long negotiations, the Commission purchased, at a cost of \$500.00 from H. J. Pettypiece of the Forest Free Press, the original press of William Lyon Mackenzie, upon which were printed the weekly copies of "The Colonial Advocate", at Newark (Niagara) and later used in Toronto, where it was thrown into the Bay and eventually recovered. It will be set up in the William Lyon Mackenzie home at Queenston.

The Commission authorized its historian, Ronald Way, to secure printing equipment which would likely have been used in the time of William Lyon Mackenzie and "The Colonial Advocate".

In connection with the authenticity of the William Lyon Mackenzie Press, the following letter appeared in the Toronto Globe and Mail.

MACKENZIE'S HISTORIC PRESS

To the Editor of The Globe and Mail:

Recently some doubt has been expressed by your readers as to the authenticity of William Lyon Mackenzie's old hand press which has now gone to a well earned rest provided by the Niagara Parks Commission.

The following information in regard to this Press appeared in a history of Parkhill's newspaper prepared and published in 1909 and may serve to clear up the doubtful points.

"Mr. Wallace Graham in equipping his first plant in the Parkhill Gazette had become the possessor of the old William Lyon Mackenzie Printing Press on which the 'Colonial Advocate' had been printed and which, with the type, the so-called patriots threw into Toronto Bay on June 8, 1826. The Press was recovered and was used again by Mackenzie in the troublous times of 1837-38. In 1872 the Gazette office was located on King Street near the first Powell house which was that year destroyed by fire. The fire spreading did some damage to the Gazette plant and the Mackenzie Press was put so much out of repair that it was sold to the late H. C. Baird of the Eagle Foundry for old iron. Mr. Baird, out of veneration for it, refrained from breaking it up.

"In the early eighties T. Claude Dean published the 'Parkhill Herald' for nearly two years. Being of a mechanical turn of mind, he bought the old Press and with the services of the Eagle Foundry staff had it put into working order once more with a rolling cylinder substituted for the former lever attachments. In the destruction of the Herald plant by fire the old Press was again badly damaged and once again its old irons found their way to the scrap heap of the Eagle Foundry."

Over sixty years ago, Mr. H. J. Pettypiece, Editor of the Forest Free Press, visited this scrap heap and once again rescued the Press, having it repaired into good working order, and I believe with the old lever attachment. Since that time the Press has been, until recently acquired by the Niagara Parks Commission, part of the equipment of the office of the Forest Free Press, and has been in constant use, I am told, as a proof press and for some job work, such as auction sale bills.

The Press was used on a float prepared by one of the Toronto papers (I believe it was the Globe) during the Old Boy's celebration some ten or twelve years ago, through the courtesy of Mr. Pettypiece.

I hope this letter will clear up any doubt as to the authenticity of this Press, and that due credit will be given to "Mr. Pettypiece, veteran publisher, for the preservation of this historical relic."

Mary J. Dawson, Editor.

The Parkhill Gazette.

QUEENSTON RESTAURANT

After many years' service, the Restaurant at Queenston Heights Park, adjacent to the General Brock Memorial, was found to be past all hope of repair. The Commission therefore, called for tenders for a new stone structure, with red tile roof, in keeping with the general lines of the Commissions' architecture throughout the Parks System, which was constructed early this Spring. The old building was so dilapidated as to be entirely out of keeping with the surroundings, which include in addition to the Brock's Monument, the site of Fort Drummond, the Laura Secord Monument and the site of the Battle of Queenston Heights.

The Contract for the new structure, plans for which were carefully gone over by the Commission, and changes suggested, was awarded and completion date set for April 1, 1910.

The old building was located without regard to possible vistas. The new building was erected on the side of the Queenston Escarpment, one story to the south and two stories to the north, where it is possible to get a view of the Lower Niagara River extending to Lake Ontario, one of the most entrancing views which could possibly be obtained, though without the majesty of Niagara Falls as viewed from the Park Restaurant in Queen Victoria Park.

The old building was removed after tenders had been called. Such equipment as was of value under the new conditions was retained and transferred.

APPRENTICE GARDENERS' SCHOOL

The year saw the culmination of the first three-year class at the Apprentice Gardeners' School at the Niagara Glen. A dinner was tendered by the Commission to the graduating class, the members of the intermediate and junior classes, and the parents of the boys. To Mr. James Waters, Hamilton, was awarded the scholarship for the three years, this consisting of a year's stay at Kew Gardens, London, England, and travelling expenses to and from the Empire metropolis. (It is perhaps significant that when offered the opportunity to withdraw from the course, taking instead a cash award, because of the threatening war conditions, Mr. Waters decided to proceed according to the original plans and went over, greatly enjoying the work and the contact at this famous upper school for gardeners. No students are admitted, it should be noted, unless they have formerly served as apprenticeships or served in horticulture actively.)

At the graduation dinner, members of the Commission spoke briefly, and expressed their satisfaction that the classes had proven so successful. Tribute was paid to the instructors of the class, who were also guests of the Commission for the ceremonies. Diplomas were presented to each of the seven graduates.

L. G. Riley, the exchange student sent by Kew Gardens under the scholarship arrangement, has fitted in splendidly with the other youths constituting the classes.

Placement of five of the seven graduates on the Commission staff was made as follows:

Ray Halward, propagator at the Training School.
 Alfred Pain, sub-foreman, greenhouse.
 Hugh McCracken, foreman, Mather Park.
 William Holmes, sub-foreman, Queen Victoria Park.
 Jack Martin, treeman.

SCHOOL ACTIVITIES IN YEAR

The year's activities at the School are reviewed in a report by Mr. K. M. Broman, Superintendent of Arboriculture, as presented to the Commission as follows:—

"I beg to submit a report of the Training School for Apprentice Gardeners from December 1, 1938 to November 30, 1939.

During the Winter of 1938 and 1939 our lecture and work schedule arranged for the term worked splendidly. We were able to teach the students the theory behind the work they do. They also spent 3,928 hours learning the practical side of tree-surgery and the culture of annuals and perennials in the Park Greenhouse and Queen Victoria Park. When the weather permitted they enjoyed recreation on their ice-rink behind the garage and this sport tended to bring them into closer fellowship.

Early in April we planted vegetable seeds in the cold frames in order to have an early and good supply of vegetables for the Restaurants. In May we transplanted these vegetables, including cabbage, cauliflower, melons, squash, etc., to our kitchen garden in the northern section of the School Grounds. Carrots, turnips, beets, broccoli, Kale, Brussel Sprouts, parsley, rhubarb, corn, peas, in short everything there is a market for, were planted in the open ground in May and we had a very good yield of these crops.

After the lectures were over, toward the middle of April, the apprentices spent a week learning the methods in which to make cuttings of various trees and shrubs. They were very keenly interested in this work and they had very excellent results in the percentage of cuttings taking root.

Toward the end of April, when the weather conditions were suitable and the soil was not too wet and sticky, we started our spring planting of trees and shrubs. We planted approximately seventy-five different species and varieties of roses, and fifteen different kinds of lilacs and spirea in a border along the Parkway in the north of the School Gates. In addition to this we planted hundreds of evergreens, one hundred hawthorns, three hundred poplar trees and about the same number of pyramidal maples in the vicinity of the Whirlpool. Two hundred and fifty Amelanchier

the Shad-bush or Service-Berry, were planted nearby, and when their leaves turn to bright hues in the fall they will be a sight well worth seeing.

Five hundred trees and shrubs were sent from the Nursery to be planted behind the Administration Building and on the island of the naturalistic pond in Queen Victoria Park. In our Nursery rows at the School we set out thousands of seedlings or cuttings of forsythia, snow-berry, willow, roses, etc., which we had germinated or produced in our cold frames. Four thousand and fifty black walnut trees, grown from seed in 1938, were taken down to Niagara-on-the-Lake to be planted near the 14,000 pin oaks, 1,800 Norway Maples and 7,100 scarlet oak which were planted in our sub-nursery down there in the Spring of 1938. Two hundred and seventy shrubs of different sorts (including Taxus) were sent to Oakes Garden Theatre in the spring and one hundred and thirty Pean-Trees were taken down to Mather Park this fall. In addition to this we had two students go down to the Military Camp, Niagara-on-the-Lake, and assist in planting a hedge consisting of seven hundred Caragana arborescens, the shrubs being removed from our Nursery rows. The Coronation Oak are growing very well.

Raspberry plants, donated by Mr. Broman, were set out in the vegetable garden this year occupying an area of four thousand and eighty square yards of land, and strawberry plants taking up an area of three thousand four hundred square yards, and also rhubarb occupying two thousand square yards of land.

The Flag-Pole for the school arrived Tuesday, May 16, and was put in place May 26, 1939. We were very pleased to be able to fly the Union Jack the day the King and Queen drove by the School, Wednesday, June 7, at 6.30 p.m. Many people again remarked about the beauty and splendor of our Iris borders along the edge of the Parkway and their blooms were at their best when the King and Queen came by.

Our Peony collection planted in the Fall of 1937 and consisting of over three hundred and thirty varieties bloomed for the first time this year and they attracted many tourists. Also, our two hundred varieties of Phlox bloomed very well throughout the summer months even though we had quite a dry summer this year. The collection of hybrid tea roses and the various sorts of lilies were praised by visitors driving into the School to look around.

Quite a historical event took place at the Training School, Friday, July 14th, 1939, when the first class of apprentice gardeners to come to the School (July, 1936) were graduated on that date. All the Apprentices at the School, the Staff, and the parents of the Graduating Class attended a banquet given by the Commissioners in honour of the graduates and at which the diplomas and scholarships were awarded to them. James E. Waters from Hamilton, received the Scholarship to go to Kew Gardens in England and study for one year. He sailed July 21, and is enjoying the work and experience at Kew very much.

Leonard G. Riley, the exchange student from the Royal Botanical Gardens, Kew, England, arrived at the School, Saturday, July 29, 1939, and we are greatly pleased with his active interest in the work at the School.

After July 14, we had only eighteen students at the School. We sent the students, alternating them, up to work at Oakes Garden Theatre, Queen Victoria Park, or the Greenhouses. In August and September the apprentices were sent down to work at Fort George and they carried on excellent work in grading and making preparations for landscape work to be done there.

During the latter half of July and August the apprentices were busy weeding the nursery stock, pruning, and doing general maintenance work at the School, besides making many improvements in the grounds around the Lecture Hall and Residence.

Mr. Hamilton, our Botany Teacher, was able to give each of the students practical work in botany during the summer months. He took one student with him each day to assist him in collecting specimens of the wild plants found in various sections of the Niagara Parks Commission's properties. The students were taught how to identify plants unknown to them at first, and they took a great deal of interest in this work.

We are quite pleased to report the excellent work of Hugh McCracken, one of our graduate students, who came from Brantford. He is the foreman at Mather Park, Fort Erie, and has proven himself very reliable. Ray Halward, Alfred Pain, William Holmes and Jack Martin, all graduates of this year, are doing excellent work in the various jobs in which they are employed in the Parks System.

Thursday, August 31, 1939, eighteen apprentice-gardeners were taken to the Canadian National Exhibition, in Toronto, and they spent a very profitable day there.

During the latter part of July, August and September we had the students make many thousands of phlox, purple-leaved plum, red-leaved hollyhock, and conifer or evergreen cuttings, and these were placed in the cold frames. This type of work is very valuable to the students and next spring we should have hundreds of these plants to grow and take care of, for future planting throughout our Parks System.

Norton Weaver, a Second Year Apprentice, left the School September 5, 1939, to help his father at home on the farm.

In October and November great quantities of seed were collected from the shrubs and trees in the nursery rows and the country side, and this seed was stratified toward late November. The great majority of it will be ready to be sown next spring.

Our new tractor arrived at the School, September 26th, and it has proven of great advantage,

being very powerful and enabling us to carry on our fall ploughing at a much greater rate. The new manure-spreader has saved us much time and is very useful.

The new cold storage addition to the kitchen at the Training School was sorely needed and we were pleased when it was finished by the stone masons on September 29th.

We were able to get a good start with the new students on October 2nd, as they all started at the very same time, and they are very interested in their work.

One hundred pullets were purchased and came to the School October 4, and were housed in the poultry building. They prevent waste by cleaning up the scraps from the kitchen. The Swans were brought down to the School in October and we fixed a pond for them and they are fine.

A new lily-bed, with helleborus in between the lilies, was planted near the Residence starting October 23, and it together with the display of hundreds of tulips planted nearby, should be very attractive next spring.

Friday, November 3, the students held their Hallow-e'en party and dance in the Lecture Hall and it was a great success. Doctor Snyder and Mr. Kammeier visited it and complimented the boys on their decorative work.

A successful Flower Show bringing many hundreds of people was held at the Glen Restaurant, Saturday, Sunday and Monday, November 18, 19 and 20, respectively. Attractive trees and shrubs from the School Grounds were arranged by the students, on the verandah outside the Restaurant and were an excellent addition to the chrysanthemums within.

This fall we have carried on a great deal of our arboretum planting. Widespread changes will be observed in the School Grounds by next spring. Landscape work is being carried on by the apprentices, down at the Mackenzie Building and Queenston. Owing to the very favourable weather for our outside work lectures will not commence before Christmas this year.

Two thousand six hundred and twenty-four quarts (2,624) of canned fruits, conserves, etc., were preserved this fall in the kitchen at the Training School. This includes tomato juice, beets, cherries, red currant jelly, gooseberries, prunes, pears, plums, beans, peach conserve, peaches, chilisauce, grape jam, citron and applesauce, etc. With the exception of the grapes and peaches everything else was obtained either at the School, being grown in the vegetable garden, or from orchards and lands belonging to the Niagara Parks Commission.

May I permit myself to say that the students are very interested in their work and that the personnel at the school have all been doing very satisfactory work.

"K. M. BROMAN",

Superintendent of Arboriculture.

A Report of the Work done outside the Training School Grounds by the Apprentice-Gardeners

DECEMBER 1, 1938, TO NOVEMBER 30, 1939.

Third Year (Year '39) — These students graduated July 14, 1939:	
Greenhouse,	936 hours
Oakes Garden Theatre,	328 "
Queen Victoria Park,	96 "
Glen (Sodding),	80 "
Assisting Entomologist,	72 "
Sickness and Absence,	108 "
Lectures,	185 "
Time Assisting Botany Teacher,	80 "
Queenston Tree Pruning,	168 "
Total,	2053 hours

Second Year (Year '40) — (Third Year after Year '39 graduated):	
Greenhouses,	1368 hours
Oakes Garden Theatre,	504 "
Queen Victoria Park,	320 "
Sickness and Absence,	468 "
Lectures,	221 "
Time Assisting Botany Teacher,	140 "
Queenston (Tree-Pruning),	400 "
Spraying,	108 "
Grading (Table Rock),	128 "
Mackenzie Building Landscaping Work,	368 "
Queenstone Restaurant Landscaping Work,	104 "
Queenston (Planting Bulls),	80 "
Assisting Hydro Mark Cable,	72 "
Trips (C.N.E.),	72 "
Military Camp, Niagara-on-the-Lake,	80 "
Total,	4433 hours

First Year (Year '41)—(Second Year after Year '39 graduated):

Greenhouse.....	1624	hours
Oakes Garden Theatre.....	1200	"
Queen Victoria Park.....	368	"
Glen (Sodding).....	32	"
Sickness and Absence.....	632	"
Lectures.....	152	"

First Year (Year '42)—(Students who enrolled October 1st, 1939):

These students are gaining experience at the school before being sent to work at outside points.

Lectures.....	10	hours
Total.....	10	hours

Total for Third Year.....	2053	hours
Total for Second Year.....	4433	"
Total for First Year ('41).....	5654	"
Total for First Year ('42).....	10	"

Grand Total..... 12,150 hours

HORTICULTURAL ACTIVITIES

The Report of John Oakes, Chief Gardener, Queen Victoria Park, covering the year's activities, reads as follows:—

"During the months of January, February and March, lectures of floriculture, greenhouse work, and vegetable gardening were given at the Training School from 2.30 to 3.45 each afternoon. This included Monday, Tuesday, Wednesday, Thursday and Friday. No lectures on Saturday, general supervision of the Greenhouses and Grounds along with preparation for the lectures taking up the rest of the time.

In the Greenhouse propagation starts in February and constant care has to be exercised to see that sufficient material is available for spring bedding and for cut flowers.

Grass cutting machinery is overhauled at this time. All the cutting units are cleaned, repaired and ground. Queenston Heights Park, Niagara Glen, Lundy's Lane and the Old Fort are included.

Spring work begins in April and the grounds are cleaned, shrub beds dug, and planting and propagation carried on at the Greenhouse.

On or about the 24th of May spring bedding is started. During the year 1939 approximately 20,000 plants were used in the Park Beds, 18,000 to 19,000 in Oakes Garden Theatre, 2,000 at Queenston Heights and 800 at Lundy's Lane, also the planting of plants for cut flowers at the Greenhouse along with the dahlias and gladioli.

Some 5,700 crataegus comprising 140 varieties, 76 malus, 5 varieties and 5,458 flowering shrubs, 146 varieties were sent to the Glen Nurseries. These were propagated and grown at the Greenhouse.

A supply of flowers was commenced at the Restaurant May 19 and continued until September 29. During that time 246 dozen Tulips, 511 dozen Gladioli, and 2,803 dozen other flowers was supplied. There were also several occasions when large quantities were required.

Decorative plants and palms were used during the season, both in the Restaurant and the Commissioners' Chambers.

Herbaceous plants were supplied from the Greenhouse Gardens to Oakes Garden Theatre, Glen Nursery and the Park.

During the summer months the supervision of the grading between Table Rock and the Canadian Niagara Power Company was carried out and seeding completed as far as possible. The sod at the southern end of Table Rock was left to a late date to enable us to use this for repair work in the Park Grounds.

Approximately 17,000 new spring Flowering Bulls were planted in Oakes Garden Theatre, 17,000 in Queen Victoria Park, 2,100 at Queenston Leights along with from ten to twelve thousand old bulbs.

Approximately 5,000 violas were planted at the Oakes Garden Theatre, 7,000 in Queen Victoria Park and 400 at Queenston. These were raised at the Greenhouse.

At the Canadian National Exhibition the exhibit of the Hydro Commission of Ontario was landscaped with lawn and shrubs. This was much appreciated by the Hydro Staff.

During the King's visit the decorations along the driveway, front of the Restaurant, Souvenir Stand, Glen Restaurant, Queenston Restaurant and the Gateway at the Training School were hung. Special flower beds were planted and the front of the Administration Building was decorated with flowering plants.

Chrysanthemms were grown at the Greenhouse in preparation for the annual Winter Fair exhibit, but owing to the outbreak of war, the cancelling of the Winter Fair, and the closing of the driveway past the Greenhouse the public were unable to see them. A display was erected at the Glen Restaurant and was fully appreciated by the public.

In the Greenhouse a supply of cut flowers is kept up as far as possible and the decorative plants and palms, which are used extensively in the Restaurant and Commissioners' Chambers, are cleaned and repotted during the winter months in preparation for the following season. 300 Cyclamen are grown.

The open fall made it possible to do much work on the grounds in preparation for the spring of 1940.

A desire is expressed at all time by the Horticultural Department, to co-operate with all departments so that the work of the Park System may progress with harmony and advantage to all.

"J. OAKES",

Chief Gardener.

APPOINTMENTS

Mr. and Mrs. J. E. Large, were named caretakers temporarily of Fort Erie Pavilion, later Mr. Large was named foreman carpenter, to succeed the late James Davidson and the post of caretaker at Fort Erie was given to Mr. P. Hershey, Fort Erie.

Mr. J. McEniry was retired as manager of the Park Restaurant, and Mr. J. A. Ingram, who had a splendid record of service in wide capacities, was named to replace him.

FATALITY MUCH REGRETTED

Charles Anderson, stone cutter, and James Davidson, carpenter foreman, were in a serious accident on September 20, when the car in which they were returning to the shops went down the ravine at the intersection of the Niagara River Parkway and Victoria Avenue. Mr. Davidson suffered a broken back and internal injuries, resulting in his death on October 21. Mr. Anderson sustained severe internal and external injuries.

The Board authorized payment of two months' salary to the widow of James Davidson and the question of compensation to Mr. Anderson and Mrs. Davidson was left to the Workmen's Compensation Board, the Commission meeting the award made by that body.

Ben Prior, employee at the greenhouse for the past 36 years, was struck by a car while travelling along the roadway to his home and was unable as a consequence, to do any heavy work. In recognition of his long, faithful and efficient work, the Commission authorized that he be kept on the pay roll at \$25 a month, to do only light work at the greenhouse when his health permits.

The body of J. J. Shea was recovered from the Whirlpool on June 28.

The body of Mrs. Maud Cross, missing since December 17, was found on the river bank near the Whirlpool on February 12.

FIRE PROTECTION

The question of fire protection for the properties of the Niagara Parks Commission, stretching from Old Fort Erie on Lake Erie to Fort Mississauga on Lake Ontario, is a vital one, and has been before the Commission for some time. As a result of consultation with the Falls View Hose Brigade, it was decided to pay that volunteer corps for all services rendered, and with Stamford Township, arrangement was reached to pay for all fire fighting service given within the Township limits, in connection with grass fires.

The major issue was with the City of Niagara Falls and after several meetings with the City Council representatives, it was decided to pay \$500 a year for complete service from the city limits on the north to the limits of Queenston escarpment, including the W. L. Mackenzie Home, plus a time basis for fires handled below the escarpment. Service within the city limits will be given as for any other property so situated.

Another agreement made with the City of Niagara Falls provided for amicable division between the City and the Commission for snow removal and summer cleaning of the River Road within the City limits.

APPRECIATION OF GIFTS

Your Commission was represented at the joint annual convention of the American Institute of Park Executives and the American Parks Society, by Commissioner A. T. Whitaker, who presented a comprehensive report on its activities as affecting such work as is within the jurisdiction of the Commission. Especial honour was paid to the Commission in recognition of Canadian participation actively in the proceedings of the Convention. As a direct result of a contact made at this and the previous convention, through Mr. Henry Teuscher, Superintendent of the Jardin Botanique de Montreal, the Commission in 1940 was made the recipient of a very large and comprehensive collection of rare trees and shrubs which test has shown to be hardy in the Montreal District and which therefore should do exceptionally well in the Niagara District. Through the utilization of these for cuttings in future years, it will be possible to reproduce many of these as specimens or for even more extensive plantings in the Arboretum of the Commission, at Niagara Glen, which in the years to come will be an outstanding attraction and which is one of the most recent developments of the work of the Commission. Opportunity is hereby taken to express the Commission's thanks to the Jardin Botanique de Montreal, and especially to Mr. Teuscher for the co-operation so freely given and the generosity shown in their valuable gift to the Niagara Parks Commission.

The City of Kitchener Board of Parks Management kindly gave to the Niagara Parks Commission two pair of swans and a letter of appreciation was forwarded to the Board. Unfortunately, three swans were removed and killed by marauders, their bodies being found later on. The wilful destruction was much deplored, but even with a reward of \$1,000 offered, no clue to the miscreant or miscreants was uncovered.

Dr. D. G. Storms presented the Commission with 1,200 iris plants, and recognition was made of this splendid example of generosity.

The Fort Erie Council offered to supply water gratis for the toilets and rest rooms in the Mather Park Gateway and for watering lawns and gardens in the traffic circle in front of Mather Park at the entrance to the Peace Bridge. A

letter of appreciation for the co-operation and courtesy shown by the Fort Erie Council was sent to that body, and also inscribed on the minutes of the Commission.

NEW WORKSHOPS PLANNED

During the year the services were engaged of Mr. Norman Mann, to prepare sketches for a new workshop, to be located in an inconspicuous spot, near the bank at the rear of the Commission properties in Queen Victoria Park where they would be easy of access, yet not a blot on the landscape, as is the present heterogeneous collection of wooden structures located midway between the Park Restaurant and the Administration Building, inconvenient of access and holding valuable lands which could better be used for extension of the rose, perennial and dahlia gardens.

The first sketches submitted were considered much too expensive, and they were revised. War conditions, however, coupled with declining revenue and increased costs necessitated by guarding the Commission properties, forced laying of the scheme in abeyance, to be taken up in times more propitious.

The revised sketches provide for a single storey building, all parts accessible by truck and with separate wall of steel shutter or similar action for blacksmith, sign painters, carpenters and machinist shops, enabling any of these to be shut off from the main area at will. The building will be narrower than first proposed and placed against the bank as close as possible and made also as inconspicuous as possible. The original plans called for an expenditure of \$60,000, the revised plans \$40,000.

GUARDING HYDRO PROPERTIES

In keeping with the policy of guarding essential points after the outbreak of war, the Commission's permanent and seasonal police, works and horticultural departments' staff and extra temporary men were employed from September 1 to September 15 as guards of the Hydro-Electric Power Commission property adjacent to the Parks Commission property. This guard duty was taken over by the Ontario Provincial Police after that date, until November 1, when the Royal Canadian Mounted Police took over the duties. A further change was made later, when because of the pressure of other duties in the Dominion, the R.C.M.P. were replaced by the Ontario Provincial Police. Later the Department of National Defence took over the guarding of this property, but this did not take place until the end of May, which does not come within the scope of this report.

NO THROUGH TRUCKAGE

Since the Commission Parkway along the Niagara River was not constructed for the handling of heavy tractor and trailer or heavy truck traffic, and the bridges were not built to handle such weights as are now on the roads, the Commission gave instructions to enforce the ban on one of the parkways by through trucks. Delivery trucks for points along the Parkways are allowed.

GRANTS FOR YEAR

Grants made during the year, as in previous years, were as follows:

Women's Historical Society of Wentworth, \$800 for care and upkeep of Stoney Creek Battlefield Memorial.

Niagara Falls General Hospital, \$200.

Niagara Falls Chamber of Commerce, for publicity assistance, \$250.

Niagara Falls Y.M.C.A. half fee of apprentice gardeners who wished to use its facilities during their term.

The Niagara Parks Commission scholarship of \$25 to the Niagara Falls Collegiate Vocational School was won by Carl Mueller, Third Year Technical Student. The grant was authorized for the following year.

ENTERTAINMENT

Entertainment extended during the year, aside from the visit of Their Majesties, included:

- | | |
|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| April | 28—Crown Prince and Princess of Denmark and party, Table Rock scenic tunnel trip. |
| June | 4—Hon. Albert Matthews, Lieutenant Governor of Ontario and Mrs. Matthews. |
| | 16—Members of Fruit Growers' Association of Ontario, Niagara Blossom Festival and Dominion and Provincial Departments of Agriculture, dinner at Park Restaurant. |
| July | 12—Mr. McIntyre, Department of Labour, New South Wales. |
| | 25—Missouri State College Students, Table Rock Tunnel Trip. |
| August | 3—Canadian Weekly Newspapers Association, dinner at Park Restaurant. |
| | 9—Scottish Women's Institute, 75 members, Scenic tunnel trip and special meal at 60 cent rate for Park Restaurant. |
| | 9—Party of English Cadets, tunnel trip. |
| | 16—Thomas Hunter, M.P. for Kinloss and Perth, Scotland. |
| | 30—Mr. and Mrs. W. T. McConnell, Manager, Victorian Tourist Bureau, Melbourne, Australia. Mr. and Mrs. R. R. Ellen, Assistant Australian Trade Commissioner, Toronto and Mrs. Henderson. |
| September | 6—English School Teachers, meal at Park Restaurant.
Governor of State of Delaware. |
| | 9—Mr. and Mrs. Malloch, member of the Commonwealth Dried Fruits Control Board, Australia, and daughter.
Mr. and Mrs. R. R. Ellen, Assistant Australian Trade Commissioner, Toronto, and Miss Malloch, London, Ontario. |
| | 24—Luncheon and dinner at the Park Restaurant for Women's Press Association. |

BRIEF NOTES OF INTEREST

Steps were taken during the year to set up regulations covering the use of display signs along the Niagara Parkways within the jurisdiction of the Commission, with a view to prevention of destruction of the scenic beauty. Preservation of vistas is one of the fundamentals of park properties, and erection of signs will be discouraged as much as possible.

It is the intention of the Commission that there shall be no exploitation and as little commercialization as possible of the Commission properties.

Because of Restoration of the William Lyon Mackenzie home at Queenston, the Commission undertook to improve the connecting roads with Highway No. 5A, portion of Queen Street in front of the building was closed in this connection.

Pictures from the late Sir Henry Pellatt collection, (162 military framed prints and others) were purchased for the Fort Erie Museum at a cost of \$500 from the Ryan Art Galleries, Toronto.

The Commission co-operated with the Ontario Hydro-Electric Commission in an exhibit at the Canadian National Exhibition, Toronto.

The tusk of a prehistoric animal, found while excavating at the Fort George site, was presented to the Royal Ontario Museum.

During the season, the Canadian Corps Band, (formerly the Niagara Falls Kiltie Band), was engaged for two concerts at the Oakes Garden Theatre, and the Lincoln and Welland Regiment Band was engaged for a concert at Queenston Heights Park during the summer. The Wellington Flute Band also gave a concert during the season in Queen Victoria Park. The Hermes Club presented a programme of Folk Dances in connection with the playground activities sponsored by the club each summer.

The bathhouses at the Dufferin Islands have become dilapidated with the lapse of time and the Commission decided to have them torn down, no steps being taken to replace them for the time being.

The Commission decided as a policy against allowing the placing of curb pumps adjacent to Commission property.

Complete financial statements, prepared by the staff and audited, follow this report, which is respectfully submitted to your Honour by,

HON. T. B. McQUESTEN, Chairman.
DR. G. B. SNYDER, Vice-Chairman.
HON. W. L. HOUCK, B.S., M.L.A.,
A. J. HAINES, M.L.A.,
JOHN C. M. GERMAN, K.C.,
ROSS HARSTONE,
A. T. WHITAKER,
DONALD MCGILLIVRAY.

March 28th, 1941.

THE HONOURABLE MITCHELL F. HELPERN, M.P.P.,
Prime Minister of Ontario,
Parliament Buildings, Toronto.

DEAR SIR:

Owing to the absence of the Chairman of this Foundation on important duties associated with Canada's war effort it has been my privilege during the latter part of 1940 to assume his responsibilities.

I have great pleasure in placing before you our Annual Report, which includes a financial statement and also the report of the Director in regard to the work performed in the various laboratories.

You and your colleagues will be gratified to learn that not only have we been able to extend our services to Industry and Agriculture, but in addition the steadily increasing demands of the War Service Departments have been efficiently met.

The buildings and equipment have been maintained and expanded to meet the increased demand for service. Our finances are in a healthy condition.

I commend this Report to the attention of Members of the Government and of the Legislature.

I have the honour to be,

Your obedient servant,

E. G. BAKER,
Vice-Chairman.

REPORT OF THE DIRECTOR OF RESEARCH, 1940

TO EDWIN G. BAKER, ESQ.,

Vice-Chairman

DEAR SIR:

Before commencing my annual report on the work of the Foundation I desire to refer briefly to the death of Dr. T. A. Russell, a member of our Advisory Council and a friend to whom we could always turn for help and advice. Although the greater part of his life was spent in close association with many industrial and financial enterprises it was in the agricultural side of our work that he showed keen and sustained interest. For several years he presided at the meetings of our Advisory Committee on Bang's disease, his own herd being one of those placed at our disposal for observation and testing. When in good health he constantly sent to us clippings and references which indicated the extent and thoroughness of his own reading. Farming to him was not a hobby conducted along wholly unpractical lines. He put into it all his business training combined with a passionate love for the land and good stock.

During the past year the investments of the Foundation have been carefully reviewed at regular intervals by your Advisory Committee, and their recommendations carried out.

In spite of the dislocation of many peace-time industries and the transfer of men and machinery to war production the income of the Foundation received from industry was higher than in any previous year. This has been supplemented by that received from various official bodies. We have endeavoured to put into effect the policy that the services of the permanent staff of the Foundation should be available to the Departments of Government responsible for Canada's war effort. With the full agreement of the officers of these Departments we have been reimbursed for the salaries of additional staff and the materials used in work which has been done at their request.

Before the summer months had passed, the majority of our regular staff and a relatively larger number of recent additions were engaged on war work. By the end of the year the various units were running smoothly and efficiently. There are still variations in the daily demands for these services, but the general trend continues upward. Our staff is becoming more familiar with service specifications and the products covered. In a natural way they are becoming better able to solve the problems of and to help those who are engaged in the production of war materials. I regret that for the present it is not possible to refer in detail to what represents by far the major portion of our activity during the year. Your senior staff is largely composed of men who combine scientific

ability with industrial experience and technical knowledge. It is our conviction that in times like these our first duty is to assist in so far as we are able the speedy production of what Mr. Churchill has so aptly described as the "tools."

Although it is not possible to refer to them in detail it will not be difficult for you to imagine some of the problems and difficulties which such a period brings to a research organization. The atmosphere is not conducive to reflection, and unbroken attention to a programme of experimental work is not possible. Due to a proper attitude of mind and heart to the major problem these conditions have brought contentment rather than disappointment and restlessness. It has been our privilege to make some contribution to the common effort, and because of this attitude to work and to one another the change from a peace to a war-time basis has been possible.

Before closing this introduction to my report I should like to look ahead, to the days when Canada will once more be at peace and struggling with old and new problems. It is, I know, your hope that we should endeavour now to prepare to play our part. What can such a group contribute? Experience suggests the folly of isolation in thought or action. Looking back over our comparatively short history one thing stands out clearly, namely, that the best results have attended our efforts when we have had the privilege of working with others. This is another way of expressing the fact that we have a contribution to make but rarely a solution. The past year, from this point of view, has not been a waste of time or effort. One important by-product of our work has been the opportunity presented of making contacts with those with whom we ought to work in fields of increasing difficulty and importance. Scores of industrial units have come to know more about the Foundation. In the near future we hope to think out ways and means of interesting some at least in the potential value of long term research projects. The financial problem has diminished, and if industry looks ahead we should have no difficulty in putting men to work in order to take advantage of favourable opportunities which exist to-day.

In one of the late Lord Tweedsmuir's addresses he discussed the problems associated with the great depression and the methods by which Canada could successfully overcome them. The following are a few sentences from his address: "To the younger nations the problem used to be simple. Push the frontier a little further back—so ran the answer—strike out new lines, develop new wealth; the wealth is there; it only wants hard work and enterprise to win it. The situation is changed to-day. In a very real sense there are no frontiers left on the physical map. They must be sought in the world of the mind and the spirit. A country may have immense undeveloped natural resources, but these are not wealth which can be easily and confidently realized; they do not become wealth until and unless they can be related to the demands and the uses of the rest of the world."

In these few lines our late Governor-General bridged the gap between the things of the mind and the spirit and the daily life of ordinary men and women, between the laboratory and the factory, between science and commerce. If

such a relationship can be established in Canada we need not trouble ourselves overmuch about the future. This Foundation will continue to play a part if we can preserve within its walls the spirit and the method of science and at the same time gradually win for ourselves the respect and confidence of our industrial leaders.

AGRICULTURE

The war is creating new problems for those engaged in agriculture. On the one hand certain products, notably grains, are accumulating in Canada and prices are low. Others such as butter, cheese and bacon are in demand for export as well as domestic consumption. In normal times our farmers would look for and expect rising prices, but for the time being we are operating under a controlled economy and one of fixed prices. We are unable to discuss whether the widespread feeling among farmers that prices for their products are out of line with labour costs, etc., is justified. We call attention once more, however, to the problems which grow out of the great variation in costs of production on Ontario farms. To some extent these are beyond control and are due to normal fluctuations in weather conditions. The human element also must be variable. Apart from these there are the constant variations which grow out of our refusal to correlate our agricultural economy to the characteristics of soil and climate. If the cost of milk production varies by over 100 per cent, how is it possible to fix a price for butter and cheese which will bring a return to all farmers and not be unfair to the consumer? To this fundamental fact we must turn also for an explanation of the comparative failure of farmers in Ontario to cooperate successfully in buying or selling. Success in other countries is invariably based on a certain uniformity in skill, conditions on the land and in costs of production. Within our own Province this has been demonstrated by the growers of tobacco.

When a farming community is not receiving adequate returns for its products over a long period, certain changes take place. The social changes lie outside the scope of our work. One change with which we are concerned is the slow depletion of the soil, and the destruction of one of our greatest assets; sometimes a permanent destruction and frequently one which makes recovery an impossible task for the farmer of average means. Mechanization, and the effort to reduce costs thereby, is adding to the problem. So long as an abundance of farm manure is returned to the land certain essential elements for crop growth are usually available in the soil. In the absence of this there is evidence that such elements as zinc, boron, copper and manganese may fall below the required concentration. To replace them as constituents of mixed commercial fertilizers is not easy because whilst minute quantities are essential it is possible to create toxic conditions by too much. Not only is it necessary to know the requirements of particular crops but the chemical study of our soils must include a study of the concentration of these essential elements. At the present time we are studying the areas which show evidence of trace-element depletion, and also characteristic deficiency diseases, e.g. boron deficiency in the apple, sugar beet and turnip; copper deficiency in the onion and manganese deficiency in oats.

Last summer was not only disappointing to persons on holiday. The unusually large number of cloudy days had a marked influence on the yields and quality of certain crops. Advantage was taken of these conditions to collect factual data showing this relationship.

During the winter months work has continued on soil samples collected in Eastern Ontario. Maps of this area showing the following characteristics: natural vegetation, depth to bedrock, topography, drainage, stoniness, acidity-alkalinity, available calcium, phosphorous and potash. These maps will form the basis of a complete report.

Summer work was devoted chiefly to preliminary studies along similar lines in Western Ontario. When this area is completed the whole of Southern Ontario will have been covered and the fundamental data will be available.

The changes in rural population in Southern Ontario up to 1931, the year of the last census, have been analyzed and recorded.

A commencement has been made of a survey of land values in rural Ontario and their relationship to soil, climate and economic factors. Experience has shown that the assessment values do not provide a basis for accurate comparison between areas. We are exploring the possibilities of figures secured from Registry Offices relating to actual sales.

During the past five years a carefully selected group of refugees from Europe settled in rural Ontario. It is of great importance not only for the present but having regard to post-war conditions in Europe to know what the results of this policy have been. A careful survey of these families has been made and our report has been helpful to those engaged in immigration and social work. In general it may be said that these new Canadians have been absorbed, that they are not a burden on the community and that they are making a real contribution to rural life.

PATHOLOGY AND BACTERIOLOGY

During the summer of 1939, Dr. Hadwen was loaned to the Federal Government in order to visit and report upon the condition of reindeer herds in the far north and also the buffalo herd and other wild animals at Wainwright. During the past year he has completed this work which included the examination of the specimens and other material placed at his disposal. Because of his earlier contacts with the buffalo herd, and his long experience with problems of this nature, it was appropriate that he should render this service. Dr. Hadwen recommended that the buffalo herd and other animals at Wainwright Park should be destroyed on account of the incidence of tuberculosis and the over-grazed condition of the Park. This recommendation has been put into effect.

Work on mastitis in cows has continued throughout the year and two reports have been published in the literature. Our original purpose was to develop if possible a quick and reliable microscopic method for the diagnosis of mastitis. This has been accomplished by a detailed study of the cells present in

normal and various types of abnormal milk. This method in the hands of a trained observer is as reliable as any of the cultured methods or biochemical tests. In addition it is speedy and should reduce the cost. At the present time it is virtually impossible for the average farmer to keep the records regarding his herd which maximum efficiency demands.

Evidence has been secured proving that the leucocytes, i.e. cells, set free and present in milk are capable of destroying the characteristic bacteria which are associated with mastitis.

A commencement has been made on a study of the pathological changes in the udder of the cow caused by tuberculosis and other diseases. This is accompanied by a badly needed reconsideration of the development, structure and physiology of the normal udder.

During the late autumn the staff was completely occupied in field studies, autopsies and laboratory work arising from a widespread outbreak of some respiratory disease among young pigs. The outbreak was characterized by chronic coughing, gradual loss in weight and a high mortality rate. Autopsies showed chronic pneumonia in the majority of cases and the presence of lung worms and intestinal round worms. Cultural studies of various organs indicated the presence of a variety of bacilli and cocci. One point in connection with this outbreak needs special emphasis. In the middle of an area in which this disease was widespread my colleagues visited a large breeder of hogs and failed to discover the least sign of trouble. The explanation is quite simple; good sanitation and proper feeding. A recent article by an authority in the United States includes the following sentences, "It is becoming more difficult to raise hogs profitably in the United States. The trouble is parasites including bacteria, all of which can be controlled where the will to do so exists." Ontario is now facing increasing competition from the western provinces in the raising of hogs. It is partly due to outbreaks similar to the one we have been studying that production costs are high.

The investigation of the life history of a parasitic fly which attacks and destroys the larvae of the clothes moth has progressed rapidly and successfully. To complete our previous observations a study has been made of the influence of temperature and humidity on the rate of development of the larvae of the parasite. The influence of temperature is indicated by the following: the average weight of larvae just before pupation was 8 mg. at 20°C and 4 mg. at 27°C respectively. Other interesting facts concerning the parasite are as follows. Only females exist and the eggs are produced by parthenogenetic fertilization. Adults are attracted by bright lights, and may be kept alive for several weeks in the laboratory on a diet of dilute honey. More than one egg may be deposited in the moth larvae but only one reaches maturity. The life cycle is complete in approximately 26 days at 27°C and in several months at 20°C.

If the parasite is to be put to work destroying clothes moth larvae, and ultimately the moth population, it will be necessary to use some other method for producing large numbers. There is a possibility that other hosts exist, and a search is being made for one which is more easily handled than the clothes

moth. This research has uncovered various other problems related to the use of parasites for the destruction of pests, and also the nature of the physiological relationship between the host and the parasite, e.g. what is the substance on which the parasite feeds, why does only one egg develop?

This group of workers has given valuable assistance to their colleagues in the industrial laboratories in connection with problems involving insects, bacteria, etc., e.g. moth-proofing tests, phenol coefficients of insecticides, insect pests in foodstuffs. In addition, a number of specimens from the Department of Game and Fisheries and the Royal Ontario Museum of Zoology have been examined and reported upon.

TEXTILES

The work of this Department continues to expand, especially in regard to its contacts with the various branches of the textile industries, mills, wholesale houses, retailers and manufacturers agents. During the past two years approximately 100 new names have been added to the list of firms for which work has been undertaken. The field of technology covered is very large, there is great variety in the questions and problems submitted and it is a tribute to the staff that whilst progress in this section has been maintained there has been no curtailment of work relating to more fundamental problems.

A considerable proportion of the testing work in 1940 has been in connection with fabrics and other materials manufactured for war supplies, and the requests have come chiefly from the manufacturers and not official bodies. Uniform cloths of different types of material and weights, silk parachute fabric, wool linings, wool and cotton underwear material, whip-cord, khaki gloves, parachute cords and harness, silk powder bags are some of the materials handled. By contributing to the production of large quantities of these materials to rigid specifications the Department has made a useful contribution to our war effort. Tests include tensile strength, fastness to light, washing and perspiration tests, resistance to attack by mildew, bursting strength, freedom from traces of certain metallic impurities, structure and percentage composition in terms of various raw materials.

Another sign of the closer relationship between the manufacturer and these laboratories is the increase in the number of plant visits made at the request of those in control. The fact that we are able to render some service should not prevent a recognition of their importance to us in providing most valuable practical experience.

The war is creating problems of a somewhat different character in connection with peace-time requirements. Pressure on existing supplies of certain raw materials is creating a need for substitutes which possess as many as possible of the essential properties of the originals. The question of certain imported dyestuffs and other chemicals may become more serious in the near future.

There has been in addition the usual quota of interesting and sometimes baffling short-term investigations associated with failure to produce the required fabric or other material.

To enable this type of work to be performed efficiently and with the least interruption of other work we are slowly adding to the equipment of the Department. The following additions have been made during the past year:

(a) Daylight lamps for the examination of coloured materials.

(b) A constant rate-of-loading yarn strength tester.

(c) A three-unit apparatus for agitating fabrics in laundering and dry-cleaning solutions. These tests can now be carried out in larger numbers and under rigidly controlled conditions.

We have now completed our ninth year of cooperative work with Courtaulds (Canada) Ltd. and other firms associated with the Quality Control Plan. It has grown from a small group interested in knitted rayon garments until now many fields of merchandise are covered. It is gratifying to report that 1940 was again a record year. This has naturally brought with it a heavier load of control work and at the same time created new and interesting problems. Towards the close of the year the work and requirements of this section were carefully reviewed by representatives of Courtaulds and the Foundation. It is a pleasure to record that as a result of this conference the budget was considerably enlarged and in the coming year additional staff will be available. These changes will make it possible to devote more time to outside contacts and to a study of problems uncovered by the routine administration of the Plan.

Our annual survey of knitted garments made according to the Plan and sold across Canada indicates a gratifying conformity to the specifications agreed upon.

At the close of the year eighteen manufacturers of fabrics and about eighty manufacturers of garments were cooperating in the Plan. Several of the specifications relating to important groups of fabrics, e.g. drapery materials, have been revised. If our specifications are to fulfil their purpose and give satisfaction to the manufacturer and the consumer they must involve tests which predict with the maximum of accuracy the behaviour of the material under normal wearing conditions. Each year more information is available on which to base a critical examination of our methods, and there is every reason to believe that the underlying conception of the Plan will gradually influence other branches of industry. One of the problems which requires more than technical experience is that of deciding from time to time how to effect a compromise between the claims of serviceability and those of fashion. A careful analysis of consumer complaints assists in our efforts to maintain the highest possible standards. During the past year these have been remarkably few in number and in only one case was it found necessary to change our standards or methods of testing.

The following problems arising from the Plan have been given more prolonged attention and are still under consideration:

(a) The relationship between seam construction and serviceability.

(b) Effects of different finishing processes on the strength of dress fabrics.

(c) A comparative study of length of life of wool socks and wool plus rayon socks.

(d) Influence of time and other factors on the extensibility of drapery fabrics.

The research work carried on during the previous year has been continued. In my last report I referred to the work in progress relating to the physical and structural characteristics of silk fibres. Using the same technique our work on the response of silk to water vapour over a range of relative humidities and pressures has been extended to cover a number of organic substances including alcohols, ethers and ketones. Observations have been made on the physical properties of fibres in various stages of moisture absorption with particular reference to their elasticity and plasticity. The data secured has provided a mathematical basis upon which to predict the behaviour of filaments under conditions of stress varying with time. The work has contributed to an interpretation of load-extension curves obtained by other workers who have applied a uniform stress on the filaments.

The study of fibres in relation to alcohol and other vapours is based on their chemical characteristics which are similar to those of water. It has been found that alcohols of low molecular weight are readily absorbed and given up by silk fibres in response to changes in the atmosphere. Under a high vacuum all the absorbed alcohol cannot be removed, but the "residue" alcohol can be removed by exposure to a low partial pressure of water vapour or by raising the temperature.

During this period of rapid development in textile technology it is appropriate that we should endeavour to make some contribution to our knowledge of the structure and properties of a fibre such as silk. The methods and conclusions will greatly facilitate future studies of other materials.

The investigation of the principles of "scouring," i.e. the removal of oils from semi-processed textile materials, has continued. During the past year a successful attempt has been made to determine the necessary conditions in the scouring bath for the removal of natural oils, e.g. olive oil, and the type of paraffin oil which is used to some extent in the textile trades. The two types of oil differ fundamentally in their chemical composition and both theory and specimen suggest that their successful removal must take this fact into account. At the present time the price of vegetable oils is rising due to war conditions, and considerable economy in processing costs would be accomplished if mineral oils could be substituted. The work this year has produced encouraging results, and in the near future plant scale tests are contemplated. This investigation has been partially supported by a grant received from Imperial Oil Limited.

During the year Dr. Goodings has served on the Research Committee of the American Association of Textile Chemists and Colourists, and Mr. Staples on committees of the Textile Section of the American Society for Testing Materials. These contacts are of the greatest value both to the Foundation and to the textile industries of Canada.

ENGINEERING AND METALLURGY

My previous reference to the effects of the war on the character of the work performed in the laboratories applies particularly to this Division. Our own plans have been put aside whenever it was felt that they would interfere with the performance of duties associated with war effort. A reasonable continuity of work is essential if success in research is to be accomplished, and this has proved to be quite impossible during the past year. This is not to say that no effort has been made to keep research projects alive or that no progress has been made.

Another contributing factor to this condition has been that the staff has grown considerably in numbers by the addition of young and inexperienced workers. At the same time junior members of the scientific staff and technical assistants have left the Foundation, often with the assistance of my senior colleagues, to accept opportunities in industry. In spite of these difficulties an expanding organization has been given a sound technical training and imbued with a spirit of loyalty and cooperative effort.

There is another time-consuming and in a sense disruptive type of work which brings no obvious or immediate return to the Foundation. I refer to the many hours per week spent in discussion with visitors. The war has increased this demand upon the working hours of the staff very considerably. I am confident that it represents a definite contribution to industry which is appreciated.

During the year fifty-nine investigations have been performed for private companies and for various government departments. Three companies paid to the Department an annual fee for consulting service.

The physical testing laboratory has been more fully occupied than in any previous year, the number of tests being about six times those performed in 1939. With the development of aircraft production in Canada and other new types of industrial production the variety as well as the volume of work has greatly increased.

Shortly before the war commenced we began to improve the facilities in the Foundation for the heat-treatment of metal parts. In addition to providing opportunities for research we had reason to believe that industry would take advantage of these facilities for the treatment of relatively small but expensive castings, etc. The experience of the past year has more than justified the expense and effort involved. Ninety firms have sent material in for treatment, some of them at regular intervals. Others have used the furnace room here to great advantage in order to speed up other work whilst their own furnaces were being installed.

Early in the year the preliminary steps had been taken to create facilities for the testing of gauges to be used by industrial and government inspectors. The extent to which this work has increased is indicated by the fact that in December we tested as many gauges as in the first six months of the year. During the year the staff engaged on this important work has increased from 2 to 15. I feel that the senior members of the staff are to be commended for their work in

training this group and for the efficient system of records which they have gradually instituted. During this period of expansion and training the output of gauges per man-hour has doubled. We are indebted to officers of the Departments of the Inspector General, the Ministry of Munitions and Supply and the National Research Council for advice and assistance.

The machine shop has continued to render valuable service to this department in connection with the gauge and physical testing laboratories. It has also contributed considerably to the successful operation of all Departments by designing and constructing experimental apparatus and testing equipment.

The following research projects have been pursued during the past year:

(a) A study of the influence of the cross sectional area of a test-piece on the fatigue strength as measured by the Avery machine. Our machine has been gradually modified and improved in design. The experimental side has suffered considerably from interruptions.

(b) The resistance of various alloys to abrasion. Improvements in our experimental ball-mill have been made allowing for very close control of the atmosphere within the mill. A report on the experimental work of the past three years will shortly be ready for publication.

(c) A member of the staff completed a thesis dealing with the solubility of carbon in alloys of iron and tungsten and was granted the degree of M.A.Sc. by the University of Toronto.

(d) Progress has been made on a study of the malleability of a white cast iron in relation to variations in chemical composition.

Mr. Tasker continues his membership of the Research Committee of the American Society of Heating and Ventilating Engineers and more recently was elected to the Council of the Society. Mr. Ellis continues to maintain our contacts with the Ontario Chapters of the American Society for Metals and the American Foundrymen's Association.

Shortly before the close of the year Mr. Ellis received word of the award to him of a Plummer medal by the Engineering Institute of Canada. It is appropriate that this distinction should be conferred on him during the period in which he is rendering unremitting and distinguished service to the Government and to industry.

CHEMISTRY

Early in the year the preliminary steps had been taken to equip two sections of this Division with apparatus and personnel to carry out metallurgical and organic analyses. The extent to which the work on behalf of Government has increased will be made clear by stating that in January 6 samples were submitted and in December approximately 217 were received. During the year we estimate that about 18,500 determinations were made, or 10 times the number in the previous year. The growth has not been steady or uniform over the entire field of technology involved. Sharp peaks have occurred first in one

section and then in the other. Pressure on our staff and equipment in connection with a certain type of material has persisted for a time and suddenly the demand for this particular service has ceased. Such conditions are inevitable having regard to the supreme importance of the time factor in our war effort as a whole. The impatience and natural criticism which are occasionally voiced in connection with apparent delays in production lose some of their point when we remember that the industrialists and technical personnel of Canada were suddenly confronted with thousands of specifications, highly specialized in character and demanding extreme accuracy. One of the gratifying experiences of the past year has been to see the number of firms in Canada which have attained splendid records as shown by inspection results. It is equally gratifying to be able to report that the figures submitted by the staff have been rarely challenged by the manufacturers. This is all the more creditable to my colleagues if we remember that a large proportion of the analytical procedures involved are not commonly in use and some have had to be developed in our own laboratories.

For short periods, practically the entire staff of the Division and men drafted from others have been concentrated on this work in order to avoid delays in manufacturing plants.

Short term investigations carried out in the Division on behalf of manufacturers and others show an increase over the previous year of 20 per cent. Many of these were directly associated with war supplies. Others arise from the higher cost or complete absence of commodities normally used by various industries in Canada. The following list of materials involved in the first 10 of the 180 such investigations will indicate the variety of problems submitted to this Division: glue, veneered furniture, wire screening, ozonized eucalyptus oil, cleansing tissue, water softening agent, aluminum panels, rotogravure emulsion, natural gas, oil sludge.

In addition to these the Division has received financial support from the following companies in the carrying out of longer term and more important investigations: Consumers' Gas Company, Toronto, Imperial Oil Ltd., Toronto, Wm. Wrigley Jr. Company Ltd., Toronto and Mallinckrodt Chemical Works Ltd. of Canada, Montreal. It is this side of our work which must be extended and supported by the industrialists of the Province if the potential value of the Foundation is to be realized. The record of the past year amply proves this statement. New processes are being developed, older ones are being modified to give greater efficiency and new products are being manufactured.

BIOCHEMISTRY

In cooperation with the National Research Council a revision was undertaken of existing Canadian specifications for boots to be supplied to the Army, Navy and Air Force. Tentative specifications were submitted to the Department of National Defence, and during a period of several months samples of leather used by contractors were tested by physical and chemical methods. Similar tests have been performed on behalf of the Inspector General's Department.

Research work in the leather laboratory has been chiefly concerned with further improvements in the method for intermediate alum and chrome retannage of heavy leathers. A critical comparison has been made of leather prepared by these methods and standard vegetable-tanned leather. A pilot scale investigation of rocker tan yard operation was made in order to effect the necessary changes in standard practice to fit in with the needs of the proposed new process.

Work has been in progress throughout the year on methods for the production of organic acids by fermentation.

In continuation of the work supported by the Beamish Sugar Refineries laboratory research has been focussed on the production of pure lactic acid for edible and medicinal purposes. The production of commercial lactic acid on a plant scale is now in successful operation.

During the past ten years tremendous strides have been made in our knowledge of both the physiology and the chemistry of those important elements in our diet which are called vitamins. Each year adds to the number of those which can be either isolated from natural products or synthesized from simple chemicals in the laboratory. The rapid growth of those industries based on this knowledge indicates a growing recognition of its importance by the general public. In many countries state action is being taken to compel the introduction or retention of certain vitamins in staple foods, such as bread, and in addition stringent regulations are being enforced to control the sale of both food and pharmaceutical preparations.

We have endeavoured to make some contribution to these developments in Canada by placing at the disposal of manufacturers trained personnel and equipment to perform vitamin determinations on their behalf. During this period of rapid development this has involved a painstaking survey of numerous methods which have been recommended in the literature. We have been especially concerned to verify the new chemical methods which are more rapid and therefore cheaper and more suited to the work of a control laboratory. Not long ago it required 3 months to make an accurate measure of the B₁ vitamin complex by growth tests using white rats. Today the same information can be made available in 48 hours.

For several months we carried out biological assays of materials containing vitamin K, the constituent in blood which is anti-haemorrhagic. So far our results have not given us sufficient confidence to undertake any outside work involving the assay of commercial products. We suspect that the difficulty is associated with our basal diet and not in faulty technique.

Our facilities for determining the vitamin D content of foods have been enlarged during the year. The laboratory has been designated as one of the official testing laboratories by the Dominion Department of Agriculture which is endeavouring to set and control standards under the Feeding Stuffs Act. These regulations apply to vitamin A and vitamin D. Collaborative work has been undertaken with other laboratories to determine the effects of certain methods of procedure on the final assay figure.

For milk and other products intended for human consumption the rat-curative method is used for measuring the D content. Our laboratory has not only carried out commercial assays successfully, but by experimental work considerably improved our technique giving us much greater consistency and reliability in this important field.

After a careful study of the various chemical methods which have been recommended for the determination of B₁ we have in recent weeks concentrated our efforts on the fermentation method. Small additions of B₁ to a yeast suspension in sugar solution cause quantitative increases in the production of gas. The volumes of gas produced are measured accurately and we have been able to obtain consistent and sufficiently accurate results. Before undertaking outside assay work this procedure was checked by the rat-growth method. If the expected development of B-containing bread takes place this method should be of great assistance in control work either in flour or loaves. The Department is collaborating with a distinguished group of scientific men in the United States who are working together to develop cheap, rapid and reliable methods for these determinations.

A bacteriological method for the estimation of riboflavin has been slightly modified and standardized. It is now being used successfully in the analysis of human and animal foods.

To summarize: after careful checking and investigation of numerous methods this Department is now in a position to perform accurately and economically biological or chemical assays of vitamins A, C, D (rat and chick), B₁ constituents and riboflavin.

All of which is respectfully submitted.

Faithfully yours,

H. B. SPEAKMAN,

Director.

RALPH SKELTON,
Secretary-Treasurer.

I have audited the books and accounts of Ontario Research Foundation for the year ended December 31, 1940, and I have received all the information and explanations I have required and I certify that, in my opinion, and subject to my report, the above Balance Sheet is a true and correct view of the affairs of Ontario Research Foundation as at December 31, 1940, according to the information and explanations given me and as shown by the books.

All my requirements as auditor have been complied with.

Toronto, Canada, January 15, 1941.

ELLIOTT ALLEN, F.C.A.
Of Allen, Miles & Fox,
Chartered Accountants.

TO THE HONOURABLE ALBERT MATTHEWS,
Lieutenant-Governor of the Province of Ontario.

MAY IT PLEASE YOUR HONOUR:

The undersigned has the honour to present the Annual Report upon the Ontario Training Schools for the year ending 31st March, 1941.

Respectfully submitted,

H. C. NIXON,
Minister.

HONOURABLE HARRY CORWIN NIXON,

Provincial Secretary of Ontario.

SIR:—

Every year it is necessary for Children's Aid Societies, Big Brothers, Big Sisters, Service Clubs, Sundays Schools, school teachers, courts, police, friends and relatives, and many others to assist parents whose children are behaviour problems. The great majority of these problem children are successfully adjusted by the efforts of the local citizens and officials. The failures are those who are sent to our Training Schools. For the year ended March 31st, 1941 there were 511, an increase of 15% over the previous year's total of 444.

The attached reports of the Advisory Board and the Superintendents reveal to some extent the thorough, careful effort which is made by trained minds of conscientious, self-sacrificing men and women to salvage this human material. We are proud that in this province we have those who give such faithful service. To help some faltering child to find his way is one of the noblest of human endeavours.

In mentality these boys and girls range from superior intelligence to morons. They come from well-to-do comfortable homes, and from places not worthy to be called homes. They come from the country, from the city and from places in the far north. In academic education they vary from near illiteracy to high school. In chronological age from ten to sixteen, mentally younger, but in evil knowledge some of them are old—so old.

Above all other things they have missed real home life and the careful guidance of kind, wise parents.

Obviously, the proper programme in the Training Schools must be just as varied and wide as the needs of these children. They have been developed accordingly and staffed with men and women who have a keen appreciation of the requirements, combined with a liberal supply of human kindness. These men and women, of course, have their deep disappointments, but more often they have the deep satisfaction of seeing their wards growing into useful, successful men and women. The fine patriotism of the graduates is proved by the large enlistments to the war services. These Training Schools are operating at a high degree of efficiency.

Since this war started juvenile delinquency in some of the large English cities has increased fifty percent or more. This is not surprising to trained social service workers, who appreciate the inevitable results of broken home life. In Ontario, the absence of fathers, and the temptations because of war conditions are partly responsible for the fifteen percent increase in the number of children sent to Training Schools this past year. But in other years there were some who should have been sent, but went instead to the Reformatory. A better appreciation of the good work of the Schools is spreading. They are therefore being used more when necessary, and the children are being sent while still at a younger, more susceptible age.

The Schools at Bowmanville and Alfred are well provided with land, buildings and equipment. St. John's School building is old and not fireproof. A new suitable

building, or buildings, to replace it should be erected elsewhere on ample acreage. St. Mary's new School on Dufferin Street outside Toronto is almost ready for use. The buildings of the Galt School are new, very modern and suitable, and the acreage is adequate, but there the school population has increased away beyond capacity. Foster home placement has been used to the fullest extent, even to the danger point. It is foolish to place a problem girl outside the School until proper character and habits have been sufficiently developed. Very serious consideration should be given to enlarge present accommodation.

Again I wish to commend the innumerable citizens and officials who have so ably assisted in the work of these Schools during the past year, and to thank you and all our department officials for perfect co-operation.

C. F. NEELANDS,

Deputy Provincial Secretary.

REPORT OF
TRAINING SCHOOLS ADVISORY BOARD

TO THE HONOURABLE H. C. NIXON,

Provincial Secretary.

SIR:—

We have the honour to present the tenth annual report of the Training Schools Advisory Board for the year ending March 31st, 1941.

During the year we have held 51 meetings at which 4,283 cases were presented. The record of each boy and girl in the Schools, or on parole under the supervision of the Schools, is reviewed every four months and more frequently when special attention is required.

The Training Schools of the Province are not penal institutions and should be looked upon as training, re-adjusting and educational in their function.

Upon entering a Training School each pupil is given a thorough physical examination, including tests for diphtheria, scarlet fever, and vaccination against smallpox. A tuberculin test is also given, and if this is positive it is followed by periodical x-ray examination of the chest. Mental examinations are given in each case, and these prove of great value in determining specific requirements in the training and education of the individual pupil.

The academic and vocational work carried on in the Schools is subject to regular inspections of the Department of Education. The reports presented by the inspectors show that the work in our Schools is conducted strictly according to the regulations of the Department of Education, and proves to be fully up to the standards prevailing in the Public and Separate Schools of the Province.

The policy of early return to the community, as recommended from the survey of pupils made last year has been pursued and an increasing number of placements are made at an earlier age than formerly.

The Board repeats its opinion expressed in former years, that there is a definite need for an institution for delinquent defectives. These children are utter misfits in our Training Schools and the Board does not approve of admitting them in any instance, but in some cases they are committed by the court when nothing can be done, except to attempt to have them transferred to the Ontario Hospital School, Orillia.

It is obviously difficult to maintain a proper training programme when the mental rating of the children ranges from 40 I.Q. to 120 I.Q. and it is felt that the Schools should be relieved of the defective group.

During the year 16% of the new pupils received in the Training Schools were mental defectives, and at the close of the year a total of 17% of all pupils in residence were mental defectives.

The Board believes that cases of severe chronic illness, such as incurable diabetes should not be admitted or committed to the Training Schools, owing to the specific difficulties in the care required by such cases.

The Board follows the policy of paroling pupils from the Schools as soon as possible, and recommends that not more than one ward of a Training School shall be placed in any one home at one time.

It is understood that a child goes to a Training School because of failure in social adjustment and as soon as it is believed that he can take his place in the com-

munity it is advisable to continue education and work there, rather than have him remain in the School. The value of home life is stressed, and if the child's own home is unsuitable then every effort is made to find a desirable foster home at the earliest possible moment. In order to secure a good adjustment, it may even be that more than one foster home has to be tried.

Nine per cent. of those at present in the Training Schools are children under the age of twelve, and our efforts to return them to some form of normal family life as soon as feasible will be continued.

Older boys and girls who may not return home have positions secured for them, thus enabling them to become self-supporting. This requires constant supervision by the Placement Officers, and in many instances continual contact is necessary. Reports from these Officers must be approved by the School Superintendent and submitted to the Board to ascertain that such placements continue to be satisfactory.

Owing to present conditions and the scarcity of help, there is considerable demand for our boys and girls, and as a consequence a goodly number have been placed in carefully selected homes, factories and plants. Sanction was given at a recent board meeting in which four boys and one girl were placed in munition plants, earning from \$2.00 to \$4.00 per day. There is a recent case where a sixteen year old lad was placed at wages of \$72.00 per month and board, out of which he is sending his mother \$50.00 per month. Another lad of sixteen paroled to his own home recently is earning \$30.00 per week. The Superintendents of the Training Schools have been requested to encourage every boy and girl to save a portion of their wages.

In previous reports the Board has recommended that serious consideration be given to the possibilities of establishing more Juvenile Courts throughout the Province, and we again wish to draw attention to this matter. In the cities where Juvenile Courts are established, the co-operation of voluntary social agencies is of great help. There have been cases of boys and girls who were finally committed at fourteen and fifteen years of age, whose delinquency record would have justified them being sent to the Training School earlier than their eventual commitment, and would probably have resulted in a much earlier re-adjustment.

The rehabilitation of Indian boys and girls continues to be a problem. As it is considered that Indian juvenile delinquents should receive training in Indian Schools, your Board again recommends that suitable arrangements be made between the Provincial and Dominion Governments to permit all Indian delinquents to be transferred from the Provincial to the Dominion authority.

The Board is pleased to know that a new school with increased accommodation and more extensive premises is being erected by St. Mary's Training School.

The Board regrets that Mrs. H. P. Plumtre, who had been an active member of the Advisory Board since its inception, found it necessary last winter to resign owing to the pressure of Red Cross war work. To fill the vacancies caused by the resignations of Mr. C. L. Burton, former chairman, and Mrs. Plumtre, two new members were appointed,—Mrs. William West and Mr. Charles D. Gordon.

GEORGE W. HAMBLY, *Chairman*,

CHARLES D. GORDON.

REPORT OF THE ONTARIO
TRAINING SCHOOL FOR GIRLS, GALT, ONTARIO

APRIL 1, 1940 TO MARCH 31, 1941

During the past year, one hundred and six new girls have entered the School. Comparison with the three preceding years shows a consistent increase of approximately twenty admissions a year. Four small dormitories have been constructed in the cottages to help cope with this increasing population.

ACADEMIC

The junior classroom is made up of the public school grades up to and including grade VII. There has been an average of thirty girls a month in this room during the past year. As a majority of these girls fall in the borderline and dull normal intelligence groups, many of their activities are of an auxiliary class nature. Girls who have been school problems before their admission settle happily into the congenial atmosphere of this group.

VOCATIONAL TRAINING

The older girls who are preparing to return to the community as wage-earners, receive training in one of three vocational groups: the kitchen group, the power-operating group, or the laundry group. Each girl's interests and aptitudes are considered before she is allotted to a group.

There is a kitchen group in each cottage under the supervision of the dietitian. These girls receive practical training in the preparation and care of food, and every well-cooked meal enjoyed by girls and staff is a source of satisfaction and pride to them.

This year the major project of the power-operating group has been the making of brightly-coloured playsuits for each girl.

The girls in the laundry do the personal laundry and some of the household linen for the School. The quiet routine in the laundry appears to have a therapeutic effect on some of the more unstable girls. Many who enter the group rather reluctantly become enthusiastic workers.

During the year ten girls, two at a time, were employed in caring for the chickens. This work requires initiative and a sense of responsibility, and is particularly suited to the type of girl found occasionally in every group: the energetic, outdoor girl who finds housework exceedingly boring during adolescence.

Another coveted position is that of dental assistant. This girl is responsible for the care of the dentist's office and equipment, and helps the dentist while he is at the School.

EXTRA-CURRICULAR ACTIVITIES

Every girl spends certain periods each week in household science, sewing, singing, and gymnasium classes in addition to her regular group or school activities.

New gymnasium equipment installed this year has greatly stimulated the interest in physical education. Each girl has ample healthful exercise in the regular periods and in group games. During the spring and summer months, the girls swim twice a week in the Y.M.C.A. pool in Galt.

Their evenings are spent in general cottage activities or hobby groups. The aim is to develop healthy, leisure-time habits, which may be valuable to the girl when she re-enters the community.

REPORT OF WORK DONE IN LAUNDRY DEPARTMENT

Number of girls in group throughout year	67
Number of articles of girls' clothing.....	21,820
Number of articles of staff clothing.....	2,316
Number of articles of cottage linen.....	18,336

MARGARET NICKERSON,

Supervisor.

REPORT FROM SEWING DEPARTMENT

- (1) 290 Cotton crepe nightgowns.
- (2) 137 Twinkle cotton playsuits in various colours.
- (3) 10 pr. Flannelette pyjamas.
- (4) 111 Factory cotton butcher aprons.
8 Twinkle cotton aprons (white) for Home Economics.
- (5) 22 Cotton housecoats.
- (6) 2 Dresses.
1 Blouse.
- (7) 24 Pot-holders.
- (8) 18 Laundry-bags.
- (9) 22 Place-mats, hemstitched all round.
- (10) 16 pr. Curtains. Home Economics curtains had three rows of rickrack braid sewn on down one side and across the width of curtain.
14 pr. Tie-backs, also trimmed with rickrack.
- (11) 12 Cushions, 6 large and 6 small, made for Mae Martin Lodge.
- (12) 1 Slip-cover, made for English lounge chair for Mae Martin Lodge.
- (13) 53 Alterations on spring coats.
50 " " winter coats.
112 " " dresses.
5 " " housecoats.
3 " " slips.
- (14) Afghan—was made of 7" squares, woven in wool and sewn together. Finished, it measured 54" x 72".
- (15) Mending: (a) 20 Kitchen aprons (Straps patched and re-stitched).
(b) 48 Kitchen, laundry uniforms (Sleeves replaced, hems shortened).
(c) 1 Tunic mended.
(d) 16 Sheets—turned and hemmed.
(e) 23 Bedspreads.
(f) 86 Pillowcases (Seams stitched).
(g) 28 Bathtowels (Patched).
(h) 49 Facecloths (Patched).
(i) 16 Linen facetowels.
(j) 15 Linen tea-towels.

- (k) 2 Shower-curtains.
- (l) 3 Serviettes.
- (m) 1 Place-mat.

O. A. PALADICHUK,

Supervisor of Sewing Dept.

SUMMARY OF MEDICAL WORK

During the past year the health of the girls at the Ontario Training School for Girls, Galt, has been good. All new admissions have had complete physical examinations, and any medical or surgical defects treated as required. Many cases showed marked physical and other improvement after such treatment.

During the year, there have been five cases of scarlet fever, one of whom was ill the day following her admission.

MADGE E. BREWSTER JEAN D. MURRAY

Respectfully yours,

BETH CARSCALLEN,
Superintendent.

REPORT OF THE ONTARIO
TRAINING SCHOOL FOR BOYS, BOWMANVILLE

APRIL 1, 1940—MARCH 31, 1941

The movement of population remained practically the same as the previous year. The smaller number in residence during the Fall season permitted the closing of one cottage long enough to paint the interiors of the other four cottages. The closed cottage served as a "spare".

The usual regular inspections have been carried out respecting buildings and equipment, safety, water and milk, power plant, dairy herd, academic and vocational education.

Many of our ex-pupils are in the armed forces. The list has steadily grown and now numbers one hundred.

ACADEMIC DEPARTMENT

The academic staff's personnel was changed during the year. Two members who obtained leave of absence were replaced.

The allotment of classes was altered slightly. The new arrangement called for each teacher to have at least two grades to teach. The course of study was followed closely. Visits of inspection were paid by the local inspector who reported encouragingly on the work done in this department.

During the year the average number of pupils in the different grades was as follows:

Auxiliary	16
Primer	1
Grade 1	1
Grade 2	5
Grade 3	11
Grade 4	14
Grade 5	28
Grade 6	29
Grade 7	35
Grade 8	23
Grade 9	14
Grade 10	3
Grade 11	2

The average number of boys attending school the full day was 45.

The Entrance results were again encouraging. Thirty-one candidates of thirty-five writing, received certificates. The four failures included only one who had attended the School any length of time. The most successful Summer School yet held was that of last Summer. This was arranged for the smaller boys not included in vocational work. The general programme for this was from 8:45 a.m. to 4:45 p.m. five days a week and 8:45 a.m. to 11:45 a.m. on Saturdays. Each morning was spent in the classroom and each afternoon, weather permitting, found the spot which is commonly known as "The Cedars" an animated scene until it was time to go "up the creek" for a swim. The academic staff, with the addition of a counsellor, conducted the Summer School.

Health, art in all its branches, English, music, social studies and nature study were dealt with theoretically in the mornings and practically in the afternoons. Special programmes including contests and treasure hunts were held frequently.

As in former years several entries were made in the Durham County Music Festival held in Bowmanville. Besides receiving very helpful and complimentary remarks from the adjudicator, those competing were successful in being awarded bronze medals in classes for unchanged voices, tenor, baritone, and 'teen age. A silver medal was awarded in the bass section and the school placed first in the duct for unchanged voices competing in a field of forty entries.

As an outside teacher of instrumental music was not available this year, the work was ably continued by two members of our academic staff. Forty-eight boys received training in the rudiments of music and the playing of band instruments and violins. Interest was high and a large waiting list supplied new pupils to replace those sent out on placement.

Monthly variety programmes were held during the Winter. These uncovered the usual amount of talent. A solo festival to find voices suitable for festival work took place in the auditorium.

Talks on current events were given by senior boys during the year at the daily chapel service.

During the past year there has been an increase in the circulation of library books to the several cottages. A greater stimulus for reading has apparently been created. Groups of twenty-four books are sent weekly to the cottages. Many books were repaired. During the year 49 books valued at \$22.24 were added to the library. The total number of books now in the library is 2,779.

PHYSICAL TRAINING DEPARTMENT

Over a period of years we have been steadily building up a programme in physical education to meet the special requirements of our special kind of school. Instruction and organization are so applied that each boy finds learning and competition at that level which is best suited to his capabilities. As he progresses there are definite steps which provide an ever increasing incentive.

It should be known that most boys come to us totally lacking normal play background. So we start with the earliest rudiments. The boy is taught to stand correctly and to walk smartly. Through marching exercises, general calisthenics, and a thorough training in elementary skills, the boy develops muscular control, poise, rhythm, timing, and self assurance.

Two periods of one hour and fifteen minutes each are devoted to physical training every morning and afternoon. There is a further period which is purely recreational each day after school hours.

During the summer months, evenings are turned over entirely to organized sports, as are Saturday afternoons and holidays throughout the year.

At no time are we without some organized league sport. Leagues are formed in various major and minor series to accommodate all stages of development.

Some time ago we adopted a form of draft, whereby any team may put in a claim for a player in a league of lower classification. Newly admitted boys are claimed in this manner. Results have been good and the draft is now a permanent fixture. Draft forms, as illustrated below, are readily obtainable and must be properly filled in before any claim is recognized.

DRAFT FORM

Player's Name.....Claimed by.....

League From League

To replace(Released, Graduated, Claimed, Ineligible).

(Signed).....

Each team may claim one player each week. Teams with poorest records have first choice when two or more claims are entered for the same player. Players who improve earn promotion. Players are kept on their toes due to the possibility of demotion. Losing teams strengthen and interest is maintained. Team captains develop executive ability. Minor series games are "scouted" and interest increased both ways.

Competition against outside teams is never stressed since our programme allows no time for the special coaching and practicing of representative teams. Yet when teams are picked for the occasional game they invariably do well. Eight games of basketball were played against the Bowmanville High School; our team winning four and losing a like number. In hockey two games were played, again with the local high school team. We lost one and tied the other.

The Leaders' Corps meets one night weekly and offers a course of advanced training, largely in heavy apparatus, for boys who apply themselves particularly well to the work and who show certain qualities of leadership. This is one organization that we would not care to do without. The leaders exert a steadying influence throughout the School. They are the ones who set the pace and by their general attitude promote enthusiasm among the entire group. The average strength of the Leaders' Corps is thirty boys. There are frequent changes in personnel as boys leave the School and others come up through the ranks to take their place.

A major project last Summer was the construction of permanent wings at the dam. This dam provides excellent facilities for outdoor swimming in the creek that flows through the School property.

Instruction in the Gymnasium.

The following work was covered in the regular periods of instruction: marching tactics, marching exercises stressing posture, poise, rhythm, timing, relaxation, Danish fundamental and corrective exercise, apparatus work on the horizontal bar, parallel bars, side horse, long horse, mats, ropes, skill drills, playing rules, system of play in hockey, basketball, football, rugby, touchball, softball, volleyball, track and field athletics and stunts and group games.

Instruction in the Swimming Pool.

Instruction and drills in leg stroke, arm stroke, breathing, timing, rhythm, relaxation, racing start, racing turns, in the following strokes: (a) Crawl (b) Back (c) Breast (d) instruction and training in springboard diving (e) diving to recover weighted, submerged object (f) general training for muscular development and stamina.

Championships and Special Events.

Annual swimming and diving championships—18 events, senior and junior—38 boys competed in the preliminaries—29 boys competed in the finals.

Annual gymnastic championships—135 boys competed in the first round tests on four pieces of apparatus—27 boys took part in the semi-finals—13 competed in the finals.

The outdoor demonstration in physical training was again considered an outstanding event. There were eight numbers on the programme with 106 boys taking part.

Organized League Sports.

Softball—June league—18 teams in 4 graded sections—181 boys—96 games.

Midsummer league—18 teams in 4 graded sections—193 boys—168 games.

Total number of league games—264.

Football—12 teams in 3 graded sections—162 boys—57 games.

Basketball—Fall league—12 teams—67 boys—24 games.

Winter league—20 teams in 5 graded sections—149 boys—20 games.

Spring League—15 teams—92 boys—64 games.

Total number of league games—108.

Hockey—20 teams in 5 graded sections—149 boys—48 games.

AGRICULTURAL REPORT

General Farm Conditions.

There was sufficient rainfall throughout the season to produce good crops on the School Farm.

Some of the hay was injured at harvesting time by too much rain but plenty of good hay was harvested and stored to supply all our requirements.

The grain crop generally was of good quality and well up to the average in yield.

Corn, mangels, turnips and all garden crops were exceptionally good.

Two shipments of surplus potatoes and vegetables were made to the Girls' School at Galt.

*Practical Agriculture.**Farm Apprentices.*

One hundred and twenty-nine boys were assigned to the farm for training during the year.

These boys were all taught farm work by actually doing it from day to day. They were divided into three groups each group working with an experienced instructor. The boys on the groups were changed monthly so that they would all get experience in livestock, dairy and poultry work as well as garden and field work.

By this method they learn to do all the seasonal jobs arising on the farm from month to month and at the end of their stay here, they have become trained and useful farm help.

The boys are taught to milk, care for livestock and poultry, harness, hitch and drive horses, work with farm implements and generally get a good working knowledge of practical every day farm work.

They also hoe, weed and work in the garden, help spray the orchard and help plant and care for the fruit and vegetable gardens.

Sixty-three boys were placed out on farms in the Province during the year on wage contracts. In addition to these, there were quite a number of junior boys placed in farm boarding homes to attend school. These boys with some farm training here were useful chore boys.

Vocational Agriculture.

The boys in the Entrance Class had one period a week during Fall and Spring and two periods in the Winter in the classroom study of the following subjects:

Livestock.

Breeds and breed characteristics.

Care and management of farm stock and poultry.

Dairying.

Production of sanitary milk.

Milk testing and R.O.P. work.

Daily weighing and recording of milk of each cow in herd.

Soils.

How formed, classification, maintaining fertility, manures and fertilizers to use.

Field Crops.

Grain and hay crops.

Value of legumes on the farm.

Seeding, harvesting and storing of farm crops and vegetables.

Rotation of crops.

Rope Splicing.

Practice in making long and short splices.

Making up rope halters.

Attaching rope shanks to halters.

Forge Work.

Welding.

Making angle iron braces and brackets.

Sharpening harrow teeth.

Making and threading new harrow teeth.

Holstein Herd.

Official record of performance work was carried on in co-operation with the Department of Agriculture, Ottawa. Seven cows were entered in the R.O.P. during the year. Some of these have not completed the full period at the time of writing. The records of those completed are as follows:

Herd No.	Class	Days Production	Pounds of Milk	% Fat
2	Mature	365	16,488	3.8
21	2 yr. old	365	13,208	3.4
23	2 yr. old	365	11,068	4.1
3	Mature	365	11,206	3.6

The herd is fully accredited and blood tested and numbers twenty-four, headed by a sire of good type and breeding.

We are raising sufficient heifer calves from our best cows to take care of all replacements that are necessary to keep the herd up to full strength. A very creditable herd is being built up on the farm both from the standpoint of production and breed type.

Poultry.

Four hundred chicks were purchased and a flock of four hundred hens are maintained on the farm. The boys get experience in brooding and raising chicks and in the care and management of laying hens. A plentiful supply of eggs is always available and table birds for the school requirements.

Farm Improvements.

A concrete abutment was built along west side driveway leading into the dairy barn and the driveway graded, levelled and gravelled.

Door cut through wall into dairy barn basement and an exercise yard built on the north side of the barn for the herd bull.

New ventilators were built on the piggery to help eliminate dampness.

All interior walls and partitions in piggery painted.

Walls and interior of dairy painted.

Wash basin installed in dairy.

Farm tractor with tractor plow, cultivator, and disc harrow added to farm equipment.

FARM PRODUCTION REPORT

Feed and fodder	\$2,182.00
Garden and orchard	1,432.40
Livestock, dairy and poultry	5,910.79
Hay sold	81.00
Seed cleaning	11.40
Old farm implements	60.00
	\$9,677.59

HORTICULTURAL REPORT

The Horticultural Department is responsible for the care of the grounds, landscaping and greenhouse work. The grounds and boulevards are fairly extensive and require considerable work during the Summer season. There are twelve acres of lawns and boulevards to cut with lawn mowers; the perennial borders, rockeries, shrubbery and flower beds, to plant out and keep in order.

Landscape Work.

An area in front of the skating rinks was levelled and seeded.

A section of the North play field was graded and levelled. This added an additional football field to the play grounds.

Sodding was done around the Dining Hall and Kiwanis Lodge to protect walls and make it easier to keep it clean and tidy.

The shrubbery was thinned out around all the buildings and re-arranged. The shrubs removed were placed where needed around the grounds.

Additional planting was made in the perennial border. Many clumps of perennials were divided and used to fill in vacant spaces in the border and rockery.

Greenhouse Work.

In the greenhouse a considerable number of boys can be kept busy throughout the Winter season when outside jobs are scarce. The building is also used to start all the early vegetable plants for the School garden and the annuals and potted plants for the flower beds.

Four thousand early vegetable plants and eighteen thousand annual flower plants for bedding purposes were started in the greenhouse during the late winter and spring season. These all required to be transplanted twice, once in the flats and then into the open ground.

Horticultural Apprentices.

Seventy-one boys were assigned to, and worked on the horticultural group during the year.

Each boy had a small section of a bench in the greenhouse where he would propagate and grow flowers from cuttings and seeds. He was responsible for the care of this section himself.

In the growing of the vegetable and bedding plants the boys get good practice in repotting, transplanting and setting out plants in the beds and borders.

REPORT OF GENERAL MAINTENANCE DEPARTMENT

This department carried on a varied program of activity, including building repairs ranging from extensive masonry work to artistic redecorating of the interiors. In the general shop program we have carried on all types of work common to the general repair shop, and in addition considerable sheet metal work.

Redecorating.

Completed painting of four large dormitories in three harmonizing colors; the tile and locker rooms of two cottages; three rooms and the area leading to the basement of the dining hall, and the pasteurizing room; the upper halls and the outside of the hospital. The kitchen, rear porch and steps of the superintendent's residence were also painted. In addition to these, all fire hydrants and manhole covers, interior of piggery, interior of skating hut, farm sleigh and several wheel barrows were painted.

Sheet Metal Work.

Repairs to brooder stove, milk pails, water pails, fly sprayers, separator bowl and milk cooling tank for the farm. Making of smoke pipe for the furnace in the herdsman's cottage, the brooder stove, the cook stove in the piggery, and hot air ducts for the furnace at the Somers' farm. Manufacture of three dozen water pails, two garbage cans, twelve water troughs for the chicken houses, new cover for the cook stove at the piggery, radiator cover for the kitchen; humidifiers for radiators in hospital, 12 flower pot holders for South Lodge, new hopper for the

potato planter, new strainer tank for potato peeler and metal flashing for the piggery roof.

Making and installing ventilator stack for pasteurizer room, soldered repairs to water pails, watering cans, insect sprayers, etc., and pipes and fittings for pasteurizer equipment.

General Shop.

Forging tractor hitch for road drag, truss rods for boiler repairs, special eye bolts, tractor hitch for binder, and heavy braces for barn doors. Repairs to farm wagons, potato spraying machine, gang plow, and large cast iron kettle for piggery. Overhauling and keeping lawn mowers in condition, and assembly of new mowers. Machining thrust washers for Hobart mixer, turning and fixing new bronze bushings and pistons for hydraulic pump in power house. Making fixtures for bending wire coat hangers and making up 500 hangers. Re-building Hobart potato peeling machine, sharpening skates and scissors, turning guidebars for Detroit stoker, reseating valves for pasteurizer pump, making plates and anchor bolts for window closing mechanisms. Replacing sagged bed spring fabrics with new fabrics. Building a new snow plow and necessary frame to carry it for the school truck. A ventilating fan was installed in the pasteurizing room, and in addition something over 500 welding and brazing operations have been effected on equipment from the power house, farms and other school departments. We have fabricated two coal chutes and hopper covers, fire rakes and hoes, custodial screens, etc., by welding.

General Maintenance.

Considerable repairs were necessary to plaster walls in the dormitories before re-decorating, also replacements to broken floor and cove base tiles in cottages. Concrete walks were laid at the south side of Kiwanis Lodge, new walks and door sills east of dining hall, new walks and door sills at north entrance, and door sill, masonry repairs and concrete slab at basement entrance at dining hall. Erected a reinforced concrete retaining wall with a welded iron pipe railing at the north side of Darch barn.

Considerable work was necessary in levelling off a new section of play field and in landscaping the area on either side of the Darch Lane. This work along with the concrete work made it necessary to haul large quantities of earth for fill and sand and gravel for concrete. In addition to this, the heavy snow fall of this winter made it necessary to keep the snow plow busy on many occasions.

An interesting variety of practical repair and construction projects provided useful occupation for the woodworking and carpentry workers as follows: Building of poultry shelters and feed hoppers, a door for North Cottage, benches, book shelves and wardrobe. Turning of six dozen baseball bats, chisel and file handles, ornamental spheres for front entrance; repair and refinishing of School desks, games, equipment, chairs and dressers; overhaul, refinish and fitting of new tops to dining hall tables; making new handles for lawn mowers; repair and repainting fly screens; glaze, fit and hang storm sash on cottages, etc.

The Shoe Repair Department made repairs to 1,049 pairs of boots as well as rubbers, rubber boots, baseballs, belts, leather coats, hockey boots and slippers.

Hobby Work.

The development of hobbies occupies a large portion of a boy's leisure time

during the Winter months. Impetus is provided by the knowledge the best projects may be entered for competition in the Annual Lions Club Hobby Show held in the town of Bowmanville. It is gratifying that nearly 100 prizes were awarded Training School entries.

The entries showed a wide variety of interests as follows:

Art—posters, greeting cards, murals, pencil and ink sketches, stencils, silhouettes, still life studies, and penmanship.

Collections—stamps, scrap books, wood samples.

Construction—bird houses, puppets, planes, boats, and kites.

Domestic Art—embroidery, cork work, weaving, cushion tops, needlework, knitting and darning.

Cookery—candy, cookies, tarts, biscuits, and cakes.

In addition to the above group, projects were entered from cottages and academic classes.

REPORT OF PLACEMENT DEPARTMENT

Boys receiving supervision at beginning of period.....	471	
Boys discharged during period	290	
Boys re-admitted to the School	69	
Boys released from guardianship	168	
Boys employed on farms	66	
Boys attending Public School	163	
Boys attending Secondary School	20	
Employed in factories	54	
Employed as messengers	27	
Employed as salesman	1	
Employed as bakers	2	
Employed at shoe repairing	1	
Employed as gardener	1	
Employed at miscellaneous work	38	
Unemployed	13	
Boys in Mental Hospitals	11	
Boys in Sanatoria	1	
In other institutions	84	
In Toronto General Hospital	1	
Whereabouts unknown	37	
Employed on railroads	2	
Employed as hospital orderlies	2	
	761	761
Boys discharged during the period.....	290	
Placed in foster homes.....	85	
Placed on farms	62	
Placed in Working Boys' Home	30	
Home to attend school	24	
Home to seek employment	65	
To other institutions	24	
	290	290

Boys under supervision end of period	524
Number of visits to boys	2,351
Homes investigated	237
Attendance at Clinics and Social Agencies.....	108
Attendance at Court	18
Other contacts	83
Total number of boys in paid homes at the end of year.....	142

HEALTH REPORT

Dental.

Number of patients at clinic.....	1,010
Examinations only	552
Patients treated	458
Number of extractions	206
Number of local anaesthetics (nerve block)	162
Number of fillings	1,012
Number of pyorrhoea treatments	6
Number of prophylaxis	357
Number of other treatments	21
Number of porcelain crowns	6
Number of bridges	1
Total number of operations	1,771

Medical.

Operations:

Tonsillectomies	39
Circumcisions	4
Appendectomies	3
Hernioplasties (1 double)	3
Amputation of finger	1
Aggregate attendance at sick parade	3,885
Boys seen at clinic	1,884
Physical examinations, new boys	200
Physical examinations, re-checks	538
Boys seen while patients in Hospital	1,460
Tuberculin tests	354
Smallpox vaccinations	49

Several fractures and smaller injuries were treated, and are included in the above figures.

Social Work Agencies.

During the year much assistance has been rendered by various social work agencies throughout the Province. Children's Aid Societies have given generously of their time in the preparation of reports on the suitability of homes and have aided materially in the supervision of boys on parole.

The Big Brother Movement operates in two Ontario Cities, namely, Hamilton and Toronto. Boys committed to our School from these centres have in most cases been under Big Brother treatment previously and these organizations renew active contact after the period of training is completed and the boy returns home. Pre-

Parole Conferences are arranged by the Big Brothers in both cities. All social work agencies which have been interested in the boy whose parole is being considered are represented at the conferences. A report typical of Big Brother work is shown below. These figures are for Toronto:

Attendance at 12 monthly conferences.
Reviewed 92 cases.
Investigated 68 homes.
Assist in supervision of 33 boys.

The Working Boys' Home in Toronto provides an excellent outlet for the placement of older boys whose own homes are not suitable and who are not placeable in rural employment. Here, adequate lodging at reasonable rates, and much needed supervision are provided. Employment is found and boys work out during the day in various occupations. Most boys capable of further education are enrolled in night school courses. Nearly fifty boys have been assisted by this commendable institution in the past year and at the end of March thirty-five were still in residence there.

A. R. VIRGIN,
Superintendent.

REPORT OF ST. MARY'S
TRAINING SCHOOL FOR GIRLS, TORONTO

APRIL 1, 1940 TO MARCH 31, 1941

Writers of prose and of poetry through the Elizabethan era and onward, often invoked the aid of natural forces or of beauty when they put pen to paper. With dramatic intensity they called upon light, heat, music or song for help to make their inward vision perceptible to others. No doubt the multitude of images which clamoured for expression make selection confusing. It is more or less comic to measure the intellectual giants of that period as we start to gather facts for our present lowly and obscure history. We look up to them, however, and though we cannot achieve the stature of the giants we can, at least, build to the height of the pygmy. The essential is that we build. Not lack of material delays the pen but problem of choice.

At the end of March, 1940, eighty-one pupils were in residence. At the end of March, 1941, eighty-six were in residence. Thirty-six had been admitted and thirty-one had been dismissed. It would be possible to write at length about each one of the collective number. The reader would find sufficient human interest, a settled type blossoming into a diversity of characters and qualities. There were fewer children of Central European parentage. French-Canadians and Northern European races were in the majority. A younger average age was in evidence and delinquency followed the line of theft in more marked degree. Better intelligence was an outstanding feature of admissions. They are more shrewd, ruthless, keen, selfish, restless, than former groups.

Let us study the group as an unit and with the detachment of an observer. It is a surer method of avoiding practiced deceit, disguise, subterfuge. These children have suffered irreparable loss by missing the memories of family life, parents, brothers and sisters. When they look back, over a short road it is true, they are not remembering mother and dad, the sweetness and solace of home. Few among our pupils have such memories and to this may be attributed the unusual expressions which flit across countenances. One sees a hunger or a mental quest, a sadness or a bitterness, a doubt or an amazement, when, during readings aloud, a picture of family life is outlined. They must wonder what it would be like to have mother and dad equally loved and equally loving, a domestic group happy and contented in its own orbit.

The fact just mentioned is reiterent with teasing monotony. It is a significant fact. The cause of youthful delinquency and its excuse as well, may be assigned, largely, to this privation.

The lack of family ties with other causes contributing have produced a clearly defined difference between the pupils of to-day and the pupils of five years ago (even so short a period). To-day we train children worldly wise beyond their years, intelligent, vibrant, daring. The mental fibre is woven with little sentiment. It does not yield to pressure easily. This is an advantage to them when they are returned to society but it presents difficulties to present training. Authority is resisted, obedience is flouted, reverence is disdained. There is a notable lack of faith in Christian truths and a lack of love for religious duties.

Those wards who are under supervision astonish us by the calm audacity with which they face adjustment. They are quite intrepid, quite unperturbed. They look upon life as an adventure and they accept what it has to offer with high

courage. "I'm going to get by," is their slogan. They find assurance in their own vivid energy, their confidence in themselves. A troubled world does not enter into their reckoning.

The academic course showed good results. Fifteen pupils passed the Entrance examination and the High School classes were satisfactory. Few dislike school. There exists an eager desire to advance in educational lines. Because they have fewer distractions they have leisure to concentrate and the greater number love study, learning, the acquisition of knowledge. They absorb instruction. This attention produces a pleasantness and an industry in the schoolrooms. Teachers find consolation therein and pupils find peace of mind and heart.

Vocational and artistic training occupied all spare periods. Cooking and kitchen work take up a considerable time. The kitchen is large, well equipped, and the children prepare all the food for their own group. They weave fabrics, make rugs, knit sweaters, Sox, mittens, baby outfits. They learn the intricacies of tating, crocheting and embroidery with comparative ease, and these occupations are useful in themselves apart from the value of the finished commodity.

Handicrafts secure the attention of restless little girls who will spend long periods of silent effort in order to master a shuttle, a hook, or a cross stitch. They work in water colors, oils and crayons to their own satisfaction and the complacency of their friends. Artistic talent is found, sometimes, in the least artistic setting. When such pupils are encouraged it happens frequently that a change for the better is in progress on the lines of character building. They grow more womanly, more pliable, more disposed for companionship.

Recreations demanded wise and careful supervision. Space allowed for roller and ice skating, basketball, races, swings. Indoor recreations consist of music, dancing, games, cards, dramatics. All take part with enthusiasm. The moving pictures are had every month and this form of entertainment is popular. An ordered recreation is an aid to discipline and good direction.

Supervision was uneventful except for the persons actively concerned. Contact with the School remained even when there were minor infractions of the terms of parole. Domestic placement was found more satisfactory than other employment to start. Good and abundant food, a private and personal room, the home atmosphere were factors toward a sane and healthful adjustment. Incidentally, it enabled them to build up a suitable and a becoming wardrobe, so essential to the happiness and the comfort of teen age girls.

We thank God for having been spared all serious illness. A trained nurse, secular, has been added to the staff and this nurse is on duty eight hours each day. The medical specialists, to whom we offer our deepest thanks, were regular in service. All recommendations from the psychiatric were given careful attention and Dr. Hamlin gave unremitting and precise care. General health was good.

Our task ends with the reverent duty of gratitude. We thank every member of the Department under which our School operates for the kind and gracious assistance always given when we ask. We are more appreciative of this and more grateful than words can state. We thank, too, the members of the Advisory Board for the invariable kindness and wisdom they manifest in dealing with the problems of St. Mary's Training School.

We have the honor to remain,

Your obedient servants,

THE SISTERS OF THE GOOD SHEPHERD.

REPORT OF ST. JOHN'S
TRAINING SCHOOL FOR BOYS, TORONTO

APRIL 1, 1940 TO MARCH 31, 1941

Multifarious are the assigned causes of delinquency. Modern sociologists and psychologists no longer follow the tenets of Lombroso, who thought that all criminals are marked from birth to a career of crime, and may be readily detected by their stigmata of degeneration. Heredity is not now looked upon as a predominating factor in delinquency; in its stead environmental influences are held responsible for any deviation from the paths of rectitude. Trained workers stress the influence of the home, the potent power for good of the father and mother, the need for kindness, for pleasant and useful activities, both in and out of the school, the role played by adequate recreational facilities and health, and the incalculable value of religion, which serves as a solace in misfortune and a curb in temptation.

A training school, such as St. John's, unfortunately cannot prevent delinquency, at least not directly. But its influence in smoothly and steadily re-adjusting the lad who may have slipped, is greater than we can readily estimate. All noxious influences are eliminated and those elements missing in the young delinquent's life, which are in part responsible for his present anti-social attitude, are deftly brought into play while he is in the training school.

First and foremost, the young lad admitted or committed to our care from the courts, generally comes with a grudge against society, and often with a deep resentfulness of his parents who may not have treated him with a deep sympathetic kindness, and the discipline which he badly needed. But at St. John's he is immediately accepted and no one questions what he has done. The past is forgotten,—what is important is the present, and most of all the future. The dark clouds soon roll away and the sun shines more brightly once his initial period of lonesomeness is over. Happiness in the school, in the limited fashion of course that it may be achieved, is essential. No one who visits the school can doubt for a minute that the lads are happy. Their smiling faces, their eagerness to co-operate and their genuine interest in all that pertains to the school is an index of the joy that pervades their life. In the stimulation of such a happy attitude the personnel is of the utmost importance. At this point I wish to convey my gratitude to my fellow workers, to the Reverend Chaplain, to the Brothers who labor so well and so zealously, to the men who are in charge of the shops and to the skilful professional men of the medical services. The heart of the school, and the predominant factor in its success is found in this competent and devoted body of men working in closest unison.

An essential feature of re-education, and one most tangible in its results, is the health of the boys. Careful preliminary examinations, prior to his entry, are made either in the boy's home town, or at the Toronto Psychiatric Clinic, under the guidance of Dr. E. P. Lewis. Frequent and meticulous examinations by our house physician, Dr. J. J. Hurley, supplemented by visits when necessary to St. Michael's clinic and hospital, soon succeed in restoring the boy's health, when it is not up to standard. In this connection the following tabulation is presented:

TABLE 1

Spinal meningitis	2	Cleft palate	1
Tonsillectomy	8	Kidney treatment	1
Circumcision	12	Tuberculin test	131
Fractures	5	Appendectomy	3
Surgical treatments	18	Glasses supplied	3
Hernia	1		

The dental care of course is important. We are fortunate in having the services of Dr. W. H. Godsoe, who for a number of years now has been so generous in his time and services. Dental services during the year were as follows:

TABLE 2.

358 boys were examined at 44 clinics.	11 Cement fillings.
202 Amalgam restorations.	1 Gold inlay.
53 Synthetic procelain.	5 Partial dentures.
183 Extractions.	2 Complete upper dentures.
40 Treatments.	13 Surgical extractions.
	5 Removals of nerves.

The average boy, however, is of sturdy physique and is not in need of specialized medical care. He craves vigorous and healthful activity, and at St. John's this is forthcoming in abundance. All are encouraged to play; soon even the veriest tyro acquires a skill and zest for sport that often elicits the admiration of those who see our boys on the athletic fields. The best of the athletes participate in regular city league games. For some years now they have carried off more than their share of championships in hockey, in lacrosse and in baseball, and the teams from St. John's are always a factor to be reckoned with when the play-offs come around. We at the school look upon this participation in city leagues as one of the best influences in the re-orientation of the boys socially. They are proud to play for the school, and their conduct is always beyond reproach. This is not to be wondered at, for they must satisfy rather rigorous requirements which have nothing to do with athletic ability before they can become members of the various teams. Fortunately we have in our Athletic Director, a man whose outstanding success in coaching is due fully as much to his popularity with the boys as to his long experience.

It must not be thought that attention is centred solely on the cream of the athletes. They attract some attention it is true, but the essence of the athletic program is complete participation by every boy in the school. This is done, not merely from the standpoint of recreation, and of health. In competitive sport our boys learn to become skilful and self reliant, to merge their efforts with those of the group, and to curb their tempers. In our school, particularly, where we do not enjoy the broad acreage that is the pride of many a school, with the consequent agricultural activities that are so helpful mentally and physically, we must seek some other means of using up surplus energy and of developing character and initiative. It is our intensive sport program that permits us to do this, with what we are pleased to thing, a fair modicum of success.

But one must not imagine that all is play at school. Day in and day out, the normal routine of class and shop sobers our lads and teaches them to earn their

way in this work-day world. A great part in the rebuilding of the characters can be ascribed to these daily activities. Steadfastness of purpose, reliability, industry and skill, are the objectives, and in most cases satisfactory attainment of these objectives is achieved.

Finally religion is paramount in character rebuilding. The disciplinary value that it entails is important; but far more important is the solace that it brings in the dark moment of discouragement; and for boys who have fought through embittered defeat how often do they occur? Religion stresses the fact that they are personally responsible to themselves and to God for their conduct. In a subtle but powerful way it dispels a fatalistic view that they are but drifting powerlessly in a cruel and malignant maelstrom of evil for which they are in no way responsible, and substitutes the philosophy of personal responsibility and moral worth. Without the influence of religion, all rehabilitation of our boys would be a dreary and vain task indeed.

All these influences are moulded into a harmonious unity, but they do not obtrude themselves and the lad is not aware of them. What he perceives is kindness, activity and vigorous fun. Slowly and imperceptibly his character is moulded, and the good that is present in every lad no matter how wayward is bound to come to the surface. In the short time that he is under the influence of the school he makes tremendous strides, and more frequently than not, he is completely rehabilitated as a useful member of society.

The task devolving upon the staff of the school is an onerous one, and often has its moments of bleak disappointment. In these moments, the understanding and encouragement of the Deputy Provincial Secretary's Department is a reward for our endeavours and a stimulus to greater efforts.

May I draw to your attention two noteworthy occurrences of the past year. The Service Clubs of Toronto, and in particular the Beaches Lion's Club, have been particularly helpful to the school. They encourage us by their presence at our activities and recently in a more tangible fashion, by the presentation of a splendid and costly diving float. This summer should any of these gentlemen visit us during our swimming periods, we will be pleased and proud to stage an exhibition for their benefit, which may not be the last word in aquatic skill, but will certainly manifest in a boyish and exuberant fashion our gratitude.

And here we are proud to pay a tribute to our former medical director, Dr. R. W. Boyden, who for years looked after our boys with a skill and devotedness beyond praise. He has enlarged the sphere of his usefulness and has left us to become Medical Officer of the Irish Regiment of Canada. We thank him for his many kindnesses and admire him for his loyalty to his country. With him at Camp Borden are many of our former pupils who have proudly joined His Majesty's Service.

Sincerely yours,

BROTHER STEPHEN,
Superintendent.

REPORT OF ST. JOSEPH'S
TRAINING SCHOOL FOR BOYS. ALFRED, ONTARIO

April 1, 1940 to March 31, 1941.

Number in Residence, April 1st, 1940.....	119
Number in Residence, March 31st, 1941.....	130
Average Daily Attendance	116

Academic Report.

We have four groups of pupils, divided as follows:

Grades 8 and 9	16
Grades 6 and 7	17
Grades 3, 4 and 5	27
Grades 1 and 2	34

The organization of the school as far as the division of grades was concerned remained the same for the whole year. For the first time in the history of our school a regular class was organized for Grade 8, with full-time students. The matter of whether it was better to have the more advanced pupils work in the shops or do intellectual labour all way in the class-rooms was debated with the Advisory Board of the school, and we came to the conclusion that it was better for them to be in their respective rooms as long as possible. The New Course of Study was followed and the results obtained were on the whole satisfactory.

Singing lessons were regularly given in all the different groups, and several creditable performances have been staged by the pupils of all the departments. The entertainment given around Christmas was a special treat. The programme was varied and interesting, the behaviour and general bearing of the boys so satisfactory that the audience we invited for the occasion found the event exceptionally good and an excellent note for the institution. These musical and singing lessons were very useful not only as a training for the voice and ear, but were at the same time a great help in developing and maintaining the religious emotions in our boys. As a consequence of this work, we were often able to sing the different religious services in our chapel, and have the pupils participate in the singing, either of the High Mass or the Vesper Service, specially on the great feastsdays of the year: Christmas, Epiphany, Easter and Pentecost.

In each of the class-rooms, we stressed the necessity and encouraged the teaching of good and correct speaking, but unfortunately the pupils did not respond as much as they should have, specially when talking among themselves in the recreation and work periods.

In the lower grades, we employed for some time a regular teacher whose duty was to mind the backward boys and give them special reading lessons every day to permit them to catch up to the others and follow the general movements of their group. We received this year ten boys who didn't know a word of reading, and after some months of very careful work, they could read as well as the pupils of grades 1 and 2. All these boys are full-time pupils.

Much time was devoted to drawing in those grades, and the academic methods of conducting an Auxiliary Class were made use of with concrete material and images of all kinds.

We bought for this department twenty-five large wall-pictures bearing on religious subjects, and many other useful objects for intuitive teaching. As a hobby, those children liked to collect stamps, cut pictures from catalogues, paste them in their scrap-book and write the names, in French as well as in English, of the objects represented by these pictures. We also bought for these grades thirty-six "Drawing-Books", and once a week, Friday afternoon, the teacher concerned gave a very interesting lesson in colouring designs. We were much satisfied with the work done with those younger pupils, and we promoted twelve of them in September, 1940, at the reopening of the school year. All kinds of songs were taught to the pupils of this group. Every day, the teacher made the boys sing either a patriotic, religious, college or humorous song.

In grades three, four and five, we still have twenty-seven full-time pupils. The boys of this class have attracted the attention of the school and the many visitors that came to see their very interesting exhibition of drawing, specially the exhibition of black silhouettes mounted on glass and covered with cellophane. 500 models of all kinds were exhibited and 240 mounted on glass. When a pupil leaves the school, he is given one of these drawings to keep as a souvenir of his work in the drawing-class. Seventy-six wooden objects were also on exhibit there, models carved either with a jack-knife or other small carving tools.

The circulation of the library books during the past year was kept up as usual. Four boys are still in charge of delivering the books to the sixty-five pupils who are interested in reading supplementary books. They are allowed to change them daily if they wish. Occasionally, the children are invited to give an oral account of their reading. Most of the reading is done in class during the supplementary reading period set aside in the time-table for this subject, and also during recess, outside the class-room.

The school library contains over 500 English and French books. Moreover, the children are allowed to read the following periodicals: the Newsweek, the World Affairs and the Citizen. Those publications come regularly to the school and many boys enjoy the privilege of being permitted to read them. The pupils of Grades 7 and 8 are interested in collecting post-marks as a hobby, a very useful occupation for rainy days. Many of the boys have their own scrap-books, and work at their favorite pastime in their spare moments. Thirty pupils have taken this interesting collection as a hobby and are still working at it.

Religious Training.

Our endeavours are devoted to impress upon the boys the value of religion in life. We are aware that the main factors of delinquency are adverse home conditions and evil company; and many a boy comes to our school with little or no appreciation of things sacred. Fortunately, we are well equipped to look after their religious needs. Besides daily classroom instruction in religion, our Chaplain gives two formal talks a week on moral or ethical subjects. We inaugurated in September a very profitable course in religion for the benefit of the boys who work in the kitchen and in the dining-hall. As those children stay outside the classroom most of the time, they are thus prevented from enjoying the benefits given to the other pupils. This course is given once a week. In March, we organized a special retreat for all the children of the school. We had two missionaries, and the services were conducted and the sermons delivered in English and French, the boys being free to choose the language they preferred. As usual, we gave a

weekly lecture to the whole school, presided at three entertainments during which the examination results were proclaimed publicly in the presence of the boys, the staff and a few invited friends of the institution.

Due to the close co-operation between the Superintendent and all the members of the staff, those public celebrations were highly successful and greatly enjoyed by all. The feast of Christmas was celebrated in the usual way, and most of the gifts were donated by the friends of the school. Four boys were confirmed and made their first communion in our chapel. We bought a series of religious pictures to be used in the periods of ethical instruction, pictures three and a half feet long by two and a half wide, mounted on cardboard. Those pictures proved very useful for intuitive teaching.

In order to avoid boredom and tediousness, twice a week we say some of the prayers aloud, during Mass, changing them from time to time, for variety sake.

Health Report.

During the year the health of the boys in the school has been very good. There was no serious illness to report and there was nothing contagious. As usual, the pupils received constant medical care under the guidance of Dr. Tittley, and his directions were followed in every respect. Four cases of fractures, sustained during play, were attended to at once. There were three tonsilectomies, but no other operation during the current year. Our doctor made 62 visits and 353 examinations.

The school dentist, Dr. J. J. Kirby, from Hawkesbury, came to the institution once a week, on Tuesday morning, to give his professional care to our boys. He made 325 examinations, 249 fillings and 157 extractions. Repeatedly, he manifested his satisfaction at the way the pupils were taught to clean their teeth, and he found that the children needed very little medical attention after his first examination.

Summer Camp.

During the summer months of July and August, we organized a regular summer camp at Point au Chêne at the confluence of the Rouge and Ottawa Rivers, a distance of twenty-three miles from the school. Most of the boys were allowed to stay from two to three weeks at the camp if they wished and if their conduct had been satisfactory. We sent from twenty-five to thirty campers in each section from July 1st to September 2nd when we broke camp and resumed the scholastic work of the year. As this organization required many supplementary supervisors, we were fortunate enough to find twelve good men, friends of the institution, who were quite willing to devote a few weeks of their precious vacation months, either in the classrooms or in organizing games on the playground, a generosity which we highly appreciated indeed.

Physical Training.

From the standpoint of results obtained, the past year has been very satisfactory. The programme in physical education and organized sports was on the whole the same as last year's. Class periods followed a definite course and instructions were designed to train in skills as well as in fundamentals, and to prepare the boys for full participation in all sporting activities at the school. The

annual indoor demonstration in physical training was well attended and a very successful event.

We divided the gymnastic classes into four groups, as follows:

First Group	14 boys
Second Group	18 boys
Third Group	24 boys
Fourth Group	20 boys

Occasionally, specially when we received many new boys at the same time, we were compelled to organize a temporary fifth group until the new-comers had developed sufficient skill in the fundamentals to be able to catch up to the other groups.

Here are some of the points covered in the periods of instruction: Marching tactics, corrective gymnastics, apparatus work on the horizontal bar, side horse, long horse and the sword dance.

During winter, we had two rinks at the disposal of the boys, and they had a very enjoyable season, playing games either on our ice or on outside rinks. We organized twenty-three different hockey teams among the boys and 234 games were played. The main teams were the Speed King which competed with the different teams of the Ottawa River Shore Hockey League, and the Saint Joseph that was made up of players under seventeen. The Speed King won the Mercil Trophy, playing against La Salle Academy team, Ottawa. In the summer, baseball was very popular with the boys, and as most of the games were played on our ground, great interest was evidenced by our neighbours who regularly thronged to our park to see our boys perform and thus stimulate them to greater effectiveness.

A few years ago, the boys, working under an instructor, constructed a dam and dug a good swimming pool in the creek which flows through the school property. During July and August, those boys who were not sent to the camp enjoyed two swims a day, one in the morning and one in the afternoon. This outdoor pool afforded excellent facilities for instruction and training in springboard diving, swimming strokes and general training for muscular development.

At the annual demonstration of gymnastics, the orchestra of the institution made up of thirteen players accompanied the marches and dances on their instruments, consisting of mouth organs, clappers, guitar, mandolin, spoons and piano. In order to occupy as many boys as possible on the playground, we had fourteen swings built near the tennis court and kept in good repair all the summer.

VOCATIONAL TRAINING

Shoe Department.

This division has been very active during the current year. We hired a new instructor and we now have three men in charge of fifteen apprentices, of whom twelve are full-time workers, working about five hours a day, with two half-holidays, Wednesday afternoon and Saturday afternoon. We generally keep two boys doing the same kind of work, changing them from time to time to give them a general training, and at the same time create a little variety in the work. A few alterations have been made in the shoe shop. A new electric system was installed at a cost of \$150, and other improvements were effected to facilitate the movements of the workers and thus increase the production: two cupboards were made; tables and shelves changed and put in the centre of the room at the reach of every one.

Shoe Making and Repairs.

Leather boots made	2,119
Hockey boots made	100
Hockey boots repaired	54
Leather boots repaired	1,624
Belts sewn and rivetted	225
Hockey pads repaired	22
Mittens sewn	24
Harness repaired	15
Leather braces made	30

Tailoring Division.

We have in this department one instructor and eighteen apprentices, out of that number seven are half-time workers, coming to the shop in the afternoon only. Most of the working hours were employed in mending the clothing of the pupils. At least 200 articles of clothing were mended and put in good shape, every week. Three former apprentices who learned their trade at the school work regularly, are earning \$15 a week. As usual some of the ladies of the village of Alired devoted a certain amount of time in mending the socks of the children.

We bought for this department a new Chandler Machine at a cost of \$55.

Articles made during the year :

Suits	60
Trousers	211
Night-shirts	84
Coats	48
Caps	35
Shirts	144
Sheets	240

Bookbinding and Printing.

Three apprentices are at present working in this department under an instructor every afternoon, but fourteen boys received there some training in bookbinding during the current year. They are credited with binding 150 books for the school library.

We also began to organize a printing shop under the same management. For this purpose we bought a second-hand printing-press, and the boys were kept busy putting all the letters and characters in good shape, and shortly after its acquisition, we made use of it to print the school paper, "The Guide".

Much help was frequently given the pupils by an experienced and very clever printer living in the village, a man ever ready to lend us a helping hand at any time his services were needed. As a consequence of the inauguration of this new department, some slight alterations had to be made in the Bookbinding and Printing Shop which kept the boys busy putting everything around in order.

Woodwork Report.

There are now five apprentices in that department, but twenty others worked there and received some training in woodworking before they were sent home at the expiration of their time in the school.

The projects made were :

- 1 ice-box, 6 ft. by 12 ft., for the summer camp.
- 24 Baseball bats.
- 50 Tool handles.
- 12 Checkerboards.
- 40 Small tables.
- 75 Stools for the dormitory.
- 12 Clothes racks.
- 75 Mops.
- 10 Cupboards.
- 3 Doors.
- 2 Hotbeds.
- 6 Pews.
- 60 Brushes.

Other activities included the repairing of 155 chairs, the partitioning of the wood-shop to make room for the basketry division and other modifications. The roof of the main building was renewed or repaired, a work of several days.

Metal Work.

Considerable repairs were made by this section for the year just ended to the main building and shops. Our instructor and his helper were kept busy doing all kinds of odd jobs in and around the house. They made :

- 14 Swings for the playground.
- 1 Cement coal bin.
- 21 Window screens.
- 8 Screen doors.
- 5 Trucks.

They painted the wood-shop and installed the heating system; modified the heating system of the shoe-shop. The hot-water system of the main building was completely renewed; toilets were placed in the new carpentry shop and a hot water reservoir was added in the shoe-shop. They also repaired: farm implements, lawn mowers, scrapers, shovels, pipes, radiators, chairs, sinks, ovens, garden tools and kitchen equipment. They distributed and fixed at different places in the main building 60 evaporation cans to secure the required humidity in the house in winter.

Dining-Hall Report.

Six boys work in the kitchen, serve as waiters in the dining-hall or work as general helpers in the washroom, vegetable or bread rooms. Boys interested in cooking were given practical training in the making of cookies, preparation of vegetables, cutting meat, and making bread. They helped the chef in making the bread for the whole house five times a week. Six boys were given employment in restaurants in and around Ottawa.

The products canned for home consumption amounted to :

Tomatoes	1,500 gallons
Beans	500 "
Chickens	34 "
Ham, cured and smoked.	700 pounds

Miscellanies.

Many visitors came to the school, people interested in the welfare of the inmates of the institution; and in many instances the boys gave a short entertainment in honour of the guests who came to visit them. We were favoured with the visit of two distinguished guests, their Excellencies the Archbishops Charbonneau of Montreal and A. Vachon of Ottawa. Most of the visitors came from those two cities, a few from the villages around Alfred. We like those visits because they give us an opportunity of training our boys in politeness and of giving them some directions about good behaviour in the presence of strangers.

On the request and at the invitation of one of our friends, the staff of our Training School paid several visits to two other training schools of the Province: St. John's, Toronto, and the Ontario Training School for Boys, at Bowmanville. At the training school in Bowmanville, three members of our personnel were invited to stay there a week each, the guests of the institution. We welcome this opportunity to thank the Department, the Superintendent and all the staff, either for their sympathetic assistance or their cordial hospitality which made us feel quite at home with the teachers as well as with the boys of this well-organized training school.

Agricultural Report.

Twenty-one boys worked on the school farm during the past year and were given farm training. Fourteen of those boys are now engaged as farm hands in the counties around our place.

Crops were generally good during the 1940 season. The root and potato harvests were above the average. We are building up a good herd of Holstein cows and all heifer calves are kept from the best cows for replacements. Seven of them are registered under Federal Inspection.

The boys are taught to milk, hitch and drive horses, work the farm implements, weed the garden and in general do all common farm jobs. As working on the farm tends to establish good working habits, we require that the boys put in a definite number of hours daily and stick to a job until it is finished.

Farm Products.

Potatoes	2,005 bags
Carrots	175 "
Beets	21 tons
Turnips	24 "
Corn and ensilage	63 "
Hay	36 "
Celery	1,500 heads
Cereals	1,850 bushels
Onions	16 bags
Tomatoes	1,680 gallons
Milk	7,373 "

Number of swine killed during the year, 28, weighing 8,954 pounds.

Sum of money given to the farm hands.....	\$1,500
Amount of money given to the boys.....	55.20

We bought thirty-three acres of good arable land at a cost of \$1,800 and a tractor costing \$1,300.

Animals.

Horses	3
Cattle	26
Swine	29

Maple Syrup.

The maple syrup season was rather short, but as usual the boys were permitted to have an outing at the sugar-bush, and take their lunch at the log-cabin, a treat enjoyed most cordially by all concerned. Ten parties, mostly from Ottawa, Hull and the towns around Alfred, came to the sugar-bush at least once during the season, and had a most enjoyable time there. Three boys helped the Brothers in charge, and made themselves useful in a general way. The season was very ordinary as we could get only 90 gallons of syrup as compared to the 200 gallons we obtained three years ago.

Gardening and Horticultural Report.

Trees were thinned out and trimmed in front of the Main Building. The perennial shrub at the front entrance was dug, trimmed and put in good shape early in the spring; and flowers were planted all around the west and north sides of the property. Three boys were assigned to this work during the summer. They got experience in planting flower beds, trimming shrubbery, transplanting plants and assorting perennials for filling the borders. Thus, as a consequence of their esthetic work, the general appearance of the landscape around the house was greatly improved.

The staff of teachers, supervisors and servants was increased during the past year, and is now totalling twenty-six men.
